# Monthly Report of Recent Economic and Financial Developments<sup>1</sup>

March 2015

## Summary

Japan's economy has continued its moderate recovery trend.

Overseas economies -- mainly advanced economies -- have been recovering, albeit with a lackluster performance still seen in part. In this situation, exports have been picking up. Business fixed investment has been on a moderate increasing trend as corporate profits have improved. Public investment has more or less leveled off at a high level. Private consumption as a whole has remained resilient against the background of steady improvement in the employment and income situation, although recovery in some areas has been sluggish. Housing investment, which continued to decline following the front-loaded increase prior to the consumption tax hike, has recently started to bottom out. Against the backdrop of these developments in demand both at home and abroad, industrial production has been picking up, due in part to the progress in inventory adjustments.

With regard to the outlook, Japan's economy is expected to continue its moderate recovery trend.

Exports are expected to increase moderately mainly against the background of the recovery in overseas economies. As for domestic demand, public investment is expected to enter a moderate declining trend, albeit maintaining a somewhat high level. Business fixed investment is projected to continue a moderate increasing trend as corporate profits follow their improving trend. Private consumption is expected to remain resilient with the employment and income situation continuing to improve steadily. Housing investment is projected to regain its resilience gradually. Reflecting these developments in demand both at home and abroad, industrial production is expected to increase moderately.

---

<sup>1</sup> This report is based on data and information available at the time of the Bank of Japan Monetary Policy Meeting held on March 16 and 17, 2015.

Meanwhile, risks to the outlook include developments in the emerging and commodity-exporting economies, the prospects regarding the debt problem and the risk of low inflation rates being protracted in Europe, and the pace of recovery in the U.S. economy.

On the price front, excluding the direct effects of the consumption tax hike, producer prices are declining relative to three months earlier, reflecting the significant fall in international commodity prices to date, and the year-on-year rate of increase in consumer prices (all items less fresh food) is in the range of 0.0-0.5 percent. Inflation expectations appear to be rising on the whole from a somewhat longer-term perspective.

With regard to the outlook, excluding the direct effects of the consumption tax hike, producer prices are expected to decline at a reduced pace for the time being, reflecting movements in international commodity prices, and the year-on-year rate of increase in consumer prices is likely to be about 0 percent for the time being, due to the effects of the decline in energy prices.

Financial conditions are accommodative.

The monetary base has increased significantly as asset purchases by the Bank of Japan have progressed, and the year-on-year rate of growth has been at around 35 percent.

Firms' funding costs have been hovering at low levels. With regard to credit supply, firms have continued to see financial institutions' lending attitudes as being on an improving trend. Issuing conditions for CP and corporate bonds have continued to be favorable. Firms' credit demand has been increasing moderately, mainly for working capital and funds related to mergers and acquisitions. Against this backdrop, the year-on-year rate of increase in the amount outstanding of bank lending has been at around 2.5 percent. The year-on-year rate of change in the amount outstanding of CP and corporate bonds has been negative. Firms' financial positions have been favorable. Meanwhile, the year-on-year rate of growth in the money stock has been at around 3.5 percent.

The weighted average of the overnight call rate has been below the 0.1 percent level, and interest rates on term instruments have been more or less unchanged. Compared with last month, stock prices have risen, while the value of the yen against the U.S. dollar has fallen. Meanwhile, long-term interest rates have remained at more or less the same level as last month.

## 1. Economic Developments

Public investment has more or less leveled off at a high level. The amount of public construction completed—which reflects the progress of public works—was flat in the fourth quarter last year on a quarter-on-quarter basis, after it continued to increase in the third quarter, following the rise in the second quarter mainly due to the effects of the supplementary budget for fiscal 2013 (Chart 5). The value of public works contracted—a measure that reflects public orders—registered a sharp quarter-on-quarter increase in the second quarter last year, assisted partly by the effects of the early implementation of the initial budget for fiscal 2014. It then fell back significantly in the third quarter and declined slightly in the fourth quarter as well, but it rose again in January-February relative to the fourth quarter.

Public investment is expected to enter a moderate declining trend, albeit maintaining a somewhat high level.<sup>2</sup>

Real exports have been picking up (Charts 6[1] and 7). They marked a slight increase in the third quarter last year, after declining slightly for two quarters in a row through the second quarter, and rose noticeably in the fourth quarter. Although exports in January also registered high growth relative to the fourth quarter, they may have jumped due to the effects of the timing of the Lunar New Year holidays (in China and other countries), in light of a surge in exports to East Asia including China. Looking at movements in exports by region (Chart 7[1]), exports to the United States—which decreased in the second quarter and leveled off in the third quarter—continued to increase markedly in both the fourth quarter on a quarter-on-quarter basis and January compared with the fourth quarter. With motor vehicles and their related goods starting to pick up, exports to the United States have moved moderately upward overall since capital goods and parts have recently increased, reflecting the recovery in business fixed investment in the United States. Exports to the EU—which dropped in the fourth quarter, after being roughly flat in the third quarter—turned upward in January relative to the fourth quarter. Exports to China—which increased slightly in the third quarter, after declining for two quarters

---

<sup>2</sup> Public construction, included in the "Emergency Economic Measures" based on the supplementary budget for fiscal 2014, is expected to underpin public investment in the future to a certain degree.

in a row through the second quarter—rose in the fourth quarter as well, mainly in IT-related goods. Although they increased significantly in January compared with the fourth quarter, the rise might have been affected by the aforementioned timing of the Lunar New Year holidays. Exports to NIEs have picked up markedly, mainly in IT-related goods and in capital goods and parts since last fall. Exports to ASEAN—which had remained somewhat sluggish—have finally begun to bottom out of late. Meanwhile, exports to Others have continued to increase moderately since the second quarter, mainly in capital goods and parts, supported in part by movements in foreign exchange rates. By goods (Chart 7[2]), exports of motor vehicles and their related goods have continued to be more or less flat with the fluctuations smoothed out. Exports of IT-related goods have picked up markedly, mainly in parts for smartphone products, supported partly by movements in foreign exchange rates. Exports of capital goods and parts have also increased moderately, against the backdrop of the recovery in business fixed investment in the United States and of the firmness in global IT-related demand. Exports of intermediate goods, including iron and steel as well as chemicals, had been somewhat weak until early last fall, mainly in those bound for East Asia, but they have recently moved upward.

Real imports have continued their moderate increasing trend mainly as a reflection of movements in domestic demand (Charts 6[1] and 9). Real imports fell back sharply in the second quarter last year in response to various declines in demand following the front-loaded increases, but they turned upward, albeit slightly, in the third quarter and rose in both the fourth quarter on a quarter-on-quarter basis and January relative to the fourth quarter. Looking at movements in imports by goods (Chart 9[2]), those of raw materials—which had continued to be relatively weak since last spring with the fluctuations smoothed out—increased sharply in January compared with the fourth quarter. In contrast, imports of consumer goods have been picking up since the third quarter with the fluctuations smoothed out, after declining noticeably in the second quarter due mainly to the effects of the decline in demand following the front-loaded increase prior to the consumption tax hike. Imports of IT-related goods—which had surged in the fourth quarter, partly due to the increase in imports of new smartphone products, after declining through the summer mainly due to the effects of the decline in demand following the front-loaded increase in line with the ending of support for some software (operating system)—fell back again in

January compared with the fourth quarter. Imports of capital goods and parts have continued to pick up as a trend, albeit with fluctuations, mainly as a reflection of developments in business fixed investment at home. Meanwhile, imports of intermediate goods declined, mainly as a reflection of movements in domestic production and in foreign exchange rates, for three consecutive quarters since the second quarter, but they turned upward in January relative to the fourth quarter.

Net exports—in terms of the real trade balance—have continued to improve, after bottoming in the first quarter last year (Chart 6[1]). Looking at movements in the nominal current account balance on a quarterly basis (Chart 6[2] and [3]), the current account balance returned to a surplus in the second quarter last year, mainly because of a subsequent decline in imports, in response to the front-loaded increase in demand, and maintained a similar amount of surplus in the third quarter. The surplus of the current account balance has continued to expand since the fourth quarter onward, due to (i) the ongoing surplus in primary income balance, (ii) the improvement in travel balance, and (iii) the improvement in trade balance as a result of the pick-up in exports and the decline in crude oil prices.

Regarding the environment surrounding exports, overseas economies—mainly advanced economies—have been recovering, albeit with a lackluster performance still seen in part (Chart 8[2]). Looking at movements by major region, the U.S. economy has continued to recover solidly, since the firmness in the household sector has been feeding through to the corporate sector. The slowdown in momentum for the recovery in the European economy since last spring has come to a standstill. As for the Chinese economy, stable growth has continued as a trend; however, growth momentum has continued to be sluggish, with downward pressure from an overhang in supply in the manufacturing sector and from adjustments in the real estate market. Emerging economies apart from China and the commodity-exporting economies have continued to lose pace as a whole. As for the exchange rate, the yen has remained significantly depreciated mainly against the U.S. dollar compared to a while ago; in terms of the real effective exchange rate, the yen has depreciated to the level last recorded in 1973, below that of around 2007 (Chart 8[1]).

Overseas economies, mainly advanced economies, are expected to continue recovering moderately. The aforementioned movements in foreign exchange rates are also projected to continue underpinning exports, including those of services such as travel. By major region, the U.S. economy is expected to continue a firm recovery centered on private demand. The European economy is projected to continue its recovery trend, albeit moderately, but attention should continue to be paid to such issues as the outcome of its debt problem, including the developments in Greece, and the effects of the slowdown in the Russian economy. As for the Chinese economy, stable growth will continue, but the growth rate is projected to be somewhat lowered. Growth in emerging economies apart from China and the commodity-exporting economies might lose pace for a protracted period, although the recovery in advanced economies is basically expected to exert positive effects gradually.

Taking the above into consideration, exports are expected to increase moderately mainly against the background of the recovery in overseas economies. Imports are projected to continue their moderate increasing trend, largely as a reflection of movements in domestic demand, although movements in foreign exchange rates are expected to exert downward pressure on imports. Considering these developments in exports and imports, net exports are projected to be on a moderate improving trend, albeit with fluctuations.

Business fixed investment has been on a moderate increasing trend as corporate profits have improved. According to the *Financial Statements Statistics of Corporations by Industry, Quarterly*, business fixed investment in nominal terms has continued to increase moderately, albeit with fluctuations (Chart 10[1]). Looking at recent movements by industry (Chart 11), business fixed investment for manufacturing has trended noticeably upward, while that for nonmanufacturing has been more or less flat on the whole. The aggregate supply of capital goods—a coincident indicator of machinery investment—on a basis excluding transport equipment exhibited somewhat high growth in January compared with the fourth quarter last year, after increasing firmly in the fourth quarter for the first time in three quarters; these movements show that the uptrend has recently become evident (Chart 12[1]). As for leading indicators, machinery orders (private sector, excluding orders

for ships and those from electric power companies)—a leading indicator of machinery investment—have been on a moderate uptrend since the third quarter last year, notably in manufacturing, after falling back somewhat significantly in the second quarter from the increase in the previous quarter (Chart 13[1]). Machinery orders of nonmanufacturing—which had continued to be relatively weak since last spring—registered positive growth in January relative to the fourth quarter. Construction starts (floor area, private, nondwelling use)—a leading indicator of construction investment—had shown some weakness since the start of last year, mainly in nonmanufacturing, but they have been more or less flat since the middle of last year, with the fluctuations smoothed out (Chart 13[2]).

Regarding the environment surrounding business fixed investment, corporate profits have continued to improve. According to the *Financial Statements Statistics of Corporations by Industry, Quarterly* (Chart 10[2]), the ratio of current profits to sales recorded a historical high in the fourth quarter last year for all industries and company sizes. By industry and company size, the ratio of current profits for large manufacturing firms recorded a historical high for two consecutive quarters, assisted mainly by strong overseas performance and movements in foreign exchange rates; the ratio for medium-sized and small manufacturing firms improved moderately as well in line with the pick-up in production.<sup>3</sup> As for nonmanufacturing, the ratio of current profits to sales has stayed at a high level, but improvement has been slow compared with manufacturing due to sluggishness in private consumption after the consumption tax hike. As for the outlook, corporate profits are projected to continue an improving trend, supported by the increase in domestic and foreign demand as well as by the decline in crude oil prices and movements in foreign exchange rates.

Taking the above into consideration, business fixed investment is projected to continue a moderate increasing trend as corporate profits follow their improving trend.

