# Monthly Report of Recent Economic and Financial Developments<sup>1</sup>

February 2015

## Summary

Japan's economy has continued its moderate recovery trend.

Overseas economies -- mainly advanced economies -- have been recovering, albeit with a lackluster performance still seen in part. In this situation, exports have been picking up. Business fixed investment has been on a moderate increasing trend as corporate profits have improved. Public investment has more or less leveled off at a high level. Private consumption as a whole has remained resilient against the background of steady improvement in the employment and income situation, although recovery in some areas has been sluggish. Housing investment, which continued to decline following the front-loaded increase prior to the consumption tax hike, has recently started to bottom out. Against the backdrop of these developments in demand both at home and abroad, industrial production has been picking up, due in part to the progress in inventory adjustments.

With regard to the outlook, Japan's economy is expected to continue its moderate recovery trend.

Exports are expected to increase moderately mainly against the background of the recovery in overseas economies. As for domestic demand, public investment is expected to enter a moderate declining trend, albeit maintaining a somewhat high level. Business fixed investment is projected to continue a moderate increasing trend as corporate profits follow their improving trend. Private consumption is expected to remain resilient with the employment and income situation continuing to improve steadily. Housing investment is projected to regain its resilience gradually. Reflecting these developments in demand both at home and abroad, industrial production is expected to increase moderately.

---

<sup>1</sup> This report is based on data and information available at the time of the Bank of Japan Monetary Policy Meeting held on February 17 and 18, 2015.

Meanwhile, risks to the outlook include developments in the emerging and commodity-exporting economies, the prospects regarding the debt problem and the risk of low inflation rates being protracted in Europe, and the pace of recovery in the U.S. economy.

On the price front, excluding the direct effects of the consumption tax hike, producer prices are declining relative to three months earlier, reflecting the significant fall in international commodity prices, and the year-on-year rate of increase in consumer prices (all items less fresh food) is around 0.5 percent. Inflation expectations appear to be rising on the whole from a somewhat longer-term perspective.

With regard to the outlook, excluding the direct effects of the consumption tax hike, producer prices are expected to continue declining for the time being, reflecting movements in international commodity prices, and the year-on-year rate of increase in consumer prices is likely to slow for the time being, reflecting the decline in energy prices.

Financial conditions are accommodative.

The monetary base has increased significantly as asset purchases by the Bank of Japan have progressed, and the year-on-year rate of growth has been in the range of 35-40 percent.

Firms' funding costs have been hovering at low levels. With regard to credit supply, firms have continued to see financial institutions' lending attitudes as being on an improving trend. Issuing conditions for CP and corporate bonds have continued to be favorable. Firms' credit demand has been increasing moderately, mainly for working capital and funds related to mergers and acquisitions. Against this backdrop, the year-on-year rate of increase in the amount outstanding of bank lending has been at around 2.5 percent. The year-on-year rate of change in the amount outstanding of CP and corporate bonds has been negative. Firms' financial positions have been favorable. Meanwhile, the year-on-year rate of growth in the money stock has been at around 3.5 percent.

The weighted average of the overnight call rate has been below the 0.1 percent level, and interest rates on term instruments have been more or less unchanged. Compared with last month, long-term interest rates and stock prices have risen. Meanwhile, the value of the yen against the U.S. dollar has remained at more or less the same level as last month.

## 1. Economic Developments

Public investment has more or less leveled off at a high level. The amount of public construction completed—which reflects the progress of public works—was flat in the fourth quarter last year on a quarter-on-quarter basis, after it continued to increase in the third quarter, following the rise in the second quarter mainly due to the effects of the supplementary budget for fiscal 2013 (Chart 5). The value of public works contracted—a measure that reflects public orders—registered a sharp quarter-on-quarter increase in the second quarter last year, assisted partly by the effects of the early implementation of the initial budget for fiscal 2014. It then fell back significantly in the third quarter and continued to decline slightly both in the fourth quarter on a quarter-on-quarter basis and in January relative to the fourth quarter.

Public investment is expected to enter a moderate declining trend, albeit maintaining a somewhat high level.<sup>2</sup>

Real exports have been picking up (Charts 6[1] and 7). They marked a slight increase in the third quarter last year, after declining slightly for two quarters in a row through the second quarter, and rose noticeably in the fourth quarter. On a monthly basis, exports dipped slightly in November, after increasing in October, but they rose again in December. Looking at movements in exports by region (Chart 7[1]), exports to the United States—which decreased in the second quarter and leveled off in the third quarter—increased significantly in the fourth quarter. With motor vehicles and their related goods having bottomed out, exports to the United States have picked up markedly overall since capital goods and parts have recently increased, reflecting the recovery in business fixed investment in the United States. Exports to the EU—which were roughly flat in the third quarter, after increasing for five consecutive quarters until the second quarter—dropped in the fourth quarter. Exports to China—which increased slightly in the third quarter, after declining for two quarters in a row through the second quarter—rose in the fourth quarter as well, mainly in IT-related goods. Exports to NIEs have picked up markedly, mainly in IT-related

---

<sup>2</sup> Public construction, included in the "Emergency Economic Measures" based on the supplementary budget for fiscal 2014, is expected to underpin public investment in the future to a certain degree.

goods and in capital goods and parts: they turned upward in the third quarter after declining in the second quarter, and continued to increase somewhat significantly in the fourth quarter. Exports to ASEAN have been more or less flat since the second quarter after decreasing for seven consecutive quarters, and have remained somewhat sluggish. Meanwhile, exports to Others increased for three consecutive quarters since the second quarter, mainly in motor vehicles and their related goods and in capital goods and parts, due in part to movements in foreign exchange rates. By goods (Chart 7[2]), exports of motor vehicles and their related goods fell somewhat in the fourth quarter as a reflection of the weakness in those bound for the EU, after increasing in the third quarter, mainly in those bound for Others, including the Middle East. Exports of IT-related goods have picked up markedly, mainly in parts for smartphone products. Exports of capital goods and parts have also increased moderately, supported by the recovery in business fixed investment in the United States and by the firmness in global IT-related demand. Exports of intermediate goods, including iron and steel as well as chemicals, had been somewhat weak, mainly in those to East Asia, but they went up in the fourth quarter.

Real imports have continued their moderate increasing trend mainly as a reflection of movements in domestic demand (Charts 6[1] and 9). Real imports fell back sharply in the second quarter last year in response to various declines in demand following the front-loaded increases, but they turned upward, albeit slightly, in the third quarter and continued to rise slightly in the fourth quarter. Looking at movements in imports by goods (Chart 9[2]), those of raw materials turned upward in the third quarter, after falling back substantially in the second quarter, due to the decline in demand following the front-loaded increase prior to the environment tax hike, but they declined again in the fourth quarter. In contrast, imports of consumer goods have been picking up since the third quarter, after declining noticeably in the second quarter due mainly to the effects of the decline in demand following the front-loaded increase prior to the consumption tax hike. Imports of IT-related goods—which had continued to decline through the summer mainly due to the effects of the decline in demand following the front-loaded increase in line with the ending of support for some software (operating system)—surged in the fourth quarter, partly due to the increase in imports of new smartphone products. Imports of capital goods and parts have continued to pick up as a trend, albeit with fluctuations, mainly as a

reflection of developments in business fixed investment at home. Meanwhile, imports of intermediate goods have declined, mainly as a reflection of movements in domestic production and in foreign exchange rates, for three consecutive quarters since the second quarter.

Net exports—in terms of the real trade balance—have continued to improve, after bottoming in the first quarter last year (Chart 6[1]). Looking at movements in the nominal current account balance on a quarterly basis (Chart 6[2] and [3]), the current account balance turned to a surplus in the second quarter last year, mainly because of a subsequent decline in imports, in response to the front-loaded increase in demand, and maintained an almost similar amount of surplus in the third quarter. The surplus of the current account balance expanded in the fourth quarter, due to (i) the expansion in primary income surplus and the improvement in the travel balance, supported primarily by movements in foreign exchange rates and (ii) the reduction in trade deficit as a result of the pick-up in exports and the decline in crude oil prices.

Regarding the environment surrounding exports, overseas economies—mainly advanced economies—have been recovering, albeit with a lackluster performance still seen in part (Chart 8[2]). Looking at movements by major region, the U.S. economy has continued to recover solidly, since the firmness in the household sector has been feeding through to the corporate sector. Momentum for the recovery in the European economy has remained weak, although a further slowdown has been staved off. As for the Chinese economy, stable growth has continued as a trend; however, growth momentum has recently slowed with downward pressure from an overhang in supply in the manufacturing sector and adjustments in the real estate market. Emerging economies apart from China and the commodity-exporting economies have continued to lose pace as a whole. As for the exchange rate, the yen has remained significantly depreciated against both the U.S. dollar and the euro compared to a while ago; in terms of the real effective exchange rate, the yen has depreciated to the level last recorded in 1973, below that of around 2007 (Chart 8[1]).

Overseas economies, mainly advanced economies, are expected to continue recovering moderately. The aforementioned movements in foreign exchange rates are also projected to underpin exports, including those of services such as travel. By

major region, the U.S. economy is expected to continue a firm recovery centered on private demand. As for the European economy, growth is projected to be sluggish in the near future; attention should continue to be paid to such issues as the outcome of its debt problem, including the developments in Greece, and the effects of the slowdown in the Russian economy. As for the Chinese economy, stable growth is projected to continue, albeit with lower growth rates; the aforementioned downward pressure continues to require close monitoring. Growth in emerging economies apart from China and the commodity-exporting economies might lose pace for a protracted period, although the recovery in advanced economies is basically expected to exert positive effects gradually.

Taking the above into consideration, exports are expected to increase moderately mainly against the background of the recovery in overseas economies. Imports are projected to continue their moderate increasing trend, largely as a reflection of movements in domestic demand, although movements in foreign exchange rates are expected to exert downward pressure on imports. Considering these developments in exports and imports, net exports are projected to be on a moderate improving trend, albeit with fluctuations.