Private consumption as a whole has remained resilient against the background of steady improvement in the employment and income situation, although recovery in

---

<sup>3</sup> The ratio of current profits to sales has recently shown relatively strong movements compared with that of operating profits. Factors such as an increase in dividends received from overseas subsidiaries are considered to have underpinned profits to some degree.

some areas has been sluggish (Chart 14). Looking at consumption of goods—as seen through sales at retail stores in real terms (Chart 15[1])—it fell substantially in the second quarter last year on a quarter-on-quarter basis due to the effects of the decline in demand following the front-loaded increase, but it has tended to pick up moderately since the third quarter, albeit with fluctuations, as the effects of the subsequent decline in demand have been dissipating. Meanwhile, looking at consumption of durable consumer goods (Chart 15[2]), the number of new passenger-car registrations almost bottomed out in the third quarter, despite falling substantially in the second quarter due to the effects of the decline in demand following the front-loaded increase. Since then, it has shown some signs of picking up, albeit with large fluctuations of small cars.<sup>4</sup> Sales of household electrical appliances in real terms decreased significantly in the second quarter, due to the decline following (i) the front-loaded demand in line with the consumption tax hike and (ii) the renewal demand for PCs in line with the ending of support for some software, but sales have tended to pick up at a moderate pace since the third quarter, albeit with fluctuations, mainly due to increased sales of smartphone products and those to foreign visitors to Japan. Sales at department stores have been on an improving trend supported by the pick-up in demand following the subsequent decline and the wealth effects as a result of the rise in stock prices as well as in part by increased sales to foreign visitors to Japan (Chart 16[1]). Sales at supermarkets—which had been picking up moderately until fall last year—have shown relatively weak movements, with a decline in sales in both the fourth quarter on a quarter-on-quarter basis and January relative to the fourth quarter. Sales at convenience stores have continued to show their moderate increasing trend. Meanwhile, as for consumption of services (Chart 16[2]), outlays for travel have been steady on the whole, aided by the firmness in domestic travel, despite some weakness in overseas travel that were affected partly by movements in foreign exchange rates. Sales in the food service industry have remained steady as a trend, disregarding the effects of issues related to contamination of some food items and other factors.

As for statistics on the demand side, consumption expenditure in the *Family Income and Expenditure Survey* (in real terms; two-or-more-person households)

---

<sup>4</sup> Sales of small cars with engine sizes of 660cc or less registered somewhat high growth in the fourth quarter due in part to aggressive sales promotions by the automobile industry, but they fell back sharply in January-February in response to these movements relative to the fourth quarter.

shows that the index on an "excluding housing, purchase of vehicles, money gifts and remittance" basis (Chart 15[1])—which is compiled so as to make it similar to items used for estimating GDP—bottomed out in the third quarter last year, after falling back sharply in the second quarter from the front-loaded increase in demand, and has tended to pick up moderately since the fourth quarter, with the fluctuations smoothed out. The total expenditure in the *Survey of Household Economy* (in real terms; two-or-more-person households) has continued to be more or less flat since the summer, after decreasing significantly in the second quarter in response to the front-loaded increase in demand, notably in durable consumer goods.

Looking at indicators related to consumer confidence, the consumer confidence index—which had become cautious since the summer last year—has recently shown signs of picking up (Chart 17).

Private consumption is expected to remain resilient with the employment and income situation continuing to improve steadily.

Housing investment, which continued to decline following the front-loaded increase prior to the consumption tax hike, has recently started to bottom out. The number of housing starts—a leading indicator of housing investment—continued to fall back since the first quarter last year due to the decline in demand following the front-loaded increase, mainly in owner-occupied houses, but it has almost leveled off since the middle of last year (Chart 18[1]).

Housing investment is projected to regain its resilience gradually with the employment and income situation continuing to improve steadily, also supported by accommodative financial conditions.

Industrial production has been picking up, due in part to the moderate increase in demand both at home and abroad as well as to the progress in inventory adjustments (Chart 19). Industrial production—which had continued to decrease in the third quarter last year after falling back noticeably in the second quarter from the front-loaded increase in demand—turned upward in the fourth quarter and increased

significantly in January relative to the fourth quarter.<sup>5</sup> This pick-up in production is attributable to the progress in inventory adjustments in durable consumer goods (automobiles and household electrical appliances) and construction goods triggered by the decline in demand following the front-loaded increase. In addition, the recent rise in exports has also facilitated the pick-up in production. Looking at quarterly movements by industry, production of transport equipment turned upward in the fourth quarter, albeit marginally, following noticeable decreases for two quarters in a row in the second and third quarters in light of continued inventory adjustments in line with the decline in demand following the front-loaded increase. It registered a relatively large increase in January compared with the fourth quarter. Inventories have declined noticeably amid a moderate increase in shipments, mainly to North America, and firms' inventory adjustment phase has almost come to an end at this stage, with the exception of small cars. Production of electrical machinery and of information and communication electronics equipment—which continued to register a sizeable decline since early last spring, mainly due to the effects of the decline in household electrical appliances (air conditioners and PCs) in response to prior increases—has recently started to pick up. Meanwhile, production of general-purpose, production and business oriented machinery has continued a moderate increasing trend, albeit with fluctuations, in light of developments in business fixed investment at home and abroad; January also saw an upsurge mainly in semiconductor manufacturing equipment. Production of electronic parts and devices has also continued a marked increase, primarily in parts for smartphone products produced in Asia, supported by movements in foreign exchange rates.

Shipments, like production, continued to decline in the second and third quarters last year, but they turned upward in the fourth quarter and increased significantly in January relative to the fourth quarter (Chart 19[1]). By goods, although the recovery in shipments of construction goods has remained sluggish, shipments of durable consumer goods have bottomed out and shown some signs of picking up; those of producer goods (mainly electronic parts and devices) and capital goods have moved up steadily.

---

<sup>5</sup> Similar to the situation in exports, the upsurge in January's industrial production and shipments (mentioned later on) may have been affected by the timing of the Lunar New Year holidays.

Inventories have recently declined moderately, although they are still at a somewhat high level (Chart 19[1]). Recent movements show that inventories were almost flat as of the end of December last year compared with the end of September, after building up for two quarters in a row until the end of September, and they dropped slightly as of the end of January relative to the end of December. On a monthly basis, inventories fell for two months in a row in December and January. As for the shipment-inventory balance (year-on-year rate of change in shipments less that in inventories), growth in inventories has marginally outpaced that in shipments on the whole, partly in response to the increase in demand prior to the consumption tax hike in the previous year (Chart 20[2]).<sup>6</sup> By goods, growth in inventories of durable consumer goods and construction goods has outpaced that in shipments, whereas growth in inventories of capital goods, nondurable consumer goods, and producer goods has been generally balanced with that in shipments.

Reflecting these developments in demand both at home and abroad, industrial production is expected to increase moderately. Based on anecdotes by firms and on other information, industrial production is projected to continue increasing in the first quarter. By industry, production of transport equipment is expected to increase with domestic inventory adjustments having come to an end as well as with favorable demand in North America. Production of general-purpose, production and business oriented machinery is also projected to keep moving firmly upward as a reflection of developments in business fixed investment at home and abroad. Production of electronic parts and devices is projected to maintain its moderate growth even after the noticeable increase in the previous quarter, assisted in part by the effects of movements in foreign exchange rates, in light of firm final demand for smartphones. As for the second quarter, large uncertainty exists, but it seems that production will maintain its uptrend, albeit at a diminished pace. By industry, production of general-purpose, production and business oriented machinery is projected to keep moving moderately upward as a reflection of developments in business fixed investment at home and abroad. It seems that production of electronic parts and devices will maintain a relatively high production level, mainly on the back of firm

---

<sup>6</sup> As for the shipment-inventory balance, growth in shipments on a year-on-year basis tends to be somewhat low and that in inventories to be somewhat high in the second half of fiscal 2014, due to the front-loaded increase in demand prior to the consumption tax hike in the second half of fiscal 2013.

final demand, after increasing for three consecutive quarters until the first quarter. Meanwhile, production of transport equipment is expected to be more or less flat with the recovery following inventory adjustments coming to a halt.

As for the employment and income situation, supply and demand conditions in the labor market have continued to improve steadily, and employee income has increased moderately.

As for supply and demand conditions in the labor market, the unemployment rate stood at 3.6 percent in January, after falling down to 3.4 percent in December last year, a level last seen in August 1997, but it has been on a moderate improving trend, albeit with fluctuations (Chart 21). New job openings had ceased to improve as a reflection of economic activity during the first half of this fiscal year, but they have been moving steadily upward again since the fourth quarter. Amid these movements, the ratio of new job openings has been on a clear uptrend, owing partly to the decline in new applications; it recorded 1.77 in December and January, the highest level since February 1992. As for the active job openings-to-applicants ratio, the pace of improvement turned tentatively sluggish up until early fall, but the improving trend has recently become evident again; it recorded 1.14 in December and January, a high level on par with that in April 1992. Non-scheduled hours worked—which had been more or less flat since last spring, as a reflection of economic activity—have recently started to pick up. Looking at recent movements by industry, manufacturing has shown an increase again as a reflection of the pick-up in production activity; nonmanufacturing—which had continued to be somewhat weak until the year-end—also saw an upturn in January.

In terms of employment, the year-on-year rate of increase in the number of employees in the *Labour Force Survey* has been moving in the range of 0.5 percent to around 1.0 percent on average, despite large monthly fluctuations (Chart 23[1]). The number of regular employees in the *Monthly Labour Survey* has continued to register somewhat high growth, moving in the range of 1.5-2.0 percent.

Total cash earnings per employee have risen moderately, albeit with fluctuations (Chart 23[2]). Hourly cash earnings of overall employees have also

been on a moderate improving trend as a whole (Chart 22[1]). Taking a closer look, both monthly cash earnings of full-time employees per employee and hourly cash earnings of part-time employees have accelerated their year-on-year rates of increase at a moderate pace, albeit with fluctuations (Chart 22[2]). Looking at scheduled cash earnings on a year-on-year basis, those of part-time workers have recently registered a slight negative on the back of the decline in the number of hours worked. As a whole, however, scheduled cash earnings have been picking up with downward pressure from the increase in the ratio of part-time workers having diminished moderately, while scheduled cash earnings of full-time employees have been on a positive trend mainly due to the effects of the rise in base wages last spring (Chart 22[3]). The year-on-year rate of increase of non-scheduled cash earnings had been diminishing since last spring, as a reflection of movements in the number of hours worked, but they have recently shown a pick-up. Meanwhile, special cash earnings in November-January (preliminary figures)—which corresponds to winter bonuses—showed a solid increase of positive 2.4 percent on a year-on-year basis in both manufacturing and nonmanufacturing, although they grew at a reduced rate compared with summer bonuses (a year-on-year increase of 4.3 percent for the June-August period).

Employee income has risen moderately, as a reflection of the aforementioned developments in employment and wages (Chart 23[3]).

As for the outlook, employee income is expected to continue increasing moderately, in line with the recovery in economic activity and business performance.

## **2. Prices**

International commodity prices have almost bottomed out recently, after continuing to fall significantly since the summer last year (Chart 25[1] and [3]). Prices of crude oil—which had continued to decline sharply in light of the slack in supply and demand conditions worldwide—have somewhat bounced back up of late, mainly in view of the decline in the number of oil drilling rigs in the United States, despite ongoing downward pressure from the pile-up in inventories of crude oil. Prices of nonferrous metals have continued to be soft, mainly in view of the possible

downward revision of growth in emerging economies including China. Meanwhile, prices of grains—which had been rising toward the year-end—have recently fallen back, due in part to a good harvest forecast in the United States.

Import prices (on a yen basis) are declining sharply relative to three months earlier, as a reflection of the significant fall in international commodity prices to date (Chart 25[2]).

Producer prices (adjusted to exclude the effects of seasonal changes in electricity rates, same hereafter), on a basis excluding the direct effects of the consumption tax hike, are declining relative to three months earlier, reflecting the significant fall in international commodity prices to date (Chart 26[2]).<sup>7</sup> Excluding the direct effects of the consumption tax hike, the three-month rate of change in producer prices stood at negative 1.9 percent in February, declining at almost the same pace as that in January. Looking in detail at producer price movements in February relative to three months earlier, prices of "goods sensitive to exchange rates and overseas commodity prices" continued to post a large negative, mainly due to price declines in petroleum products such as gasoline and naphtha, which is a reflection of the decline in crude oil prices to date. Prices of "other materials" and "iron & steel and construction goods" continued to decline as well, chiefly in chemicals & related products, iron & steel, and scrap & waste, due to the effects of the fall in international commodity prices to date and partly to the deterioration of supply and demand conditions in Asia. Prices of "others"—which had continued to decline moderately—were more or less flat in February, partly since polished rice and brown rice bottomed out. Meanwhile, prices of "machinery" have continued to be more or less flat with the fluctuations smoothed out.