Business fixed investment has been on a moderate increasing trend as corporate profits have improved. The aggregate supply of capital goods—a coincident indicator of machinery investment—on a basis excluding transport equipment was temporarily more or less flat in the third quarter last year, after falling back in the second quarter from the upsurge in the previous quarter, but rose again in the fourth quarter; it has trended moderately upward with the fluctuations smoothed out (Chart 10[1]). As for leading indicators, machinery orders (private sector, excluding orders for ships and those from electric power companies)—a leading indicator of machinery investment—fell back somewhat significantly in the second quarter last year from the increase in the previous quarter; they rose again in the third quarter, notably in manufacturing, and inched upward in the fourth quarter as well (Chart 11[1]). On a monthly basis, machinery orders dropped in October, after exhibiting month-on-month increases for four consecutive months since June, but they increased for two straight months in November and December. Construction starts (floor area, private, nondwelling use)—a leading indicator of construction

investment—had shown some weakness since the start of last year, mainly in nonmanufacturing, but they increased in the fourth quarter, mainly in wholesale and retail, due in part to an upsurge in orders for large-scale projects in October (Chart 11[2]).

Regarding the environment surrounding business fixed investment, corporate profits have continued to improve. As for the outlook, corporate profits are projected to continue an improving trend, supported by the increase in domestic and foreign demand as well as by the decline in crude oil prices and movements in foreign exchange rates.

Taking the above into consideration, business fixed investment is projected to continue a moderate increasing trend as corporate profits follow their improving trend.

Private consumption as a whole has remained resilient against the background of steady improvement in the employment and income situation, although recovery in some areas has been sluggish (Chart 12). Looking at consumption of goods—as seen through sales at retail stores in real terms (Chart 13[1])—it registered an increase in the third quarter last year on a quarter-on-quarter basis, after falling substantially in the second quarter due to the effects of the decline in demand following the front-loaded increase, and continued to move moderately upward in the fourth quarter. Meanwhile, looking at consumption of durable consumer goods (Chart 13[2]), the number of new passenger-car registrations almost bottomed out in the third quarter, despite falling substantially in the second quarter due to the effects of the decline in demand following the front-loaded increase. Since then, it has shown some signs of picking up, albeit with large fluctuations of small cars.<sup>3</sup> Sales of household electrical appliances in real terms decreased significantly in the second quarter, due to the decline following (i) the front-loaded demand in line with the consumption tax hike and (ii) the renewal demand for PCs in line with the ending of support for some software, but sales have tended to pick up at a moderate pace since the third quarter, albeit with fluctuations, mainly due to increased sales of smartphone products. Sales

---

<sup>3</sup> Sales of small cars with engine sizes of 660cc or less registered somewhat high growth in the fourth quarter due in part to aggressive sales promotions by the automobile industry, but they fell back sharply in January in response to these movements.

at department stores have picked up since May, after declining substantially in April in response to the front-loaded increase in demand. They have continued to improve, supported in part by increased sales to foreign visitors to Japan, even after the improvement became evident in the summer (Chart 14[1]). Sales at supermarkets—which had continued to pick up moderately since May, mainly in food and beverages, after decreasing somewhat largely in April—have shown relatively weak movements, with sales declining slightly in the fourth quarter. Sales at convenience stores have continued to show their moderate increasing trend. Meanwhile, as for consumption of services (Chart 14[2]), outlays for travel have been steady on the whole, aided by the firmness in domestic travel, despite some weakness in overseas travel affected partly by movements in foreign exchange rates. Sales in the food service industry have remained steady as a trend, disregarding the effects of issues related to tainted chicken products from China and other factors.

As for statistics on the demand side, consumption expenditure in the *Family Income and Expenditure Survey* (in real terms; two-or-more-person households) shows that the index on an "excluding housing, purchase of vehicles, money gifts and remittance" basis (Chart 13[1])—which is compiled so as to make it similar to items used for estimating GDP—almost bottomed out in the third quarter last year, after falling back sharply in the second quarter from the front-loaded increase in demand, and moved slightly upward in the fourth quarter. The total expenditure in the *Survey of Household Economy* (in real terms; two-or-more-person households) has continued to be more or less flat since the summer, after decreasing significantly in the second quarter in response to the front-loaded increase in demand, notably in durable consumer goods.

Looking at indicators related to consumer confidence, the consumer confidence index—which continued to become cautious since the summer last year—has recently bottomed out (Chart 15).

Private consumption is expected to remain resilient with the employment and income situation continuing to improve steadily.

Housing investment, which continued to decline following the front-loaded increase prior to the consumption tax hike, has recently started to bottom out. The number of housing starts—a leading indicator of housing investment—continued to fall back since the first quarter last year due to the decline in demand following the front-loaded increase, mainly in owner-occupied houses, but it has virtually leveled off since the summer (Chart 16[1]).

Housing investment is projected to regain its resilience gradually with the employment and income situation continuing to improve steadily, also supported by accommodative financial conditions.

Industrial production has been picking up, due in part to the moderate increase in demand both at home and abroad as well as to the progress in inventory adjustments (Chart 17). Industrial production—which had continued to decrease in the third quarter last year after falling back noticeably in the second quarter from the front-loaded increase in demand—turned upward in the fourth quarter. On a monthly basis, the level of production changed only slightly in October and November, after registering somewhat strong month-on-month growth in September, but it rose noticeably again in December. In light of the progress in inventory adjustments—notably in durable consumer goods (automobiles and household electrical appliances)—triggered by the decline in demand following the front-loaded increase, the recent rise in exports has also facilitated the pick-up in firms’ production activity. Looking at quarterly movements by industry, production of transport equipment turned upward in the fourth quarter, albeit marginally, following noticeable decreases for two quarters in a row in the second and third quarters, since inventory adjustments have continued to take place in line with the decline in demand following the front-loaded increase. Inventories have declined noticeably amid a pick-up in shipments, mainly to North America, and firms’ production activity is considered to have started to move out from the inventory adjustment phase at this stage. Production of electrical machinery and of information and communication electronics equipment—which continued to register a sizeable decline since early last spring, mainly due to the effects of the decline in household electrical appliances (air conditioners and PCs) in response to prior increases—have almost bottomed out recently. Meanwhile, production of general-purpose, production and business

oriented machinery has been on a moderate increasing trend, albeit with fluctuations, in light of developments in business fixed investment at home and abroad. Production of electronic parts and devices has also continued a noticeable increase, primarily in parts for smartphone products produced in Asia, supported by movements in foreign exchange rates.

Shipments, like production, declined slightly in the third quarter last year, after falling back somewhat sharply in the second quarter from the prior increase in demand, but they increased firmly in the fourth quarter (Chart 17[1]). By goods, although shipments of construction goods have remained somewhat weak, those of producer goods (mainly electronic parts and devices) and capital goods have picked up markedly, with shipments of durable consumer goods having almost stopped declining.

Inventories have recently started to decline, although they are still at a somewhat high level (Chart 17[1]). Recent movements show that inventories went up slightly as of the end of September last year compared with the end of June, after increasing noticeably as of the end of June relative to the end of March, but they were almost flat as of the end of December compared with the end of September. On a monthly basis, inventories moved somewhat upward in November, after falling for two months in a row in September and October, but they turned down again in December. As for the shipment-inventory balance (year-on-year rate of change in shipments less that in inventories), growth in inventories has marginally outpaced that in shipments on the whole, partly in response to the increase in demand prior to the consumption tax hike in the previous year (Chart 18[2]).<sup>4</sup> By goods, growth in inventories of durable consumer goods and construction goods has outpaced that in shipments, whereas growth in inventories of capital goods, nondurable consumer goods, and producer goods has been generally balanced with that in shipments.

Reflecting these developments in demand both at home and abroad, industrial production is expected to increase moderately. Based on anecdotes by firms and on

---

<sup>4</sup> As for the shipment-inventory balance, growth in shipments on a year-on-year basis tends to be somewhat low and that in inventories to be somewhat high in the second half of fiscal 2014, due to the front-loaded increase in demand prior to the consumption tax hike in the second half of fiscal 2013.

other information, industrial production as a whole is projected to increase moderately in the first quarter. By industry, production of transport equipment is expected to increase with inventory adjustments having come to an end. Production of general-purpose, production and business oriented machinery is also projected to keep moving firmly upward as a reflection of developments in business fixed investment at home and abroad. Production of electronic parts and devices is projected to remain at a high level even after the noticeable increase in the previous quarter, assisted in part by the effects of movements in foreign exchange rates, in light of firm final demand for smartphones.

As for the employment and income situation, supply and demand conditions in the labor market have continued to improve steadily, and employee income has increased moderately.

As for supply and demand conditions in the labor market, the unemployment rate dropped to 3.4 percent in December last year, marking a low level last seen in August 1997 (Chart 19). New job openings had ceased to improve as a reflection of economic activity during the first half of this fiscal year, but they moved upward again in the fourth quarter. Amid these movements, the ratio of new job openings in the fourth quarter rose from the previous quarter, owing partly to the decline in new applications; it recorded a relatively high level of 1.71, on par with that in the first half of 1992. As for the active job openings-to-applicants ratio, the pace of improvement turned tentatively sluggish up until early fall, but the improving trend has recently become evident again; it recorded 1.15 in December, a high level last seen in March 1992. Non-scheduled hours worked have been more or less flat since last spring, after trending moderately upward. Looking at recent movements by industry, manufacturing has shown an increase again as a reflection of the pick-up in production activity, whereas nonmanufacturing has continued to be somewhat weak.

In terms of employment, the year-on-year rate of increase in the number of employees in the *Labour Force Survey* has been moving in the range of 0.5-1.0 percent on average, despite large monthly fluctuations (Chart 21[1]). The number of regular employees in the *Monthly Labour Survey* has continued to register somewhat high growth, moving in the range of 1.5-2.0 percent.