The year-on-year rate of increase in services producer prices (excluding international transportation; year-on-year basis, same hereafter), on a basis excluding the direct effects of the consumption tax hike, has been moving in the range of 0.5-1.0

---

<sup>7</sup> Figures are adjusted to exclude large seasonal fluctuations in electric power charges to observe the underlying changes in producer prices. Industrial and commercial electric power charges are set relatively high during July-September, when electric power consumption increases substantially.

percent (Chart 27). Looking in detail at recent services producer price movements, the year-on-year rate of change in prices related to "selling, general and administrative expenses" has been rising slightly as a whole, since (i) advertising services have been on a positive trend, albeit with fluctuations, (ii) temporary employment agency services have continued to be positive on the back of tightening supply and demand conditions in the labor market, and (iii) hotel services have registered a relatively large increase in light of firm demand from business and sightseeing. The rate of increase in prices related to "fixed investment" has tended to expand, mainly in civil engineering and architectural services. The rate of change in prices related to "domestic transportation" has been somewhat elevated, mainly in overland freight transportation and in warehousing and other transportation services. Prices of "others" have continued to register somewhat high growth since August last year, together with the price increase in domestic air passenger transportation, as finance and insurance (mainly motor vehicle insurance) has continued to show relatively strong movements. Meanwhile, the rate of change in prices of "real estate services" including office space rental—which had been slightly positive since July—has more or less leveled off recently on a year-on-year basis, partly in response to the previous year's price increase.

The year-on-year rate of increase in consumer prices (all items less fresh food; year-on-year basis, same hereafter), on a basis excluding the direct effects of the consumption tax hike, is in the range of 0.0-0.5 percent (Chart 28[1]).<sup>8</sup> Consumer prices for January, on a basis excluding the direct effects of the consumption tax hike, narrowed their rate of increase to positive 0.2 percent from positive 0.5 percent in December last year on a less fresh food basis. On a basis excluding food and energy, the rate of increase stood at positive 0.4 percent in January, on par with that in November and December. Regarded as a method for capturing trend changes, the year-on-year rate of increase in the trimmed mean had been on a diminishing trend

---

<sup>8</sup> For details on the direct effects of the consumption tax hike (estimates), see BOX in the *Monthly Report of Recent Economic and Financial Developments*, March 2014.

after the peak in June, but January saw a marginal rate of improvement from December (Chart 29[2]).<sup>9</sup>

Looking at recent year-on-year growth in consumer prices, prices for goods (excluding agricultural, aquatic & livestock products) have continued to reduce their rate of increase since the summer last year; they turned negative in January for the first time since June 2013. Looking in detail, prices of petroleum products continued to reduce their year-on-year rate of increase since the summer as a reflection of the decline in crude oil prices. They turned negative in November and have continued to expand their rate of decline since then. Prices of food products—which had continued to be somewhat strong on the back of past cost increases in the form of higher prices—have narrowed their rate of increase marginally compared to a while ago in light of sluggishness in some areas in private consumption. Prices of durable goods have also recently been negative, mainly in air conditioners, due to the effects of movements in private consumption after the consumption tax hike and in response to the previous year's increase. Prices of clothes—which had continued to be relatively weak since fall—somewhat expanded their rate of increase in January. Meanwhile, prices of agricultural, aquatic & livestock products (less fresh food) have tended to reduce their rate of increase overall, albeit marginally, as a reflection of the decline in prices of rice, despite upward pressure from prices of meats. Prices of general services have more or less leveled off since June on a year-on-year basis. Looking in detail, prices of hotel charges have been on a positive trend, albeit with fluctuations, and in addition, prices of various services—including those related to housing construction—have expanded their rate of increase moderately on the back of the rise in wages. Prices of meals outside the home also somewhat expanded their rate of increase in January, assisted in part by the effects of some price increases. On the other hand, the introduction of new price plans for mobile telephone charges since June and the reduction in some prices of meals outside the home last spring have been exerting downward pressure on a year-on-year basis. Prices of package tours to overseas, despite large monthly fluctuations, have also recently tended to reduce their rate of increase, due in part to the effects of the weakness in overseas travel in line

---

<sup>9</sup> The trimmed mean is obtained by systematically discarding a certain percentage of the highest and lowest marks of the price fluctuation distribution by item to eliminate large relative price fluctuations.

with movements in foreign exchange rates. Meanwhile, the year-on-year rate of decline in prices of rent—which accounts for a large share of general services—has tended to narrow, albeit very moderately, from a somewhat longer-term perspective. Fees for public services have been narrowing their rate of increase as a trend, as a reflection of energy-related movements against the backdrop of the decline in crude oil prices. Recently, however, the year-on-year rate of increase has moved upward due to the effects of the decline in electricity prices in response to the previous year's increase and to another round of price increases by one electric power company. As a result, the year-on-year rate of increase of fees for public services as a whole has accelerated marginally.

With regard to the outlook, excluding the direct effects of the consumption tax hike, producer prices are expected to decline at a reduced pace for the time being, reflecting movements in international commodity prices, and the year-on-year rate of increase in consumer prices is likely to be about 0 percent for the time being, due to the effects of the decline in energy prices.

Meanwhile, inflation expectations appear to be rising on the whole from a somewhat longer-term perspective (Chart 30).

### **3. Financial Developments**

#### **(1) Corporate Finance and Monetary Aggregates**

The monetary base (average amounts outstanding) has increased significantly as asset purchases by the Bank of Japan have progressed, and the year-on-year rate of growth has been at around 35 percent (Chart 31).

Firms' funding costs have been hovering at low levels. Issuance rates on CP and those on corporate bonds have been at low levels. The average contract interest rates on new loans and discounts have also been low (Chart 33).

With regard to credit supply, firms have continued to see financial institutions' lending attitudes as being on an improving trend (Chart 32). Issuing conditions for

CP and corporate bonds have continued to be favorable. In these circumstances, as for funding of the private sector, the year-on-year rate of increase in the amount outstanding of bank lending has been at around 2.5 percent, mainly in demand for working capital and funds related to mergers and acquisitions (Chart 34). The year-on-year rate of change in the amount outstanding of CP and corporate bonds has been negative (Chart 35).

Firms' financial positions have been favorable (Chart 32). The number of corporate bankruptcies has remained at a low level (Chart 37).

Meanwhile, the year-on-year rate of growth in the money stock (M2) has been at around 3.5 percent. Its February reading was 3.5 percent on a year-on-year basis, following 3.4 percent in January (Chart 36).<sup>10</sup>

## **(2) Financial Markets**

In Japan's money markets, interest rates have been stable at low levels, including those for longer term rates. The overnight call rate (uncollateralized) has been below the 0.1 percent level. Regarding interest rates on term instruments, the T-Bill rate (3-month) has generally been at around 0 percent. The Euroyen interest rate (3-month) and interest rates on Euroyen futures have both been virtually level (Chart 38). In U.S. dollar funding, the LIBOR-OIS spread for the dollar has basically been flat (Chart 39).

Yields on 10-year government bonds (newly issued 10-year JGB) have been more or less flat; they are recently moving in the range of 0.40-0.45 percent (Chart 40).

Yield spreads between corporate bonds and government bonds have been more or less flat at low levels (Chart 41).

---

<sup>10</sup> On an M3 basis, which includes the Japan Post Bank, the year-on-year rate of growth has been at around 3 percent; its February reading was 2.9 percent, following 2.8 percent in January. The year-on-year rate of growth in broadly-defined liquidity (L) has recently been at around 3.5 percent; it increased by 3.5 percent in February, following an increase of 3.4 percent in January.

Stock prices have risen, primarily as a reflection of solid Japanese corporate earnings and of the yen's depreciation against the U.S. dollar. The Nikkei 225 Stock Average is recently moving in the range of 19,000-19,500 yen (Chart 42).

In the foreign exchange market, the yen's exchange rate has depreciated against the U.S. dollar, mainly in response to some stronger-than-projected U.S. economic indicators; the yen is currently moving in the range of 121-122 yen against the U.S. dollar. The yen's exchange rate has appreciated against the euro, partly since ECB began purchasing government bonds; the yen is recently moving in the range of 128-129 yen against the euro (Chart 43).

## Real GDP and Indexes of Business Conditions

## (1) Real GDP

## (2) Components

s.a.; q/q % chg.

	2013	2014			
	Q4	Q1	Q2	Q3	Q4
Real GDP	-0.3	1.3	-1.6	-0.7	0.4
[Annual rate]	[-1.2]	[5.1]	[-6.4]	[-2.6]	[1.5]
Domestic demand	0.2	1.6	-2.7	-0.7	0.2
Private demand	0.2	1.7	-2.8	-0.8	0.1
Private consumption	-0.1	1.3	-3.1	0.2	0.3
Non-Resi. investment	0.2	0.8	-0.7	-0.0	-0.0
Residential investment	0.1	0.1	-0.3	-0.2	-0.0
Private inventory	0.0	-0.5	1.4	-0.8	-0.2
Public demand	0.1	-0.2	0.1	0.1	0.1
Public investment	0.0	-0.1	0.1	0.1	0.0
Net exports of goods and services	-0.5	-0.3	1.1	0.1	0.2
Exports	-0.0	1.1	-0.1	0.3	0.5
Imports	-0.5	-1.3	1.1	-0.2	-0.3
Nominal GDP	-0.1	1.4	0.3	-0.9	1.0

Note: Figures of components in real GDP indicate contributions to changes in GDP.

## (3) Indexes of Business Conditions (Composite Indexes)

Note: Shaded areas indicate recession periods.

Source: Cabinet Office, "National Accounts," "Indexes of Business Conditions."

GDP Deflator and Income Formation

(1) GDP Deflator

(2) Domestic Demand Deflator

(3) Aggregate Income Formation

Notes: 1. Figures of components indicate contributions to changes in real GNI.

2. Real GNI = real GDP + trading gains/losses + net income from the rest of the world

Trading gains/losses = nominal net exports / weighted average of export and import deflators - real net exports

Source: Cabinet Office, "National Accounts."

## Public Investment

## (1) Amount of Public Construction Completed and Public Investment

## (2) Value of Public Works Contracted

Notes: 1. Quarterly figures of public investment are plotted at the middle month of each quarter.

2. The amount of public construction completed is based on the general tables in the "Integrated Statistics on Construction Works."

3. Figures of the value of public works contracted and the amount of public construction completed are seasonally adjusted by X-12-ARIMA. As figures of the amount of public construction completed are seasonally adjusted on a monthly basis, the data are retroactively revised every month.

Sources: Cabinet Office, "National Accounts";

East Japan Construction Surety etc., "Public Works Prepayment Surety Statistics";

Ministry of Land, Infrastructure, Transport and Tourism, "Integrated Statistics on Construction Works."

External Balance <sup>1</sup>

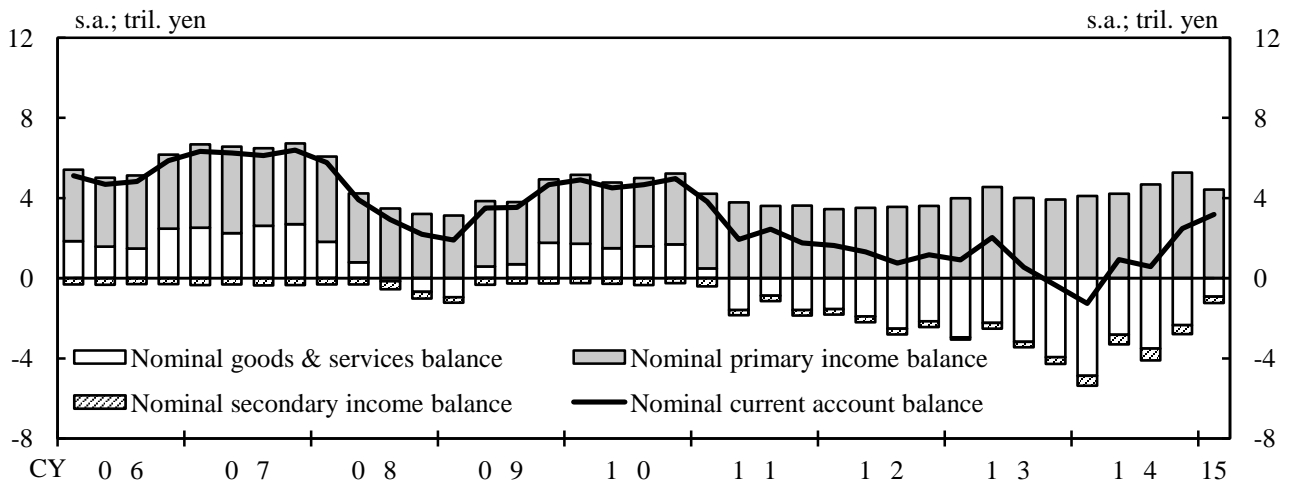

(1) Real Exports, Real Imports, and Real Trade Balance <sup>2</sup>

(2) Nominal Exports, Nominal Imports, and Nominal Trade Balance <sup>3</sup>

(3) Nominal Current Account Balance and Nominal Goods & Services Balance <sup>3</sup>

Notes: 1. Seasonally adjusted by X-12-ARIMA. 2015/Q1 figures are January figures converted into quarterly amount.  
 2. Real exports/imports are the value of exports and imports in the "Trade Statistics" deflated by the "Export and Import Price Index." "Real trade balance" is defined as real exports minus real imports.  
 3. Figures are based on the "Balance of Payments."

Sources: Ministry of Finance, "Trade Statistics"; Ministry of Finance and Bank of Japan, "Balance of Payments"; Bank of Japan, "Corporate Goods Price Index."

Real Exports <sup>1</sup>

## Real Effective Exchange Rate and Overseas Economies

## (1) Real Effective Exchange Rate (Monthly Average)

Notes: 1. Figures are based on the broad index of the BIS effective exchange rate, and those prior to 1994 are calculated using the narrow index.

2. Figures for February and March (up to March 13) 2015 have been calculated using the monthly average of the BOJ's nominal effective exchange rate (the Yen Index).

## (2) Real GDP Growth Rates of Overseas Economies

s.a., ann., q/q % chg.

	CY2012	2013	2014	2014 Q1	Q2	Q3	Q4
United States <sup>1</sup>	2.3	2.2	2.4	-2.1	4.6	5.0	2.2
European Union <sup>2</sup>	-0.5	0.0	1.3	1.5	0.8	1.3	1.6
Germany <sup>1</sup>	0.4	0.1	1.6	3.1	-0.3	0.3	2.8
France <sup>1</sup>	0.4	0.4	0.4	-0.1	-0.5	1.1	0.3
United Kingdom <sup>1</sup>	0.7	1.7	2.6	2.7	3.0	2.6	2.2

China <sup>1</sup>	7.7	7.7	7.4	6.6	7.8	7.8	6.1
NIEs <sup>1,3</sup>	2.3	3.0	3.1	2.4	1.4	4.3	2.8
ASEAN4 <sup>1,3,4</sup>	6.2	4.4	3.3	-0.6	5.7	4.5	7.7
Main economies <sup>3</sup>	3.7	3.7	3.7	1.8	4.1	4.9	3.9

Notes: 1. Figures for each country are based on those released by the government or central bank. Quarterly figures for China are annualized based on quarter-on-quarter changes released by the National Bureau of Statistics of China.

2. Figures are based on those released by the European Commission.

3. Figures are averages of members' real GDP growth rates, weighted by the value of exports from Japan to each country or region.

The members are described below.

Main economies: United States, European Union, and East Asia

East Asia: China, NIEs, and ASEAN4

NIEs: Korea, Taiwan, Hong Kong, and Singapore

ASEAN4: Thailand, Indonesia, Malaysia, and Philippines

4. To calculate the quarterly figures, real GDP growth rates of a member country are seasonally adjusted by the Bank of Japan using X-12-ARIMA.

Real Imports <sup>1</sup>

- Notes: 1. Seasonally adjusted by X-12-ARIMA. 2015/Q1 figures are January figures converted into quarterly amount.  
2. Shares of each region and goods in 2014 are shown in angle brackets.  
3. Data of four members: Thailand, Indonesia, Malaysia, and Philippines.  
4. Raw materials are mainly composed of woods, ores, and mineral fuels.  
5. Excludes foodstuffs.  
6. IT-related goods are composed of computers and units, parts of computers, telecommunication machinery, ICs, audio and visual apparatus, and medical and optical instruments.  
7. Excludes IT-related goods.

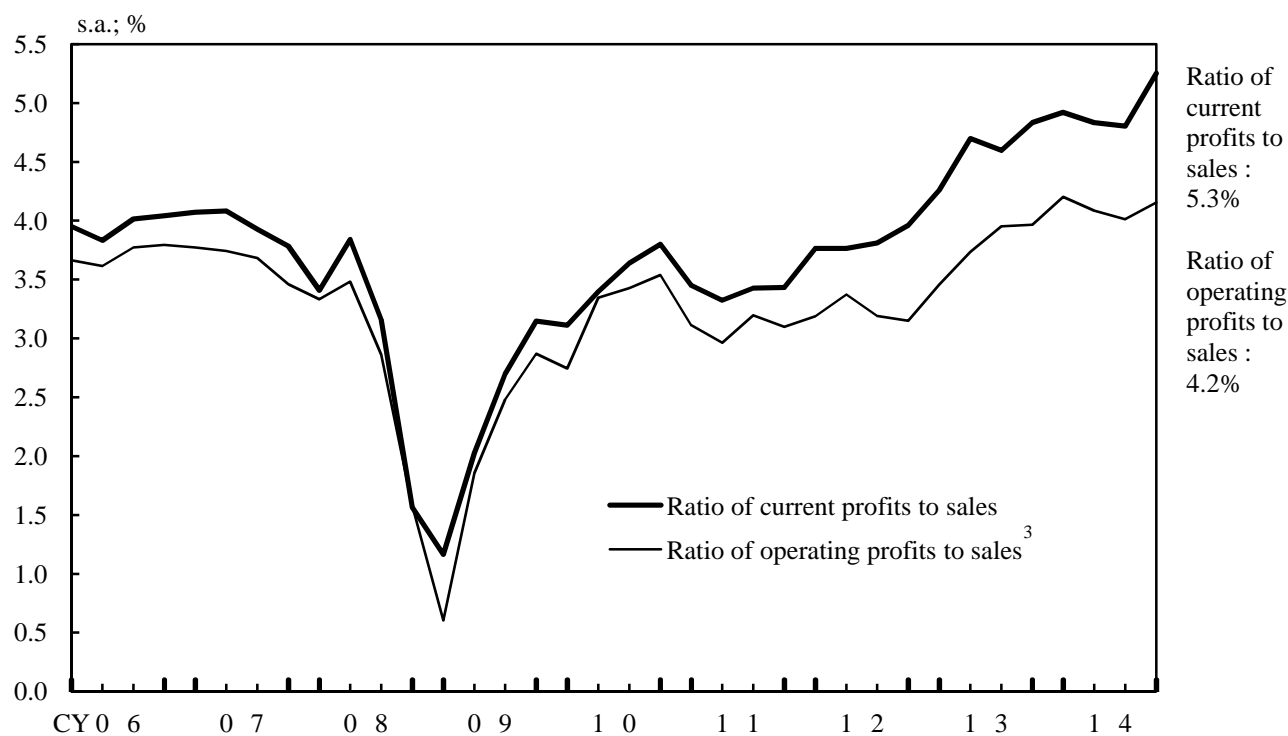

Business Fixed Investment and Corporate Profits

(1) Business Fixed Investment

(2) Corporate Profits (Ratio of Profits to Sales)<sup>1,2</sup>

Notes: 1. All enterprises excluding "Finance and Insurance."

2. Based on the "Financial Statements Statistics of Corporations by Industry, Quarterly."

3. Figures are seasonally adjusted by X-12-ARIMA.

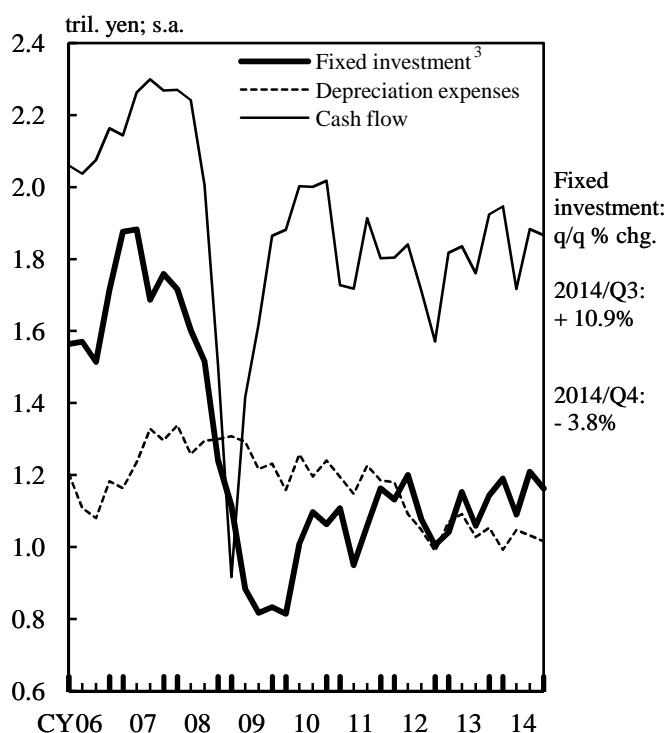

Sources: Cabinet Office, "National Accounts"; Ministry of Finance, "Financial Statements Statistics of Corporations by Industry, Quarterly."

Business Fixed Investment by Industry and Size

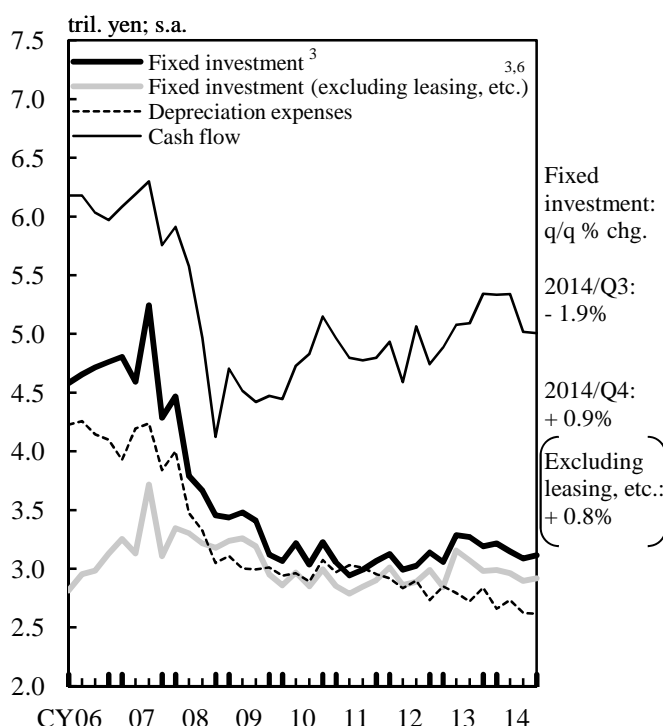

(1) Large Manufacturing Firms

(2) Medium-Sized and Small Manufacturing Firms

(3) Large Nonmanufacturing Firms

(4) Medium-Sized and Small Nonmanufacturing Firms

Notes: 1. "Large firms" refers to firms with capital stock of 1 billion yen or more, and "medium-sized and small firms" refers to firms with capital stock of 10 million or more but less than 1 billion yen.

2. Cash flow = current profits / 2 + depreciation expenses.

3. Excluding software investment.

4. Seasonally adjusted by X-12-ARIMA.

5. Excluding "Finance and Insurance."

6. Excluding "Goods rental and Leasing."

Source: Ministry of Finance, "Financial Statements Statistics of Corporations by Industry, Quarterly."

## Coincident Indicators of Business Fixed Investment

## (1) Aggregate Supply and Shipments of Capital Goods

Note: Figures for 2015/Q1 are those of January.

## (2) Indices of Capacity Utilization and Production Capacity DI

Notes: 1. Production capacity DIs are those of all enterprises.

2. The figure for 2015/Q1 is that of January.

Sources: Ministry of Economy, Trade and Industry, "Indices of Industrial Production," "Indices of Industrial Domestic Shipments and Imports";  
Bank of Japan, "*Tankan*, Short-term Economic Survey of Enterprises in Japan."

Leading Indicators of Business Fixed Investment

(1) Machinery Orders

Notes: 1. Volatile orders: Orders for ships and those from electric power companies.  
 2. Figures for 2015/Q1 are those of January in the quarterly amount.

(2) Construction Starts (Floor Area, Private, Nondwelling Use)

Notes: 1. Seasonally adjusted by X-12-ARIMA.  
 2. Figures for 2015/Q1 are those of January in the quarterly amount.