Total cash earnings per employee have risen moderately, albeit with fluctuations (Chart 21[2]). Hourly cash earnings of overall employees have also been on a moderate improving trend as a whole (Chart 20[1]). Taking a closer look, both monthly cash earnings of full-time employees per employee and hourly cash earnings of part-time employees have accelerated their year-on-year rates of increase at a moderate pace, albeit with fluctuations (Chart 20[2]). Looking at scheduled cash earnings on a year-on-year basis, those of part-time workers have recently registered a slight negative on the back of the decline in the number of hours worked. As a whole, however, scheduled cash earnings have been picking up with downward pressure from the increase in the ratio of part-time workers having diminished moderately, while scheduled cash earnings of full-time employees have been on a positive trend mainly due to the effects of the rise in base wages last spring (Chart 20[3]). The year-on-year rate of increase of non-scheduled cash earnings has recently diminished, as a reflection of movements in the number of hours worked. Meanwhile, special cash earnings in November-December (preliminary figures)—which cover a vast majority of winter bonuses—showed a solid increase of positive 2.5 percent on a year-on-year basis, although they grew at a reduced rate compared with summer bonuses (a year-on-year increase of 4.3 percent for the June-August period).<sup>5</sup>

Employee income has risen moderately, as a reflection of the aforementioned developments in employment and wages (Chart 21[3]).

As for the outlook, employee income is expected to continue increasing moderately, in line with the recovery in economic activity and business performance.

## **2. Prices**

International commodity prices have recently shown movements of bottoming out, after continuing to fall significantly since the summer last year (Chart 23[1] and [3]). Prices of crude oil—which had continued to decline sharply in light of the

---

<sup>5</sup> Winter bonuses correspond to the November-January aggregates of special cash earnings in the *Monthly Labour Survey*. The weight of each month in actual figures for fiscal 2013 shows that about 5 percent of winter bonuses were paid as special cash earnings in November, over 90 percent in December, and about 4 percent in January.

slack in supply and demand conditions worldwide—have recently been fluctuating, albeit with a slight rebound compared to a while ago, in view of mixed movements in the United States such as the decline in the number of oil drilling rigs and the pile-up in inventories of crude oil. Prices of nonferrous metals have been softening, mainly in view of the possible downward revision of growth in emerging economies including China. Meanwhile, prices of grains—which had been rising toward the year-end—have recently fallen back, due in part to a good harvest forecast in the United States.

Import prices (on a yen basis) are declining relative to three months earlier, as a reflection of the significant fall in international commodity prices (Chart 23[2]).

Producer prices (adjusted to exclude the effects of seasonal changes in electricity rates, same hereafter), on a basis excluding the direct effects of the consumption tax hike, are declining relative to three months earlier, reflecting the significant fall in international commodity prices (Chart 24[2]).<sup>6</sup> Excluding the direct effects of the consumption tax hike, the three-month rate of change in producer prices declined at an accelerated pace in January by registering negative 2.0 percent, mainly due to the fall in international commodity prices including crude oil. Looking in detail at producer price movements in January relative to three months earlier, prices of "goods sensitive to exchange rates and overseas commodity prices" posted a large negative as a whole mainly due to price declines in petroleum products such as gasoline and naphtha—which is a reflection of the decline in crude oil prices—although prices of nonferrous metals rose slightly in response to movements in foreign exchange rates. The rate of decline in prices of "other materials" and "iron & steel and construction goods" has continued to expand, chiefly in chemicals & related products, iron & steel, and scrap & waste, due to the effects of either the fall in international commodity prices or the deterioration of supply and demand conditions in Asia. Prices of "others" have continued to decline moderately, mainly in

---

<sup>6</sup> Figures are adjusted to exclude large seasonal fluctuations in electric power charges to observe the underlying changes in producer prices. Industrial and commercial electric power charges are set relatively high during July-September, when electric power consumption increases substantially.

agriculture, forestry & fishery products. Meanwhile, prices of machinery have been more or less flat.

The year-on-year rate of increase in services producer prices (excluding international transportation; year-on-year basis, same hereafter), on a basis excluding the direct effects of the consumption tax hike, has been moving in the range of 0.5-1.0 percent (Chart 25). Looking in detail at recent services producer price movements, the year-on-year rate of change in prices related to "selling, general and administrative expenses" has been rising slightly as a whole, since (i) advertising services have been on a positive trend, albeit with fluctuations, (ii) temporary employment agency services have continued to be positive on the back of tightening supply and demand conditions in the labor market, and (iii) hotel services have registered a relatively large increase in light of firm demand from business and sightseeing. The rate of increase in prices related to "fixed investment" has tended to expand, mainly in civil engineering and architectural services. The rate of change in prices related to "domestic transportation" has been somewhat elevated, mainly in overland freight transportation and in warehousing and other transportation services. Prices of "others" have continued to register somewhat high growth since August last year, together with the price increase in domestic air passenger transportation, as finance and insurance (mainly motor vehicle insurance) has continued to show relatively strong movements. Meanwhile, the rate of change in prices of "real estate services" including office space rental—which had been slightly positive since July—leveled off in December on a year-on-year basis, partly in response to the previous year's price increase.

The year-on-year rate of increase in consumer prices (all items less fresh food; year-on-year basis, same hereafter), on a basis excluding the direct effects of the consumption tax hike, is moving around 0.5 percent (Chart 26[1]).<sup>7</sup> Consumer prices for December last year, on a basis excluding the direct effects of the consumption tax hike, somewhat narrowed their rate of increase to positive 0.5 percent from positive 0.7 percent in November on a less fresh food basis. On a basis excluding food and energy, the rate of increase stood at positive 0.4 percent in

---

<sup>7</sup> For details on the direct effects of the consumption tax hike (estimates), see BOX in the *Monthly Report of Recent Economic and Financial Developments*, March 2014.

December, on par with that of the previous month. Regarded as a method for capturing trend changes, the year-on-year rate of increase in the trimmed mean has diminished recently (Chart 27[2]).<sup>8</sup>

Looking at recent year-on-year growth in consumer prices, prices for goods (excluding agricultural, aquatic & livestock products) have reduced their rate of increase markedly. Looking in detail, prices of petroleum products expanded their rate of decline in December, after turning negative in November following the continued reduction of their year-on-year rate of increase since the summer last year as a reflection of the decline in crude oil prices. Prices of food products—which had continued to be somewhat strong on the back of past cost increases in the form of higher prices—have tended to narrow their rate of increase affected by movements in private consumption after the consumption tax hike with some time lag. Prices of durable goods and clothes have recently been somewhat weak, as the effects of movements in private consumption after the consumption tax hike have remained. Meanwhile, prices of agricultural, aquatic & livestock products (less fresh food) have tended to reduce their rate of increase overall, albeit marginally, as a reflection of the decline in prices of rice, despite upward pressure from prices of meats. Prices of general services have more or less leveled off since June on a year-on-year basis. Looking in detail, prices of hotel charges have been positive on a year-on-year basis, albeit with fluctuations, and in addition, the rise in wages is considered to have been exerting upward pressure on prices of various services as a trend. On the other hand, the introduction of new price plans for mobile telephone charges since June and the reduction in some prices of eating out last spring have been exerting downward pressure. Meanwhile, prices of package tours to overseas, despite large monthly fluctuations, have recently reduced their rate of increase, due in part to the effects of the weakness in overseas travel in line with movements in foreign exchange rates. The year-on-year rate of decline in prices of rent—which accounts for a large share of general services—has tended to narrow, albeit very moderately, from a somewhat longer-term perspective, but the improvement has recently come to a pause. Fees for public services have continued to narrow their rate of increase as a trend, as a

---

<sup>8</sup> The trimmed mean is obtained by systematically discarding a certain percentage of the highest and lowest marks of the price fluctuation distribution by item to eliminate large relative price fluctuations.

reflection of energy-related movements against the backdrop of the decline in crude oil prices. Recently, however, the year-on-year rate of increase has moved upward due to the effects of the decline in electricity prices in response to the previous year's increase and to another round of price increases by one electric power company. As a result, the year-on-year rate of increase of fees for public services as a whole has accelerated marginally.

With regard to the outlook, excluding the direct effects of the consumption tax hike, producer prices are expected to continue declining for the time being, reflecting movements in international commodity prices, and the year-on-year rate of increase in consumer prices is likely to slow for the time being, reflecting the decline in energy prices.

Meanwhile, inflation expectations appear to be rising on the whole from a somewhat longer-term perspective (Chart 28).

### **3. Financial Developments**

#### **(1) Corporate Finance and Monetary Aggregates**

The monetary base (average amounts outstanding) has increased significantly as asset purchases by the Bank of Japan have progressed, and the year-on-year rate of growth has been in the range of 35-40 percent (Chart 29).

Firms' funding costs have been hovering at low levels. Issuance rates on CP and those on corporate bonds have been at low levels. The average contract interest rates on new loans and discounts have also been low (Chart 31).

With regard to credit supply, firms have continued to see financial institutions' lending attitudes as being on an improving trend (Chart 30). Issuing conditions for CP and corporate bonds have continued to be favorable. In these circumstances, as for funding of the private sector, the year-on-year rate of increase in the amount outstanding of bank lending has been at around 2.5 percent, mainly in demand for working capital and funds related to mergers and acquisitions (Chart 32). The

year-on-year rate of change in the amount outstanding of CP and corporate bonds has been negative (Chart 33).

Firms' financial positions have been favorable (Chart 30). The number of corporate bankruptcies has remained at a low level (Chart 35).

Meanwhile, the year-on-year rate of growth in the money stock (M2) has been at around 3.5 percent. Its January reading was 3.4 percent on a year-on-year basis, following 3.6 percent in December (Chart 34).<sup>9</sup>

## **(2) Financial Markets**

In Japan's money markets, interest rates have been stable at low levels, including those for longer term rates. The overnight call rate (uncollateralized) has been below the 0.1 percent level. Regarding interest rates on term instruments, the T-Bill rate (3-month) has generally been at around 0 percent. The Euroyen interest rate (3-month) and interest rates on Euroyen futures have both been virtually level (Chart 36). In U.S. dollar funding, the LIBOR-OIS spread for the dollar has basically been flat (Chart 37).

Yields on 10-year government bonds (newly issued 10-year JGB) have moved upward, partly due to profit-taking sales; they are recently moving at around 0.4 percent (Chart 38).

Yield spreads between corporate bonds and government bonds have been more or less flat at low levels (Chart 39).

Stock prices have risen, primarily as a reflection of solid Japanese corporate earnings and of the rise in U.S. stock prices. The Nikkei 225 Stock Average is recently moving in the range of 18,000-18,500 yen (Chart 40).

---

<sup>9</sup> On an M3 basis, which includes the Japan Post Bank, the year-on-year rate of growth has been in the range of 2.5-3.0 percent; its January reading was 2.8 percent, following 2.9 percent in December. The year-on-year rate of growth in broadly-defined liquidity (L) has recently been at around 3.5 percent; it increased by 3.4 percent in January, following an increase of 3.5 percent in December.

In the foreign exchange market, the yen's exchange rate has depreciated somewhat against the U.S. dollar, mainly in response to the rise in U.S. interest rates; the yen is currently moving in the range of 119-120 yen against the U.S. dollar. The yen's exchange rate has appreciated somewhat against the euro, primarily due to the ECB's announcement of further monetary easing; the yen is recently moving at around 136 yen against the euro (Chart 41).

| Nominal GDP                       | -0.1   | 1.5   | 0.2    | -0.9   | 1.1   |

Note: Figures of components in real GDP indicate contributions to changes in GDP.

## (3) Indexes of Business Conditions (Composite Indexes)

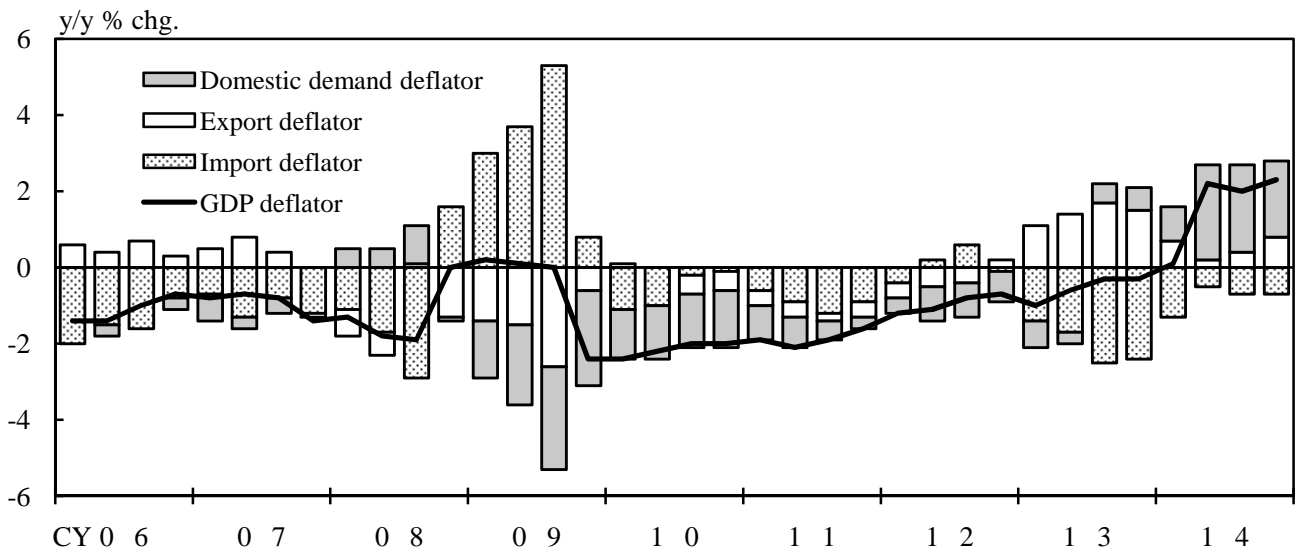

Note: Shaded areas indicate recession periods.

Source: Cabinet Office, "National Accounts," "Indexes of Business Conditions."

GDP Deflator and Income Formation

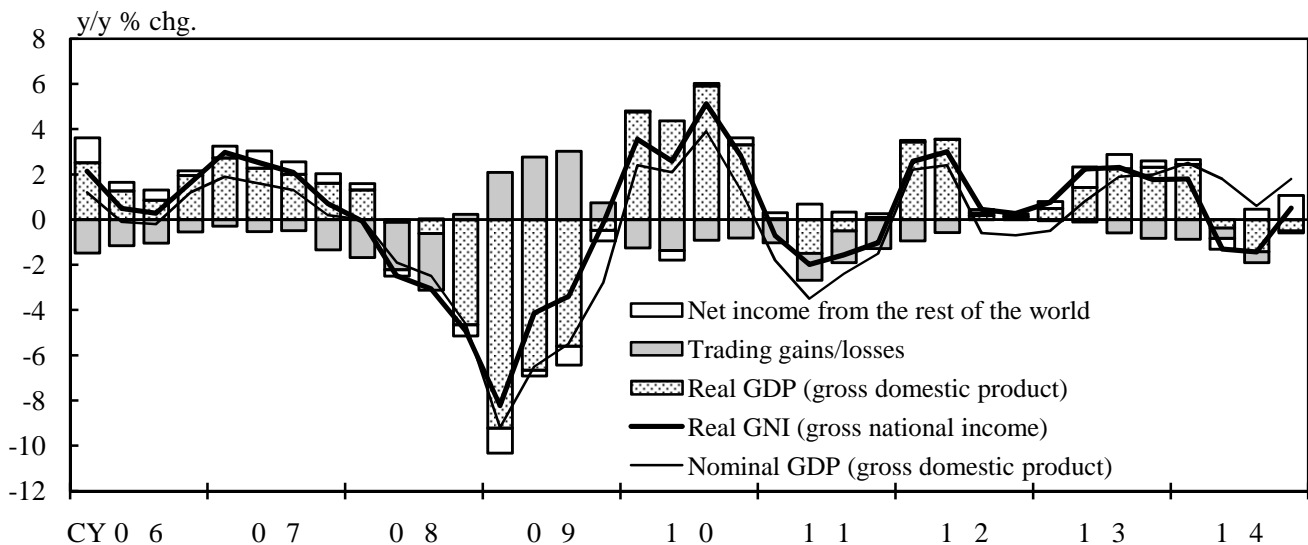

(1) GDP Deflator

(2) Domestic Demand Deflator

(3) Aggregate Income Formation

Notes: 1. Figures of components indicate contributions to changes in real GNI.

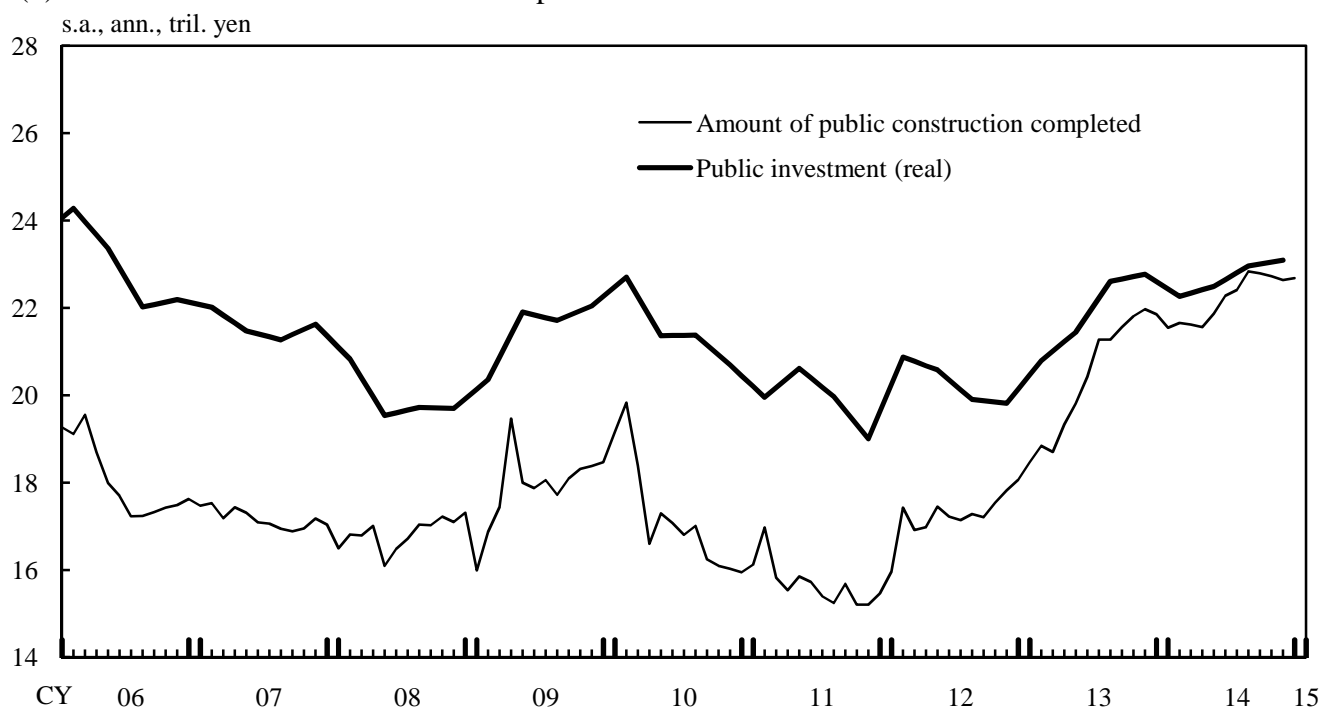

2. Real GNI = real GDP + trading gains/losses + net income from the rest of the world

Trading gains/losses = nominal net exports / weighted average of export and import deflators - real net exports

Source: Cabinet Office, "National Accounts."