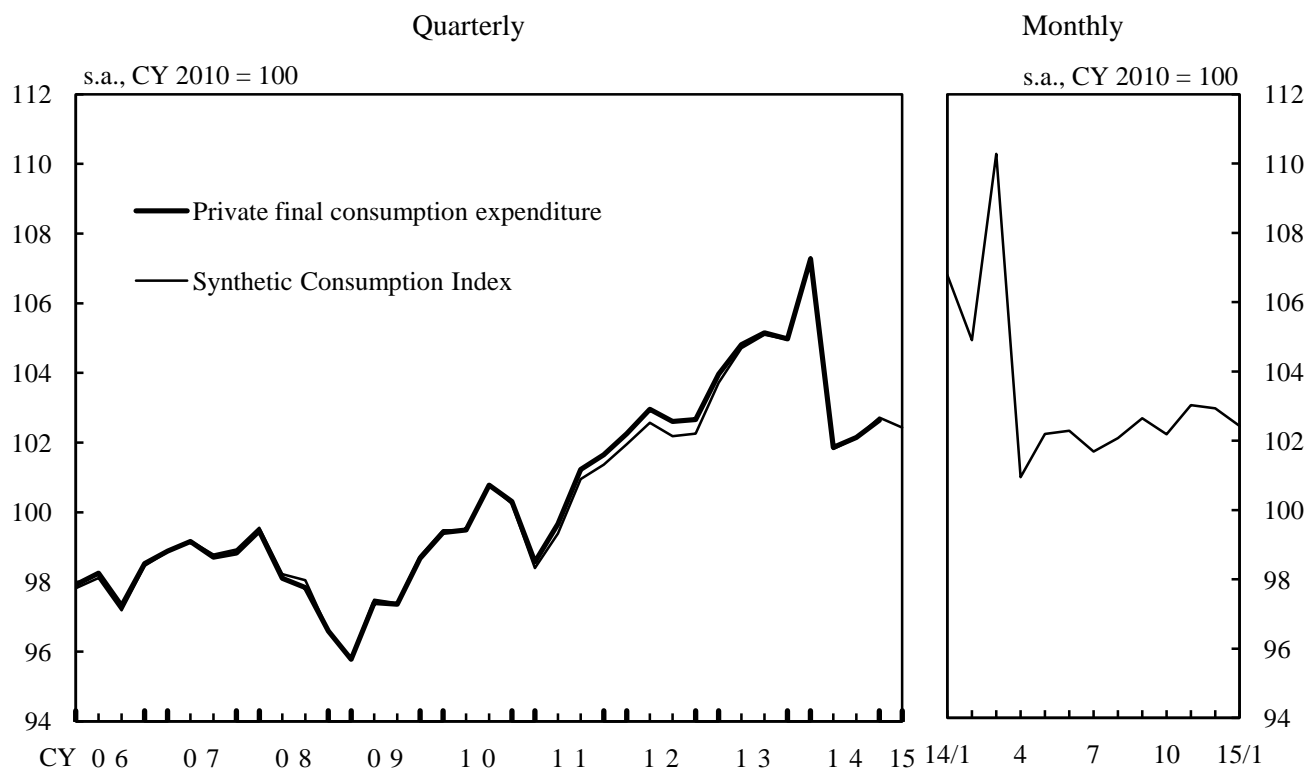

Sources: Cabinet Office, "Orders Received for Machinery";  
 Ministry of Land, Infrastructure, Transport and Tourism, "Statistics on Building Construction Starts."

Indicators of Private Consumption (1)

(1) Breakdown of Private Final Consumption Expenditure (Real)

(2) Private Final Consumption Expenditure and Synthetic Consumption Index (Real)

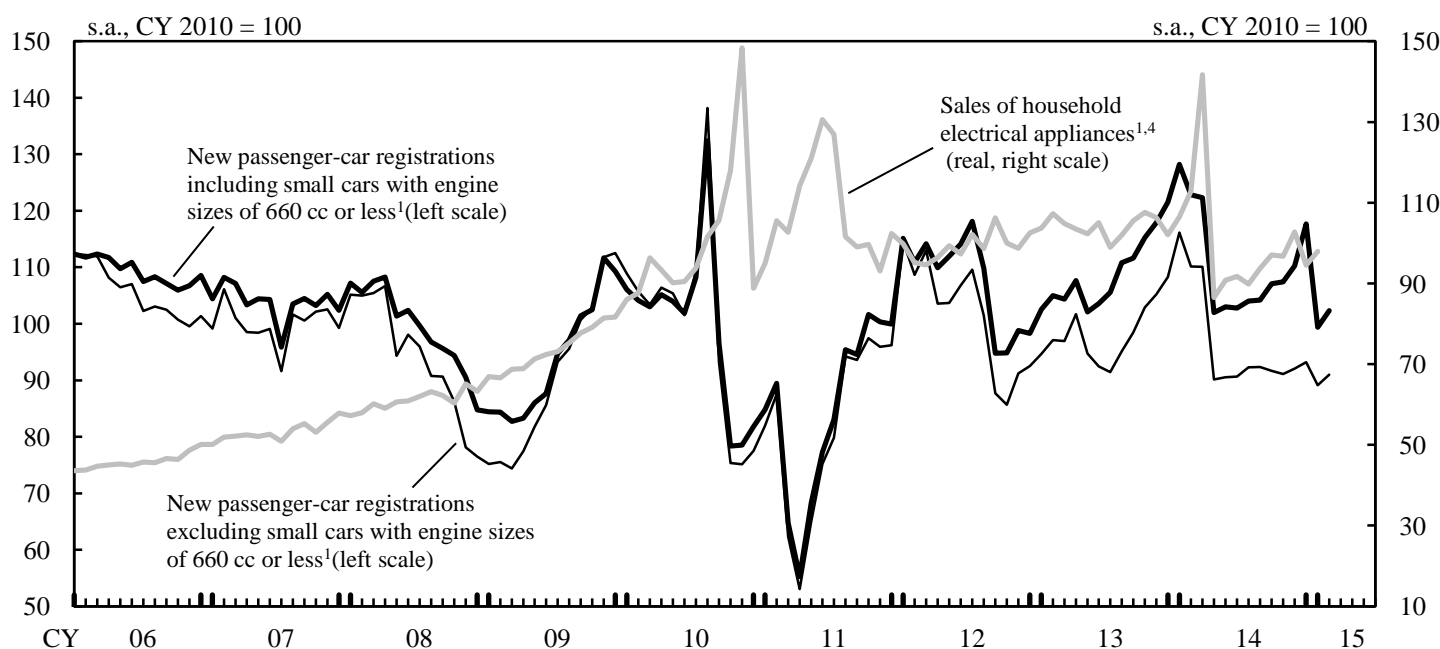

Note: The figure for 2015/Q1 is that of January in quarterly amount.

Source: Cabinet Office, "National Accounts," "Synthetic Consumption Index."

## Indicators of Private Consumption (2)

(1) Household Spending (Real)<sup>5</sup>

## (2) Sales of Durable Goods

Notes: 1. Figures for total expenditure, sales at retail stores, sales of household electrical appliances, and new passenger-car registrations are seasonally adjusted by X-12-ARIMA.

2. Figures for index of consumption expenditure level are based on two-or-more-person households, and are adjusted using the distribution of household by number of household members and age group of household head.

3. Figures for total expenditure are based on two-or-more-person households, and are deflated by the "Consumer Price Index (CPI)" excluding imputed rent.

4. Figures for sales at retail stores are deflated by the CPI for goods (excluding electricity, gas & water charges). Figures for sales of household electrical appliances are calculated as follows: indices of retail sales of machinery and equipment in the "Current Survey of Commerce" are deflated by the geometric means of the corresponding CPI.

5. Figures for 2015/Q1 are those of January in quarterly amount.

Sources: Ministry of Internal Affairs and Communications, "Consumer Price Index,"

"Monthly Report on the Family Income and Expenditure Survey," "Survey of Household Economy";

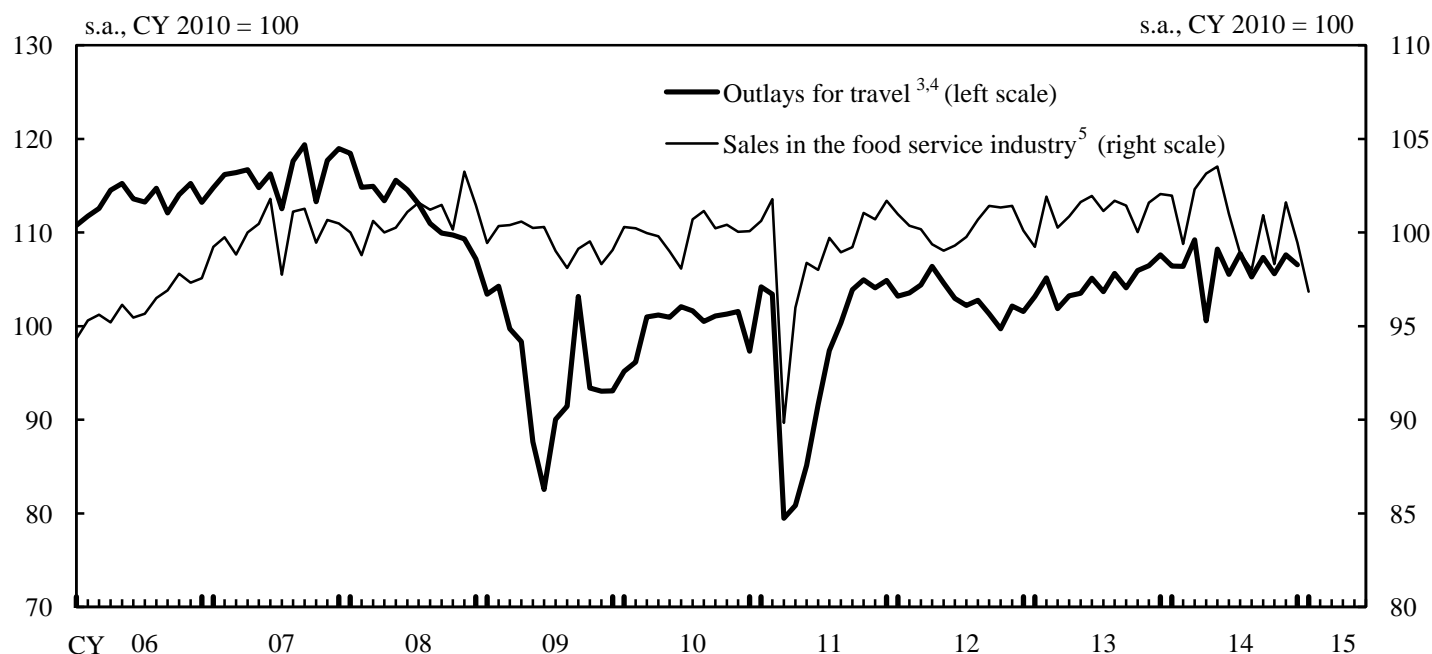

Ministry of Economy, Trade and Industry, "Current Survey of Commerce";

Japan Automobile Dealers Association, "Domestic Sales of Automobiles";

Japan Light Motor Vehicle and Motorcycle Association, "Sales of Light Motor Vehicles."

Indicators of Private Consumption<sup>1</sup> (3)(1) Sales at Retail Stores (Nominal)<sup>2</sup>

## (2) Consumption of Services (Nominal)

Notes: 1. Seasonally adjusted by X-12-ARIMA.

2. Adjusted to exclude the effects of the increase in the number of stores (except for convenience stores).

3. Excluding those by foreign travelers.

4. There are discontinuities in the underlying data as of April 2007, April 2010, and April 2014 due to changes in the sample. Data from April 2007 and onward are calculated using the year-on-year rates of change.

5. Figures for sales in the food service industry are calculated using the year-on-year rates of change of every month released by the Japan Food Service Association based on the amount of monthly sales in 1993 released by the Food Service Industry Survey & Research Center.

Sources: Ministry of Economy, Trade and Industry, "Current Survey of Commerce";

Japan Tourism Agency, "Major Travel Agents' Revenue";

Food Service Industry Survey & Research Center, "*Getsuji Uriage Doukou Chousa* (Monthly survey on food service sales)"; Japan Food Service Association, "*Gaishoku Sangyou Shijou Doukou Chousa*

(Research on the food service industry)."

# Consumer Confidence<sup>1</sup>

## (1) Seasonally Adjusted Series

## (2) Original Series

## Reference: Economy Watchers Survey (Household Activity)

- Notes: 1. The Consumer Confidence Index (covering about 5,700 samples on a nationwide basis from April 2013 onward) and NRI Consumer Sentiment Index (1,200 samples on a nationwide basis) are based on surveys on consumer confidence.
2. In April 2013, the Cabinet Office changed the method for conducting the Consumer Confidence Survey to a postal method, along with some other changes. For this reason, there is a discontinuity between data up to March 2013, which were obtained from the survey on a visit-and-leave method, and those thereafter. The figure for March 2013 on a postal-method basis is obtained from an examination survey.
3. Figures are plotted for each surveyed month and the data for the intervening months are linearly interpolated.
4. Figures are seasonally adjusted by X-12-ARIMA.

Sources: Cabinet Office, "Consumer Confidence Survey," "Economy Watchers Survey"; Nippon Research Institute (NRI), "Consumer Sentiment Survey."

## Indicators of Housing Investment

### (1) Housing Starts

Note: Figures for 2015/Q1 are those of January.

### (2) Sales of Apartments

Notes: 1. Seasonally adjusted by X-12-ARIMA.

2. The figure of total apartment sales for 2015/Q1 is the January-February average.

The term-end stock for 2015/Q1 is that of February.

Sources: Ministry of Land, Infrastructure, Transport and Tourism, "Statistics on Building Construction Starts," etc.

## Production, Shipments, and Inventories

### (1) Production, Shipments, and Inventories

### (2) Production by Industry<sup>1,2,3</sup>

Notes: 1. "Other electrical machinery" is the weighted sum of "electrical machinery" and "information and communication electronics equipment."

2. Figures up to 2008/Q1 are on the 2005 base.

Figures for "general-purpose, production and business oriented machinery" up to 2008/Q1 are those for "general machinery."