## Public Investment

## (1) Amount of Public Construction Completed and Public Investment

## (2) Value of Public Works Contracted

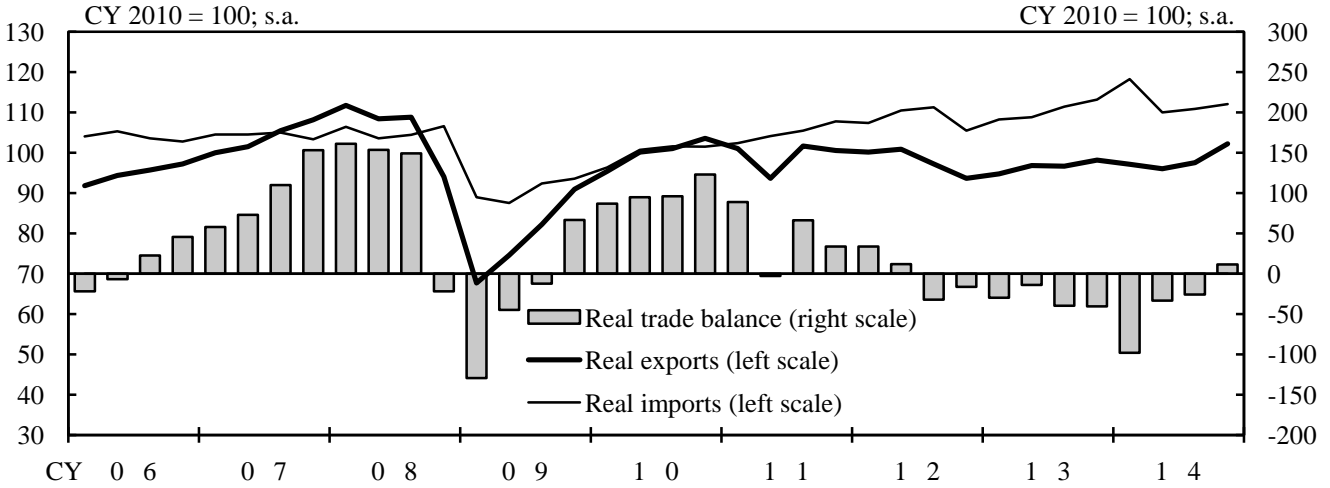

- Notes: 1. Quarterly figures of public investment are plotted at the middle month of each quarter.  
 2. The amount of public construction completed is based on the general tables in the "Integrated Statistics on Construction Works."  
 3. Figures of the value of public works contracted and the amount of public construction completed are seasonally adjusted by X-12-ARIMA. As figures of the amount of public construction completed are seasonally adjusted on a monthly basis, the data are retroactively revised every month.

Sources: Cabinet Office, "National Accounts";  
 East Japan Construction Surety etc., "Public Works Prepayment Surety Statistics";  
 Ministry of Land, Infrastructure, Transport and Tourism, "Integrated Statistics on Construction Works."

External Balance <sup>1</sup>

(1) Real Exports, Real Imports, and Real Trade Balance <sup>2</sup>

(2) Nominal Exports, Nominal Imports, and Nominal Trade Balance <sup>3</sup>

(3) Nominal Current Account Balance and Nominal Goods & Services Balance <sup>3</sup>

Notes: 1. Seasonally adjusted by X-12-ARIMA.

2. Real exports/imports are the value of exports and imports in the "Trade Statistics" deflated by the "Export and Import Price Index." "Real trade balance" is defined as real exports minus real imports.

3. Figures are based on the "Balance of Payments."

Sources: Ministry of Finance, "Trade Statistics"; Ministry of Finance and Bank of Japan, "Balance of Payments"; Bank of Japan, "Corporate Goods Price Index."

Real Exports <sup>1</sup>

## Real Effective Exchange Rate and Overseas Economies

## (1) Real Effective Exchange Rate (Monthly Average)

Notes: 1. Figures are based on the broad index of the BIS effective exchange rate, and those prior to 1994 are calculated using the narrow index.

2. Figures for January and February (up to February 16) 2015 have been calculated using the monthly average of the BOJ's nominal effective exchange rate (the Yen Index).

## (2) Real GDP Growth Rates of Overseas Economies

s.a., ann., q/q % chg.

|                             | CY2012 | 2013 | 2014 | 2014<br>Q1 | Q2   | Q3  | Q4   |
|-----------------------------|--------|------|------|------------|------|-----|------|

| NIEs <sup>1,3</sup>         | 2.2    | 3.0  | n.a. | 2.2        | 1.4  | 4.5 | n.a. |
| ASEAN4 <sup>1,3,4</sup>     | 6.2    | 4.4  | 3.3  | -0.6       | 5.7  | 4.5 | 7.7  |
| Main economies <sup>3</sup> | 3.7    | 3.7  | n.a. | 1.7        | 4.1  | 5.0 | n.a. |

Notes: 1. Figures for each country are based on those released by the government or central bank. Quarterly figures for China are annualized based on quarter-on-quarter changes released by the National Bureau of Statistics of China.

2. Figures are based on those released by the European Commission.

3. Figures are averages of members' real GDP growth rates, weighted by the value of exports from Japan to each country or region.

The members are described below.

Main economies: United States, European Union, and East Asia

East Asia: China, NIEs, and ASEAN4

NIEs: Korea, Taiwan, Hong Kong, and Singapore

ASEAN4: Thailand, Indonesia, Malaysia, and Philippines

4. To calculate the quarterly figures, real GDP growth rates of a member country are seasonally adjusted by the Bank of Japan using X-12-ARIMA.

Real Imports <sup>1</sup>

Notes: 1. Seasonally adjusted by X-12-ARIMA.

2. Shares of each region and goods in 2014 are shown in angle brackets.

3. Data of four members: Thailand, Indonesia, Malaysia, and Philippines.

4. Raw materials are mainly composed of woods, ores, and mineral fuels.

5. Excludes foodstuffs.

6. IT-related goods are composed of computers and units, parts of computers, telecommunication machinery, ICs, audio and visual apparatus, and medical and optical instruments.

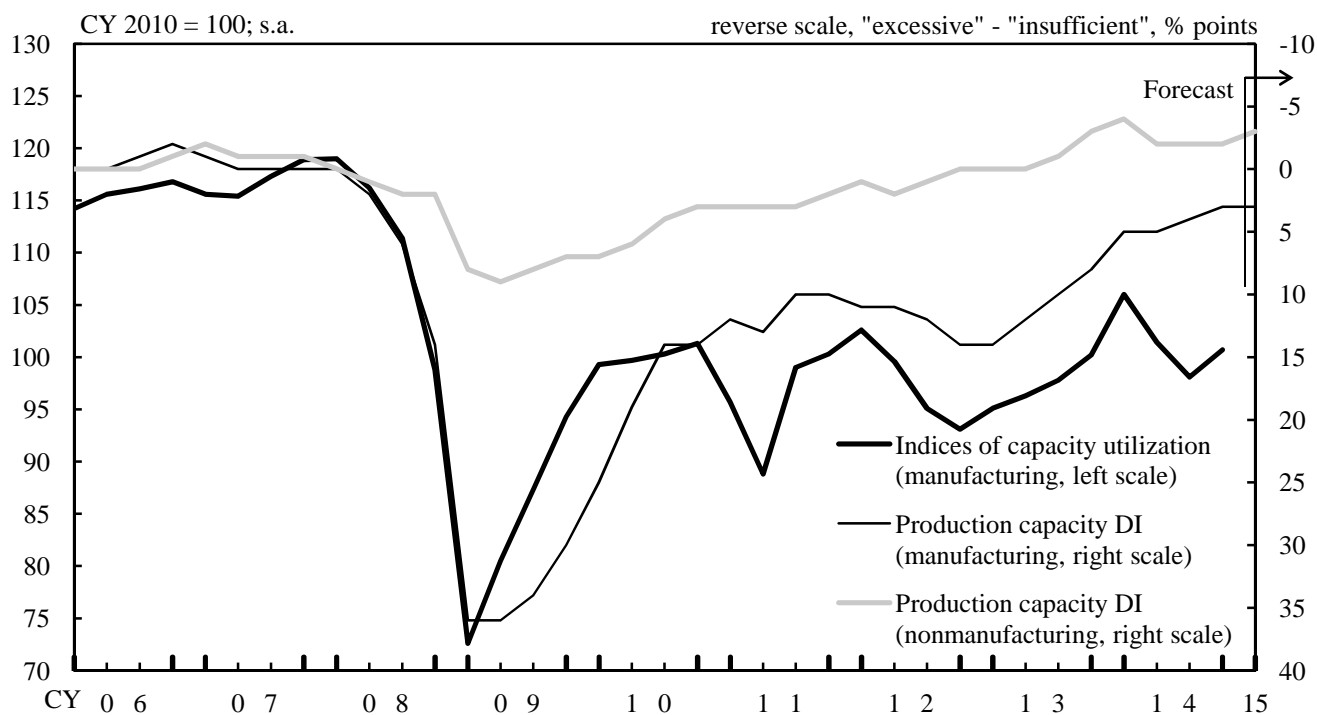

7. Excludes IT-related goods.

Coincident Indicators of Business Fixed Investment

(1) Aggregate Supply and Shipments of Capital Goods

(2) Indices of Capacity Utilization and Production Capacity DI

Note: Production capacity DIs are those of all enterprises.

Sources: Ministry of Economy, Trade and Industry, "Indices of Industrial Production,"  
 "Indices of Industrial Domestic Shipments and Imports";  
 Bank of Japan, "Tankan, Short-term Economic Survey of Enterprises in Japan."

Leading Indicators of Business Fixed Investment

(1) Machinery Orders

Note: Volatile orders: Orders for ships and those from electric power companies.

(2) Construction Starts (Floor Area, Private, Nondwelling Use)

Note: Seasonally adjusted by X-12-ARIMA.

Sources: Cabinet Office, "Orders Received for Machinery";  
 Ministry of Land, Infrastructure, Transport and Tourism, "Statistics on Building Construction Starts."

Indicators of Private Consumption (1)

(1) Breakdown of Private Final Consumption Expenditure (Real)

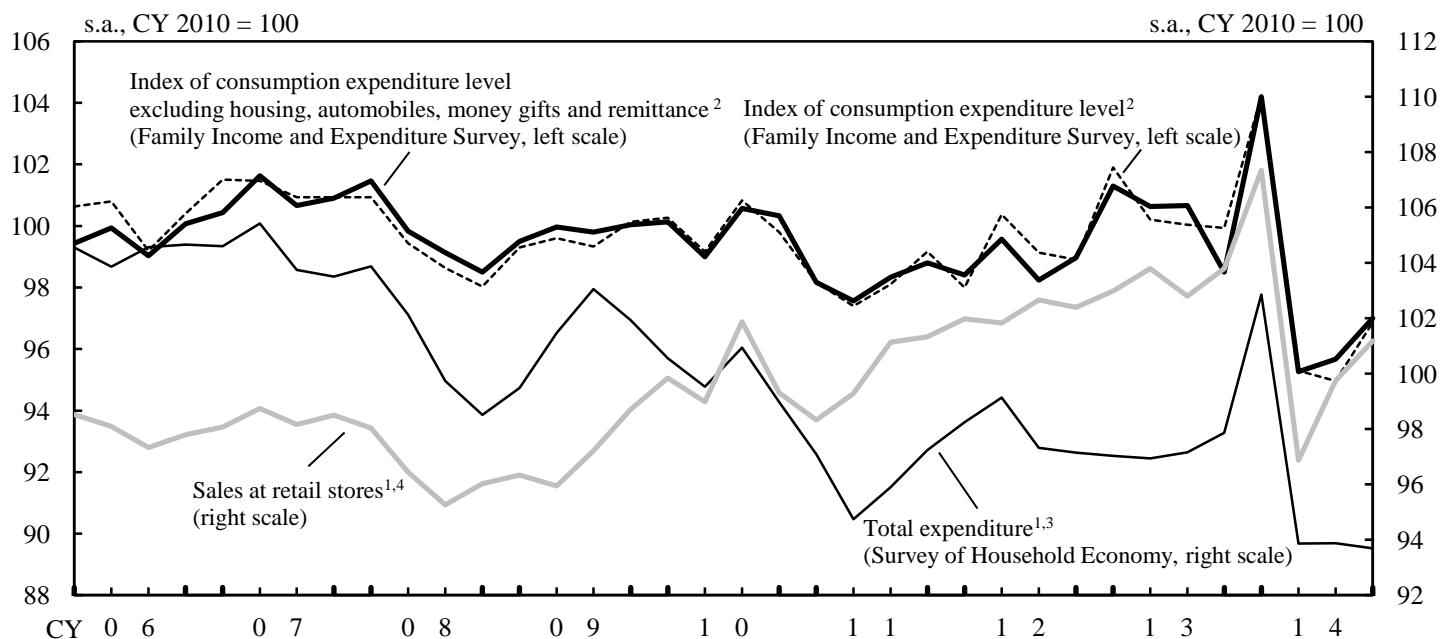

(2) Private Final Consumption Expenditure and Synthetic Consumption Index (Real)

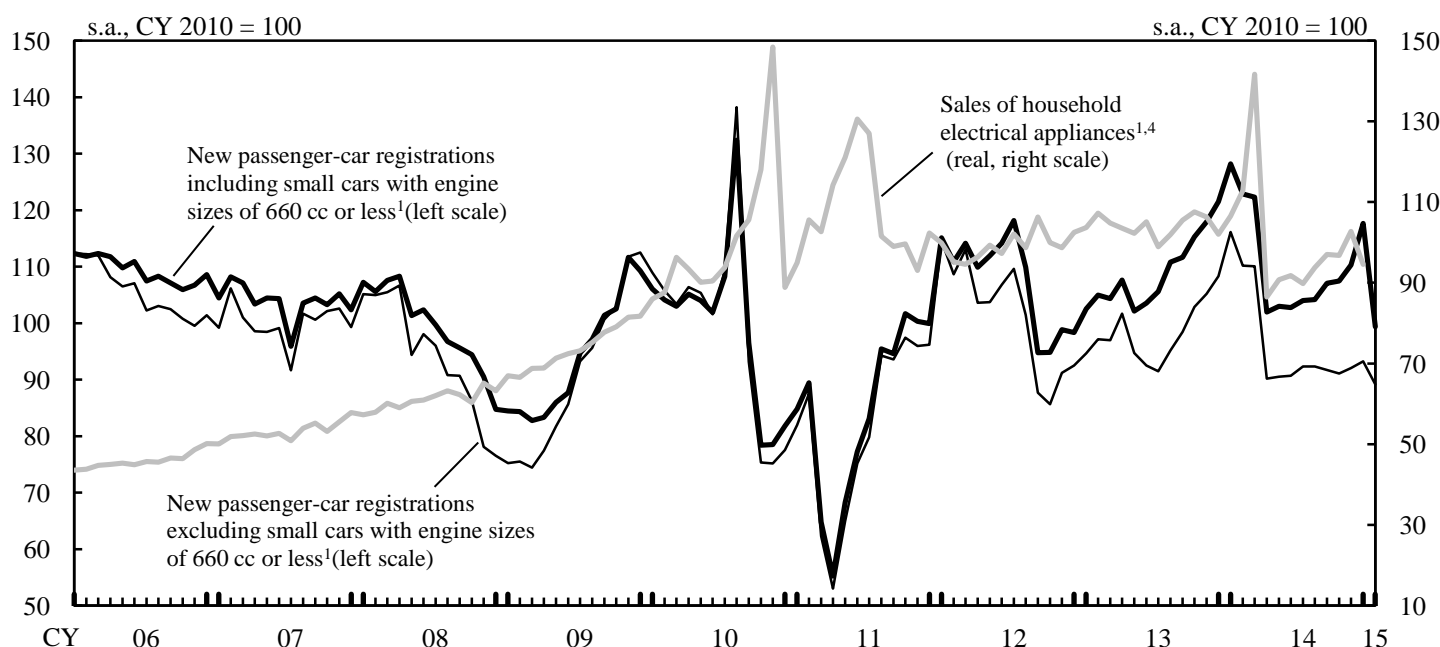

Source: Cabinet Office, "National Accounts," "Synthetic Consumption Index."

## Indicators of Private Consumption (2)

## (1) Household Spending (Real)

## (2) Sales of Durable Goods

Notes: 1. Figures for total expenditure, sales at retail stores, sales of household electrical appliances, and new passenger-car registrations are seasonally adjusted by X-12-ARIMA.

2. Figures for index of consumption expenditure level are based on two-or-more-person households, and are adjusted using the distribution of household by number of household members and age group of household head.

3. Figures for total expenditure are based on two-or-more-person households, and are deflated by the "Consumer Price Index (CPI)" excluding imputed rent.

4. Figures for sales at retail stores are deflated by the CPI for goods (excluding electricity, gas & water charges). Figures for sales of household electrical appliances are calculated as follows: indices of retail sales of machinery and equipment in the "Current Survey of Commerce" are deflated by the geometric means of the corresponding CPI.

Sources: Ministry of Internal Affairs and Communications, "Consumer Price Index,"

"Monthly Report on the Family Income and Expenditure Survey," "Survey of Household Economy";

Ministry of Economy, Trade and Industry, "Current Survey of Commerce";

Japan Automobile Dealers Association, "Domestic Sales of Automobiles";

Japan Light Motor Vehicle and Motorcycle Association, "Sales of Light Motor Vehicles."

Indicators of Private Consumption<sup>1</sup> (3)(1) Sales at Retail Stores (Nominal)<sup>2</sup>

## (2) Consumption of Services (Nominal)

Notes: 1. Seasonally adjusted by X-12-ARIMA.

2. Adjusted to exclude the effects of the increase in the number of stores (except for convenience stores).

3. Excluding those by foreign travelers.

4. There are discontinuities in the underlying data as of April 2007, April 2010, and April 2014 due to changes in the sample. Data from April 2007 and onward are calculated using the year-on-year rates of change.

5. Figures for sales in the food service industry are calculated using the year-on-year rates of change of every month released by the Japan Food Service Association based on the amount of monthly sales in 1993 released by the Food Service Industry Survey & Research Center.

Sources: Ministry of Economy, Trade and Industry, "Current Survey of Commerce";

Japan Tourism Agency, "Major Travel Agents' Revenue";

Food Service Industry Survey & Research Center, "*Getsuji Uriage Doukou Chousa* (Monthly survey on food service sales)"; Japan Food Service Association, "*Gaishoku Sangyou Shijou Doukou Chousa*

(Research on the food service industry)."

# Consumer Confidence<sup>1</sup>

## (1) Seasonally Adjusted Series

## (2) Original Series

## Reference: Economy Watchers Survey (Household Activity)

- Notes: 1. The Consumer Confidence Index (covering about 5,700 samples on a nationwide basis from April 2013 onward) and NRI Consumer Sentiment Index (1,200 samples on a nationwide basis) are based on surveys on consumer confidence.
2. In April 2013, the Cabinet Office changed the method for conducting the Consumer Confidence Survey to a postal method, along with some other changes. For this reason, there is a discontinuity between data up to March 2013, which were obtained from the survey on a visit-and-leave method, and those thereafter. The figure for March 2013 on a postal-method basis is obtained from an examination survey.
3. Figures are plotted for each surveyed month and the data for the intervening months are linearly interpolated.
4. Figures are seasonally adjusted by X-12-ARIMA.

Sources: Cabinet Office, "Consumer Confidence Survey," "Economy Watchers Survey"; Nippon Research Institute (NRI), "Consumer Sentiment Survey."

Indicators of Housing Investment

(1) Housing Starts

(2) Sales of Apartments

Notes: 1. Seasonally adjusted by X-12-ARIMA.  
 2. Figures for 2015/Q1 are those of January.

Sources: Ministry of Land, Infrastructure, Transport and Tourism, "Statistics on Building Construction Starts," etc.

## Production, Shipments, and Inventories

### (1) Production, Shipments, and Inventories

### (2) Production by Industry<sup>1,2,3</sup>

Notes: 1. "Other electrical machinery" is the weighted sum of "electrical machinery" and "information and communication electronics equipment."

2. Figures up to 2008/Q1 are on the 2005 base.

Figures for "general-purpose, production and business oriented machinery" up to 2008/Q1 are those for "general machinery."

3. 2015/Q1 figures are based on the assumption that the production levels in March are the same as those of February.