3. 2015/Q1 figures are based on the actual production levels in January, and the METI projection of February and March.

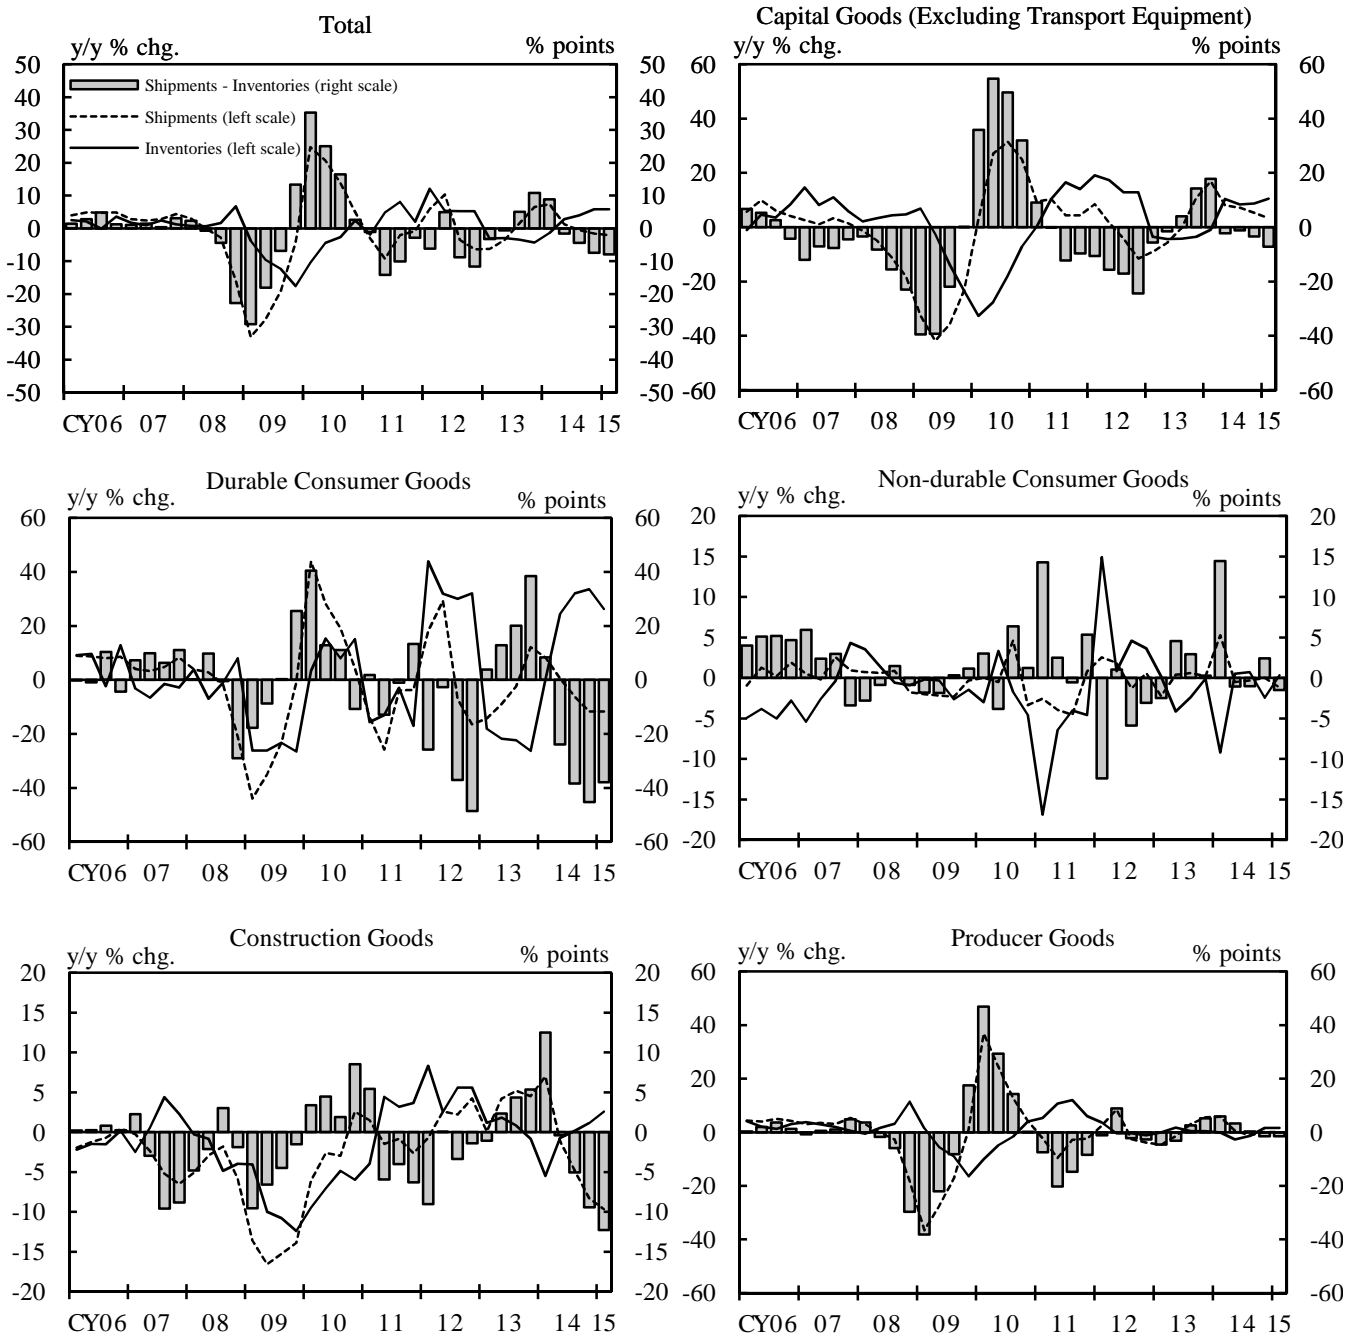

Source: Ministry of Economy, Trade and Industry (METI), "Indices of Industrial Production."

Inventory Cycle

(1) Inventory Cycle (Total)

(2) Shipment-Inventory Balance

Note: Figures for 2015/Q1 are those of January.  
 Source: Ministry of Economy, Trade and Industry, "Indices of Industrial Production."

Labor Market

(1) Unemployment Rate and Active Job Openings-to-Applicants Ratio

(2) New Job Openings and New Applications<sup>1</sup>

(3) Non-Scheduled Hours Worked<sup>2</sup>

Notes: 1. Excluding new school graduates and including part-timers.

2. Data are for establishments with at least five employees.

Sources: Ministry of Internal Affairs and Communications, "Labour Force Survey";  
Ministry of Health, Labour and Welfare, "Report on Employment Service," "Monthly Labour Survey."

## Wages

(1) Total<sup>1,3</sup>(2) Cash Earnings by Type of Worker<sup>1,3</sup>(3) Breakdown of Scheduled Cash Earnings<sup>1,3</sup>

Notes: 1. Data for the "Monthly Labour Survey" are for establishments with at least five employees.

2. ULC = nominal compensation of employees (SNA) / real GDP

3. Figures for 2014/Q4 are December 2014 - January 2015 averages (except ULC).

Except ULC : Q1 = March-May, Q2 = June-August, Q3 = September-November, Q4 = December-February.

ULC : Q1 = April-June, Q2 = July-September, Q3 = October-December, Q4 = January-March.

4. Contributions from scheduled cash earnings of full-time employees and those of part-time employees are calculated as: "scheduled cash earnings of each type of employee (y/y chg.)" times "proportion of the corresponding type's scheduled cash earnings to the previous year's total." Contributions from the effect through changes in proportion of part-time employees are the residuals.

Sources: Ministry of Health, Labour and Welfare, "Monthly Labour Survey"; Cabinet Office, "National Accounts."

Employee Income

(1) Number of Employees<sup>1,5</sup>

(2) Breakdown of Total Cash Earnings<sup>1,2</sup>

(3) Breakdown of Employee Income<sup>1,2</sup>

Notes: 1. Data for the "Monthly Labour Survey" are for establishments with at least five employees.  
 2. Q1 = March-May, Q2 = June-August, Q3 = September-November, Q4 = December-February.  
 Figures for 2014/Q4 are December 2014 - January 2015 averages.  
 3. Calculated as the "number of regular employees" (Monthly Labour Survey) times "total cash earnings" (Monthly Labour Survey).  
 4. Calculated as the "number of employees" (Labour Force Survey) times "total cash earnings" (Monthly Labour Survey).  
 5. Figures for 2015/Q1 are those of January.

Sources: Ministry of Health, Labour and Welfare, "Monthly Labour Survey";  
 Ministry of Internal Affairs and Communications, "Labour Force Survey."

## Prices

## (1) Level

## (2) Changes from a Year Earlier

Notes: 1. Seasonally adjusted by X-12-ARIMA.

2. Adjusted to exclude a hike in electric power charges during the summer season from July to September.

3. The levels of "Consumer Price Index" up to 2009 are based on the linked indices.

4. Figures of "Services Producer Price Index" and "Producer Price Index" up to 2009 are based on the linked indices.

5. Figures include the consumption tax.

Sources: Ministry of Internal Affairs and Communications, "Consumer Price Index"; Bank of Japan, "Corporate Goods Price Index," "Services Producer Price Index."

Import Prices and International Commodity Prices

(1) Import Price Index and Overseas Commodity Index

(2) Import Price Index (Yen Basis, Changes from a Quarter Earlier and 3 Months Earlier)

Notes: 1. Machinery & equipment: general purpose, production & business oriented machinery, electric & electronic products, and transportation equipment.  
 2. Figures for 2015/Q1 are January-February averages.

(3) International Commodity Prices

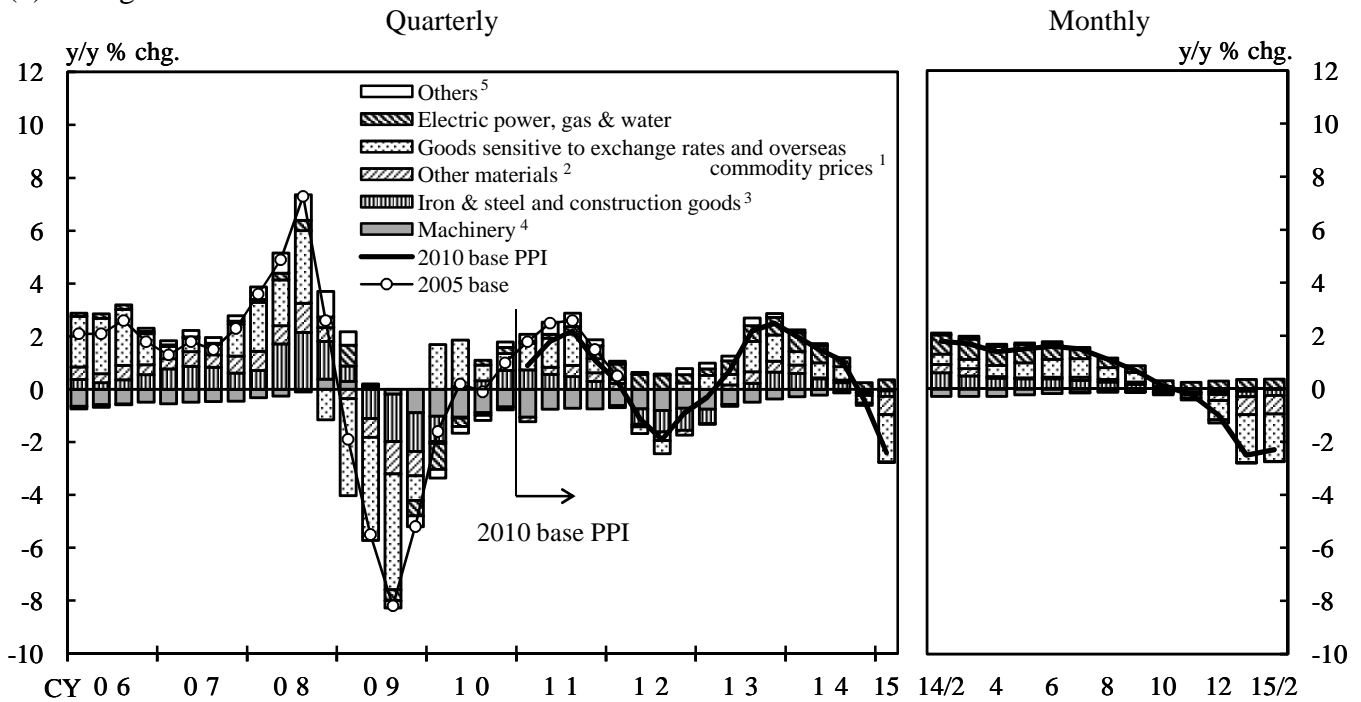

Notes: 1. The "grain index" is the weighted average of prices of three selected items (wheat, soybeans, and corn) in overseas commodity markets. The weights are based on the value of imports in the "Trade Statistics."  
 2. Monthly averages. Figures for March 2015 are averages up to March 16.