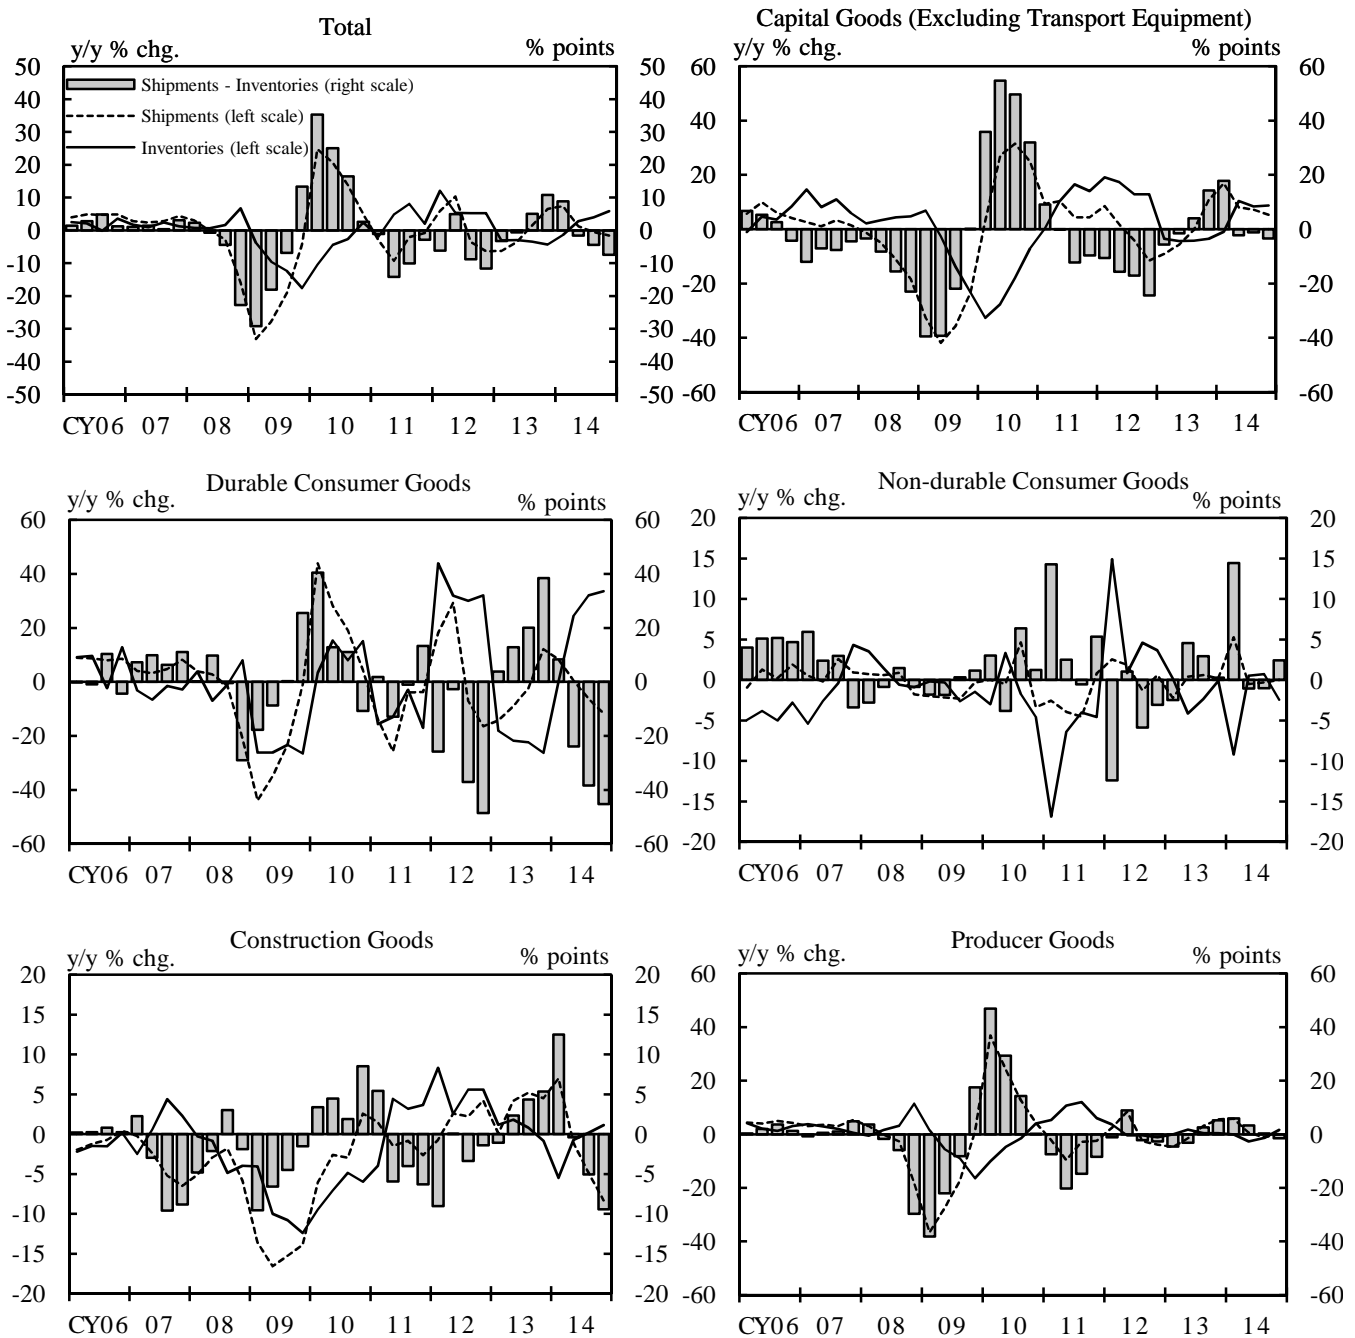

Source: Ministry of Economy, Trade and Industry (METI), "Indices of Industrial Production."

Inventory Cycle

(1) Inventory Cycle (Total)

(2) Shipment-Inventory Balance

Source: Ministry of Economy, Trade and Industry, "Indices of Industrial Production."

Labor Market

(1) Unemployment Rate and Active Job Openings-to-Applicants Ratio

(2) New Job Openings and New Applications<sup>1</sup>

(3) Non-Scheduled Hours Worked<sup>2</sup>

Notes: 1. Excluding new school graduates and including part-timers.

2. Data are for establishments with at least five employees.

Sources: Ministry of Internal Affairs and Communications, "Labour Force Survey";  
Ministry of Health, Labour and Welfare, "Report on Employment Service," "Monthly Labour Survey."

## Wages

(1) Total<sup>1,3</sup>(2) Cash Earnings by Type of Worker<sup>1,3</sup>(3) Breakdown of Scheduled Cash Earnings<sup>1,3</sup>

Notes: 1. Data for the "Monthly Labour Survey" are for establishments with at least five employees.

2. ULC = nominal compensation of employees (SNA) / real GDP

3. Figures for 2014/Q4 are those of December (except ULC).

Except ULC : Q1 = March-May, Q2 = June-August, Q3 = September-November, Q4 = December-February.

ULC : Q1 = April-June, Q2 = July-September, Q3 = October-December, Q4 = January-March.

4. Contributions from scheduled cash earnings of full-time employees and those of part-time employees are calculated as: "scheduled cash earnings of each type of employee (y/y chg.)" times "proportion of the corresponding type's scheduled cash earnings to the previous year's total." Contributions from the effect through changes in proportion of part-time employees are the residuals.

Sources: Ministry of Health, Labour and Welfare, "Monthly Labour Survey"; Cabinet Office, "National Accounts."

Employee Income

(1) Number of Employees<sup>1</sup>

(2) Breakdown of Total Cash Earnings<sup>1,2</sup>

(3) Breakdown of Employee Income<sup>1,2</sup>

Notes: 1. Data for the "Monthly Labour Survey" are for establishments with at least five employees.  
 2. Q1 = March-May, Q2 = June-August, Q3 = September-November, Q4 = December-February.  
 Figures for 2014/Q4 are those of December.  
 3. Calculated as the "number of regular employees" (Monthly Labour Survey) times "total cash earnings" (Monthly Labour Survey).  
 4. Calculated as the "number of employees" (Labour Force Survey) times "total cash earnings" (Monthly Labour Survey).

## Prices

## (1) Level

## (2) Changes from a Year Earlier

Notes: 1. Seasonally adjusted by X-12-ARIMA.

2. Adjusted to exclude a hike in electric power charges during the summer season from July to September.

3. The levels of "Consumer Price Index" up to 2009 are based on the linked indices.

4. Figures of "Services Producer Price Index" and "Producer Price Index" up to 2009 are based on the linked indices.

5. Figures include the consumption tax.

Sources: Ministry of Internal Affairs and Communications, "Consumer Price Index"; Bank of Japan, "Corporate Goods Price Index," "Services Producer Price Index."

Import Prices and International Commodity Prices

(1) Import Price Index and Overseas Commodity Index

(2) Import Price Index (Yen Basis, Changes from a Quarter Earlier and 3 Months Earlier)

Notes: 1. Machinery & equipment: general purpose, production & business oriented machinery, electric & electronic products, and transportation equipment.  
 2. Figures for 2015/Q1 are those of January.

(3) International Commodity Prices

Notes: 1. The "grain index" is the weighted average of prices of three selected items (wheat, soybeans, and corn) in overseas commodity markets. The weights are based on the value of imports in the "Trade Statistics."  
 2. Monthly averages. Figures for February 2015 are averages up to February 17.