Sources: Bank of Japan, "Corporate Goods Price Index," "Bank of Japan Overseas Commodity Index," etc.

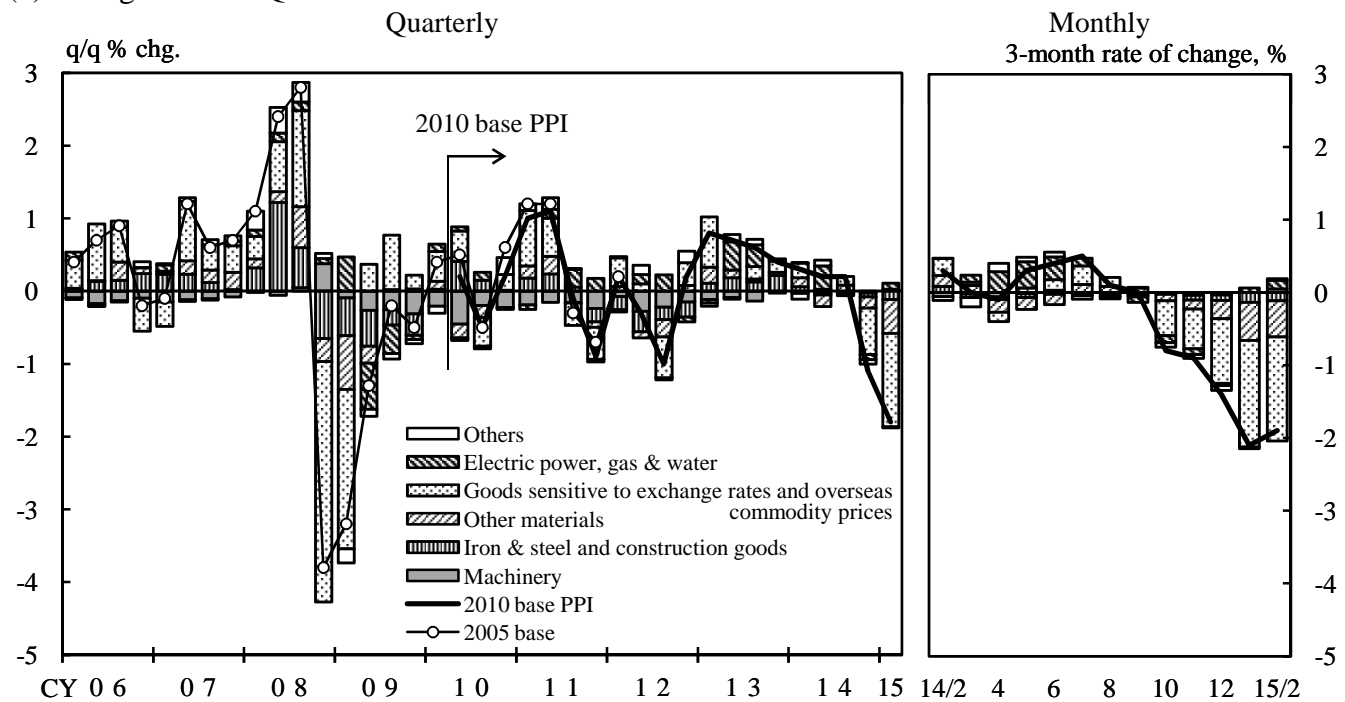

Producer Price Index

(1) Changes from a Year Earlier

(2) Changes from a Quarter Earlier and 3 Months Earlier<sup>6</sup>

- Notes: 1. Goods sensitive to exchange rates and overseas commodity prices: petroleum & coal products and nonferrous metals.  
 2. Other materials: chemicals & related products, plastic products, textile products, and pulp, paper & related products.  
 3. Iron & steel and construction goods: iron & steel, metal products, ceramic, stone & clay products, lumber & wood products, and scrap & waste.  
 4. Machinery: general purpose machinery, production machinery, business oriented machinery, electronic components & devices, electrical machinery & equipment, information & communications equipment, and transportation equipment.  
 5. Others: food, beverages, tobacco & feedstuffs, other manufacturing industry products, agriculture, forestry & fishery products, and minerals.  
 6. Adjusted to exclude a hike in electric power charges during the summer season from July to September. This adjustment makes the "Producer Price Index" fall by about 0.2%.  
 7. Figures from April 2014 onward are adjusted to exclude the direct effects of the consumption tax hike, using indices excluding the consumption tax.  
 8. Figures for 2015/Q1 are January-February averages.

Source: Bank of Japan, "Corporate Goods Price Index."

## Services Producer Price Index

- Notes: 1. Selling, general and administrative expenses: information and communications (excluding newspapers and publishing), advertising services, other services (excluding plant engineering, and civil engineering and architectural services).  
 2. Domestic transportation: transportation and postal services (excluding international transportation, railroad passenger transportation, road passenger transportation, water passenger transportation, and domestic air passenger transportation).  
 3. Fixed investment: leasing and rental (excluding leasing of computer and related equipment and computer rental), and civil engineering and architectural services.  
 4. IT-related: leasing of computer and related equipment, and computer rental.  
 5. Real estate: real estate services.  
 6. Others: finance and insurance, railroad passenger transportation, road passenger transportation, water passenger transportation, domestic air passenger transportation, newspapers and publishing, and plant engineering.  
 7. Figures from April 2014 onward are adjusted to exclude the direct effects of the consumption tax hike, using indices excluding the consumption tax.  
 8. Figures for 2015/Q1 are those of January.

Source: Bank of Japan, "Services Producer Price Index."

Consumer Price Index (Less Fresh Food)

(1) Consumer Price Index (Less Fresh Food)

(2) Goods (Less Agricultural, Aquatic & Livestock Products)¹

(3) General Services

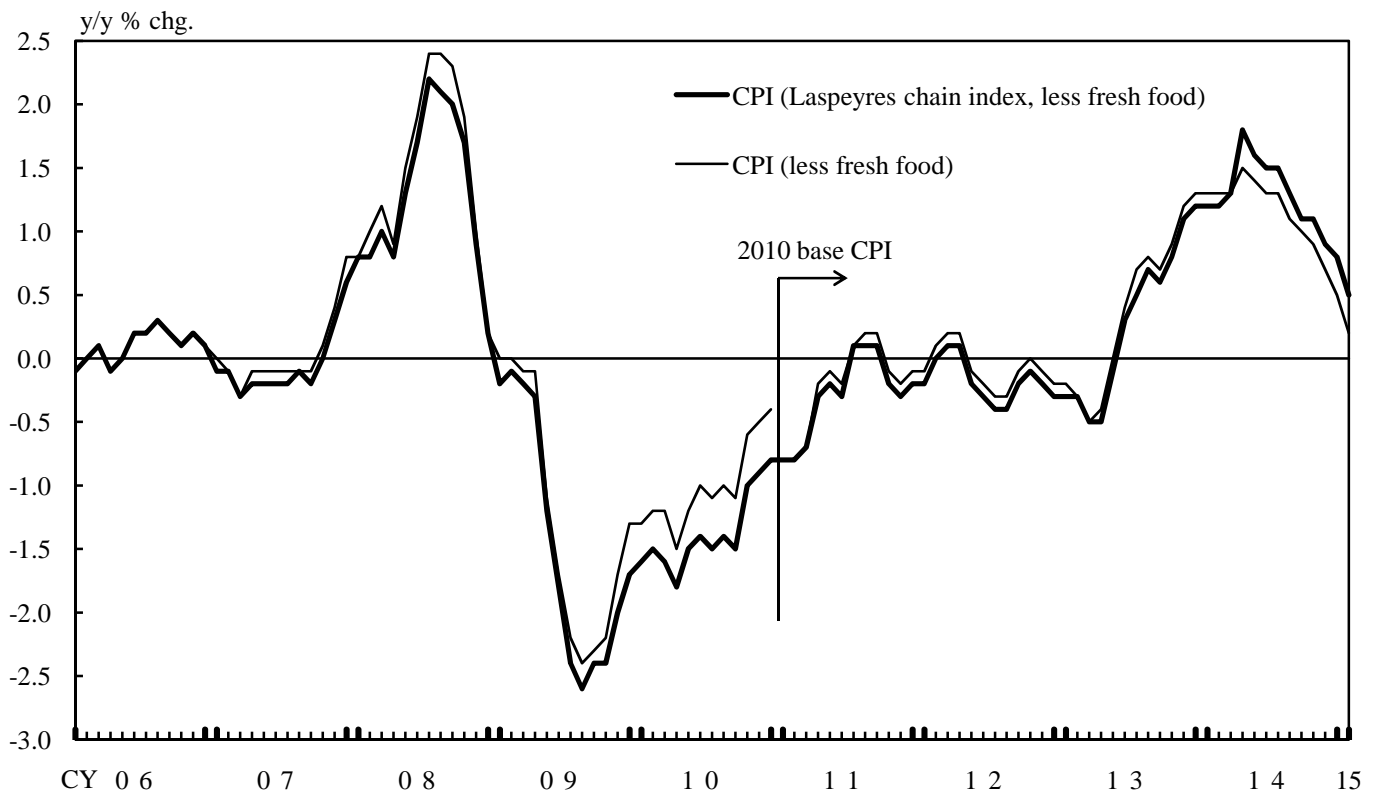

- Notes: 1. The items are basically the same as those defined by the Ministry of Internal Affairs and Communications. However, electricity, manufactured & piped gas & water charges are excluded from goods.
2. Alcoholic beverages are excluded from food. Energy: electricity, gas manufactured & piped, liquefied propane, kerosene, and gasoline.
3. Including shirts, sweaters & underwear.
4. Less agricultural, aquatic & livestock products.
5. The year-on-year rates of change other than those of the CPI (less fresh food), CPI (less food and energy), and general services are calculated using published indices.
6. Figures from April 2014 onward are estimated to adjust the direct effects of the consumption tax hike. Figures for 2015/Q1 are those of January.

Source: Ministry of Internal Affairs and Communications, "Consumer Price Index."

Trend Changes in Consumer Prices

(1) Laspeyres Chain Index

(2) Trimmed Mean

- Notes: 1. Figures for the 10 percent trimmed mean are weighted averages of items; these items are obtained by rearranging year-on-year rates of price change in ascending order and then excluding items in both the upper and lower 10 percent tails by weight.  
 2. Figures for the Laspeyres chain index for 2006 are the year-on-year rates for the fixed-base method. The year-on-year figures for the Laspeyres chain index up to 2010 are on the 2005 base, and those from 2011 onward are on the 2010 base.  
 3. Figures from April 2014 onward are estimated to adjust the direct effects of the consumption tax hike.

Source: Ministry of Internal Affairs and Communications, "Consumer Price Index."

## Inflation Expectations

## (1) Households

## (2) Economists

## (3) Market Participants

- Notes: 1. The Consumer Confidence Survey asks households to provide their price expectations one year from now. Figures are for all households. The weighted average is calculated based on the following assumption: survey responses chosen by households as their expected inflation rates -- "-5% or below," "from -5% to -2%," "from -2% to 0%," "from 0% to +2%," "from +2% to +5%," and "+5% or above" -- indicate inflation rates of -5%, -3.5%, -1%, +1%, +3.5%, and +5%, respectively. There is discontinuity between figures up to March 2013 and those thereafter due to the change in the survey method in April 2013.
2. Figures are forecasts made every January, April, July, and October. Those up through April 2014 are forecasts made every April and October.
3. Figures are forecasts made every June and December. The effects of the consumption tax hikes are excluded.
4. From the September 2013 survey, the QUICK Monthly Market Survey (Bonds) has asked respondents to include the effects of the consumption tax hikes.
5. Yield spreads between fixed-rate coupon-bearing JGBs and inflation-indexed JGBs. Inflation-indexed JGBs issued since October 2013 are designated as "new," while the rest are designated as "old." Figures for "old (longest)" are calculated using yield data for issue No. 16 of the inflation-indexed JGBs, which matures in June 2018.

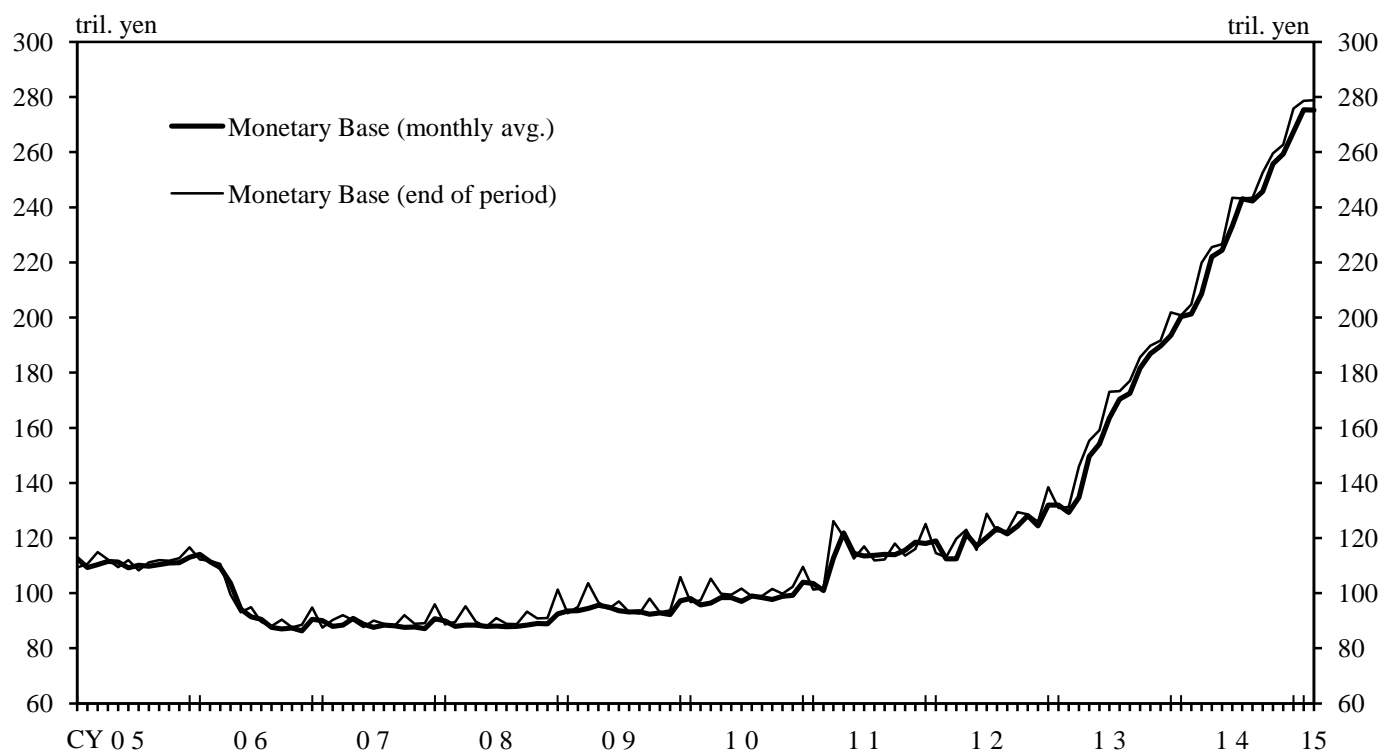

Sources: Cabinet Office, "Consumer Confidence Survey"; Consensus Economics Inc., "Consensus Forecasts"; JCER, "ESP Forecast"; QUICK, "QUICK Monthly Market Survey (Bonds)"; Bloomberg.

## Monetary Base

---

### (1) Level

### (2) Changes from a Year Earlier

Corporate Finance-Related Indicators

(1) Financial Position

(2) Lending Attitude of Financial Institutions as Perceived by Firms

Notes: 1. Data of the "Tankan" are based on all industries. The "Tankan" has been revised from the March 2004 survey. Figures up to the December 2003 survey are based on the previous data sets. Figures from the December 2003 survey are on the new basis.

2. Figures are quarterly averages of monthly data. Figures for 2015/Q1 are those of Jan.-Feb. averages.

3. DI of "Easy" - "Tight."

4. DI of "Easier" - "Tighter."

5. DI of "Accommodative" - "Severe."

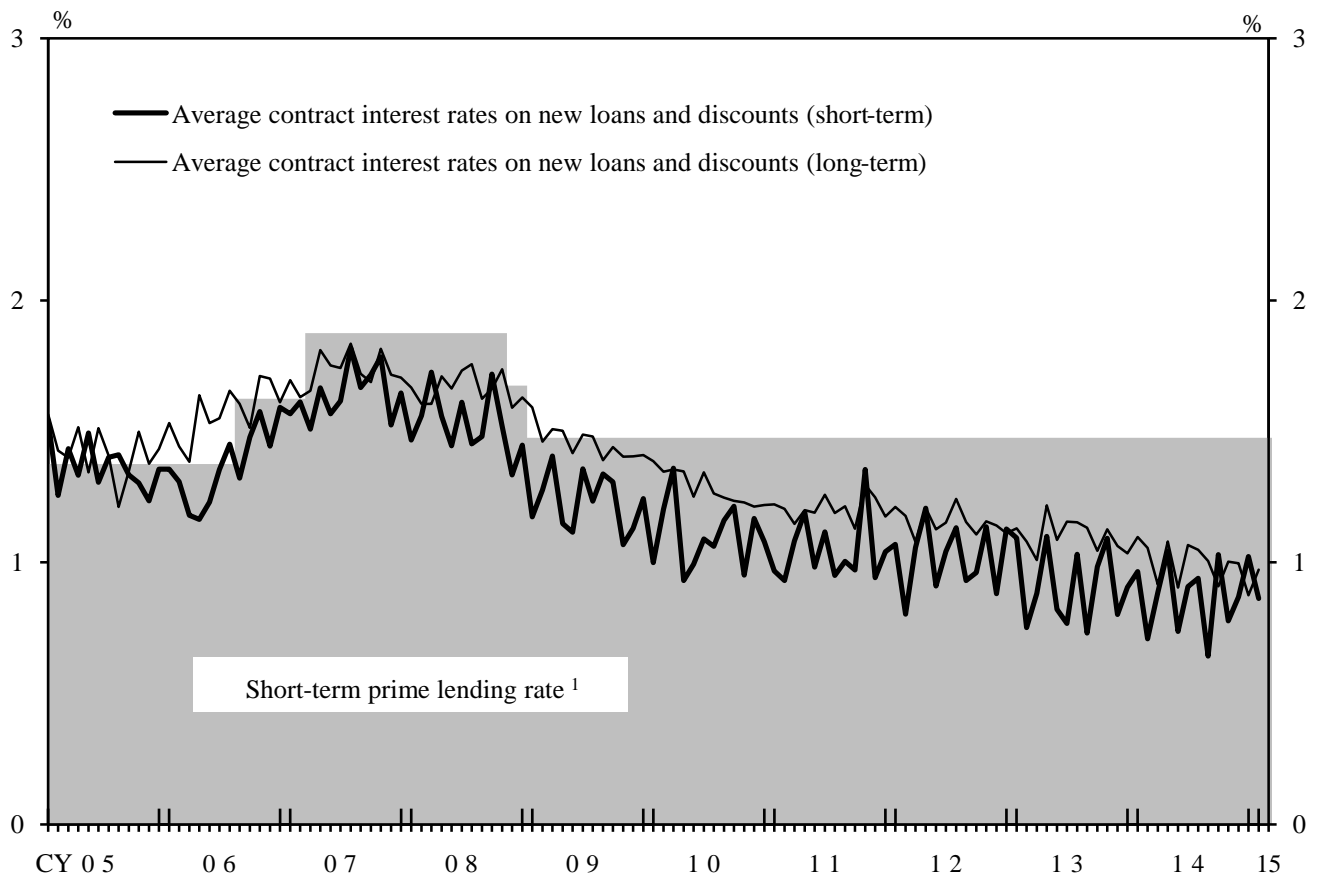

6. DI of "More accommodative" - "More severe."

Sources: Bank of Japan, "Tankan, Short-term Economic Survey of Enterprises in Japan"; Japan Finance Corporation, "Monthly Survey of Small Businesses in Japan," "Quarterly Survey of Small Businesses in Japan (for micro businesses)."

---

## Lending Rates

---

Note: 1. Data are at end of period.

Source: Bank of Japan.

## Lending by Financial Institutions

### (1) Lending by Domestic Commercial Banks<sup>1</sup>

### (2) Lending by Domestically Licensed Banks (by Firm Size)

Notes: 1. Percent changes in average amounts outstanding from a year earlier.

2. "Domestic commercial banks" refers to major banks, regional banks I, and regional banks II.

3. Adjusted to exclude

(1) fluctuations due to the liquidation of loans,

(2) fluctuations in the yen value of foreign currency-denominated loans due to changes in exchange rates,

(3) fluctuations due to loan write-offs,

(4) the transfer of loans to the former Japan National Railways Settlement Corporation to the General Account, and

(5) the transfer of loans to the former Housing Loan Administration Corporation to the Resolution and Collection Corporation.

4. Small enterprises are those capitalized at 300 million yen or less or with regular employees of 300 persons or less ("wholesale trade" capitalized at 100 million yen or less or with regular employees of 100 persons or less, "retail trade" and "eating and drinking services" capitalized at 50 million yen or less or with regular employees of 50 persons or less, and "goods rental and leasing," etc. capitalized at 50 million yen or less or with regular employees of 100 persons or less).

5. Other than small enterprises.

Source: Bank of Japan.

## Private-Sector Fund-Raising in the Capital Markets

### (1) Amount Outstanding of Commercial Paper

Note: Figures are those of short-term corporate bonds registered at the book-entry transfer system. Those issued by banks, securities companies and others such as foreign corporations are excluded; ABCPs are included. Figures up to March 2008 are those compiled by the Bank of Japan.

### (2) Amount Outstanding of Corporate Bonds

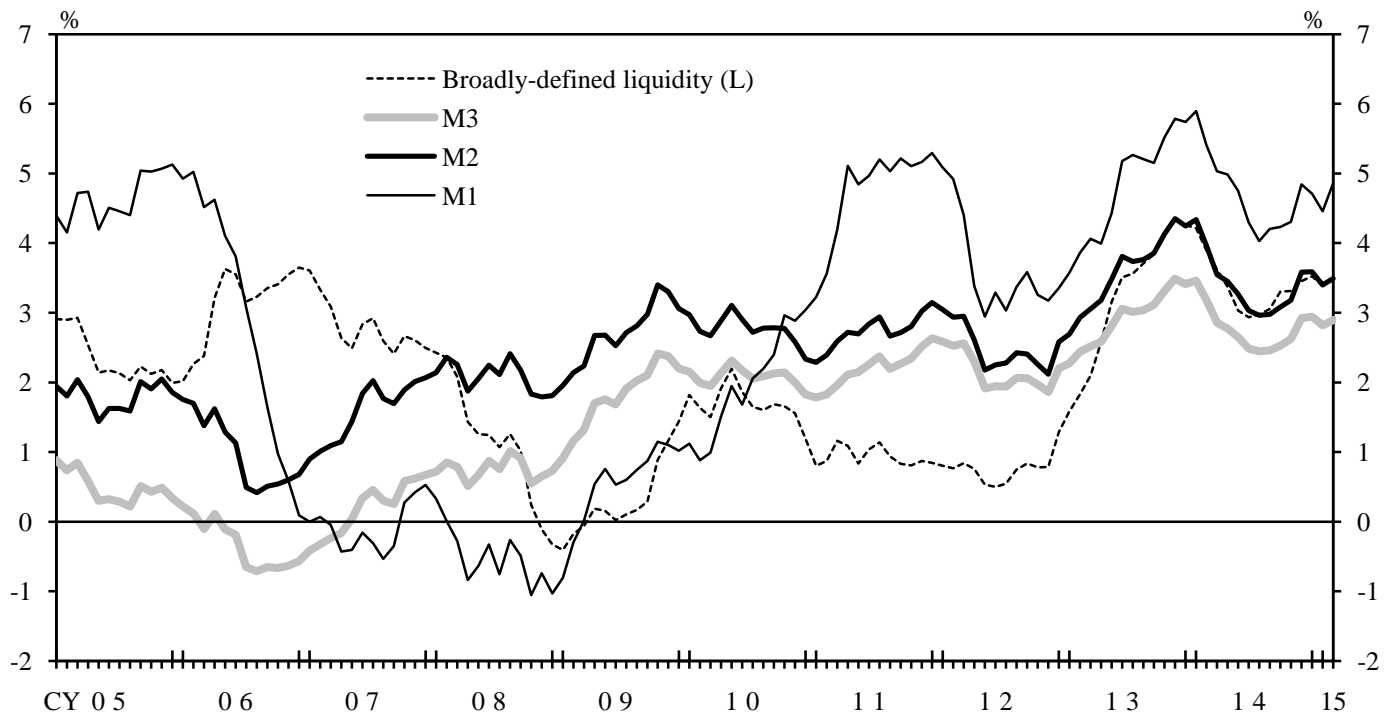

Note: The figures of percentage changes from the previous year of the amount outstanding of corporate bonds are calculated given the following:

- (1) The sum of straight bonds issued in both domestic and overseas markets is used.
- (2) Bonds issued by banks are included.
- (3) Domestic bonds are those registered at the book-entry transfer system. The series is spliced at April 2008 with the one published by the Japan Securities Dealers Association.

Sources: Japan Securities Depository Center, "Issue, Redemption and Outstanding" (for Corporate Bonds), "Outstanding Amounts of CP by Issuer's category";  
 Bank of Japan, "Principal Figures of Financial Institutions";