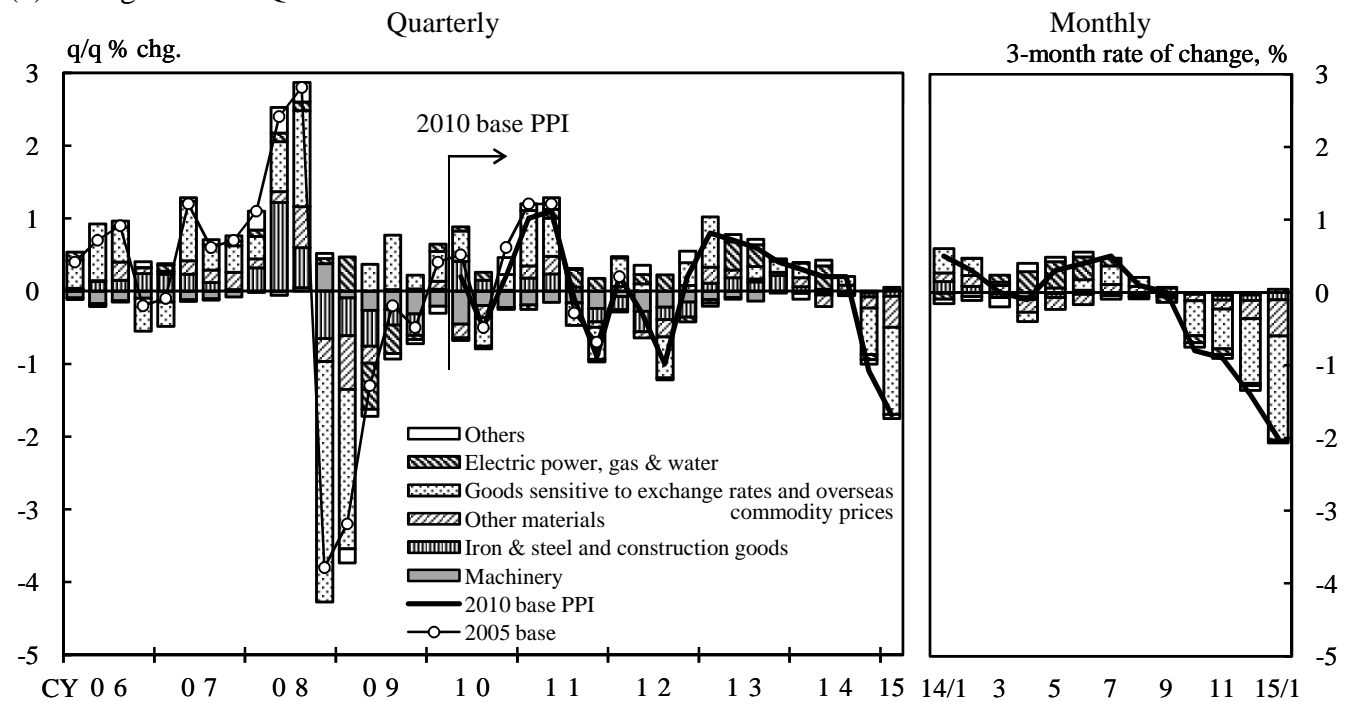

Sources: Bank of Japan, "Corporate Goods Price Index," "Bank of Japan Overseas Commodity Index," etc.

Producer Price Index

(1) Changes from a Year Earlier

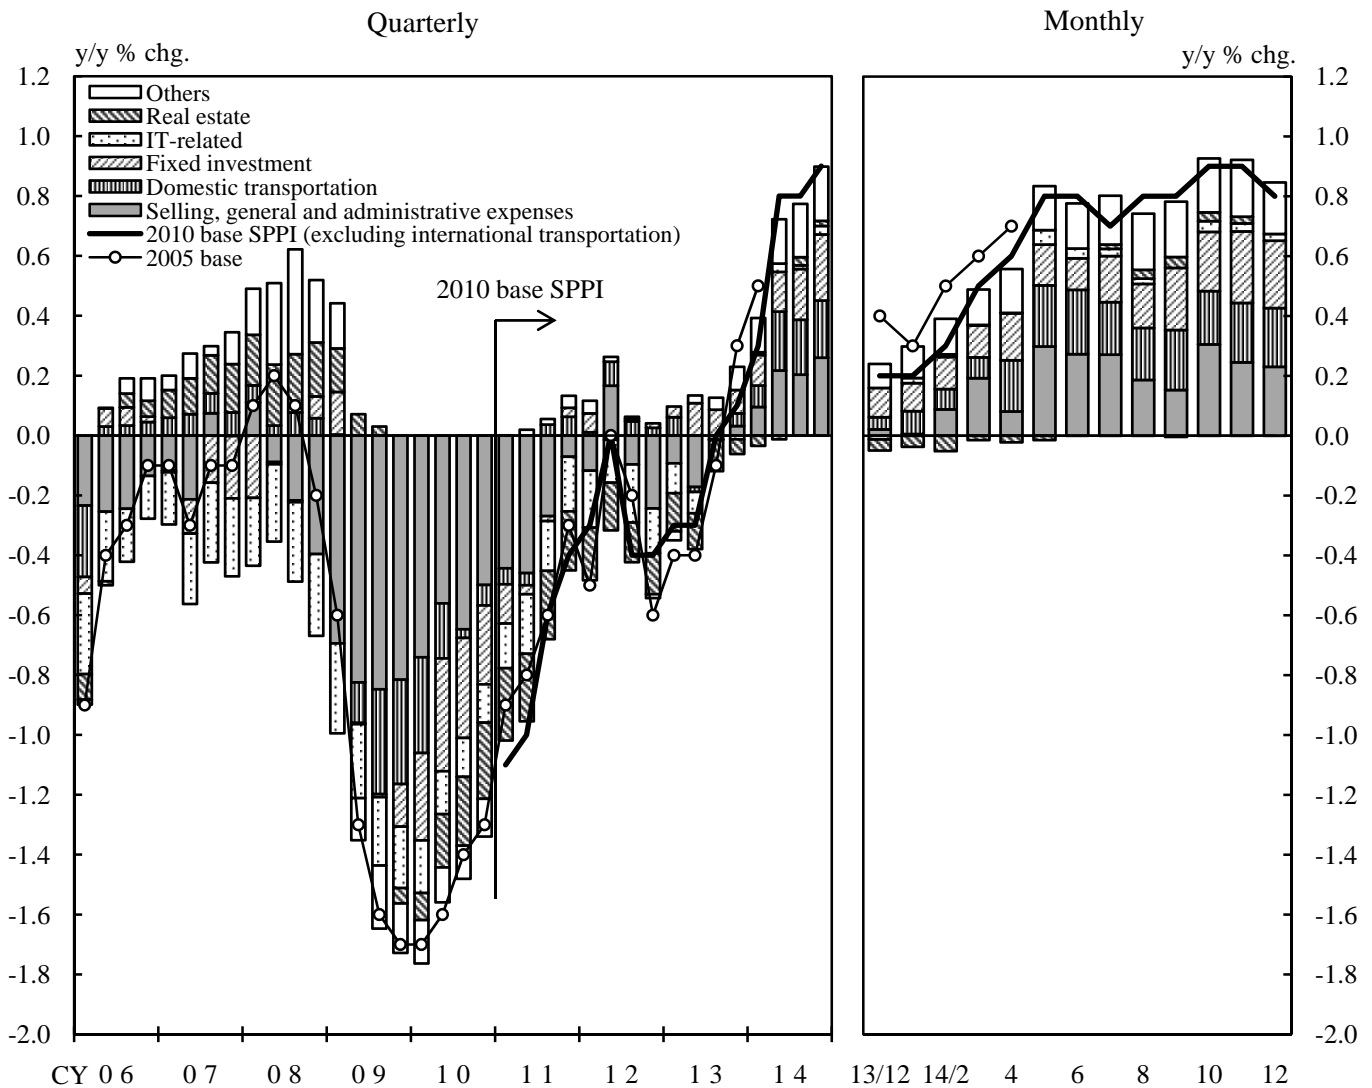

(2) Changes from a Quarter Earlier and 3 Months Earlier<sup>6</sup>

- Notes: 1. Goods sensitive to exchange rates and overseas commodity prices: petroleum & coal products and nonferrous metals.  
 2. Other materials: chemicals & related products, plastic products, textile products, and pulp, paper & related products.  
 3. Iron & steel and construction goods: iron & steel, metal products, ceramic, stone & clay products, lumber & wood products, and scrap & waste.  
 4. Machinery: general purpose machinery, production machinery, business oriented machinery, electronic components & devices, electrical machinery & equipment, information & communications equipment, and transportation equipment.  
 5. Others: food, beverages, tobacco & feedstuffs, other manufacturing industry products, agriculture, forestry & fishery products, and minerals.  
 6. Adjusted to exclude a hike in electric power charges during the summer season from July to September. This adjustment makes the "Producer Price Index" fall by about 0.2%.  
 7. Figures from April 2014 onward are adjusted to exclude the direct effects of the consumption tax hike, using indices excluding the consumption tax.  
 8. Figures for 2015/Q1 are those of January.

Source: Bank of Japan, "Corporate Goods Price Index."

## Services Producer Price Index

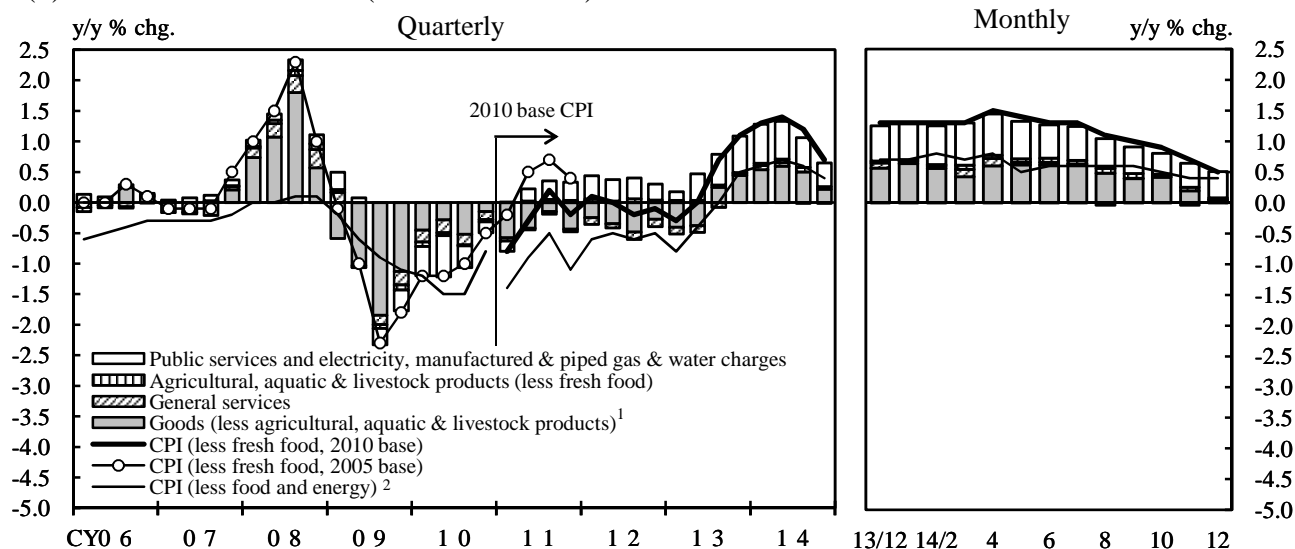

- Notes: 1. Selling, general and administrative expenses: information and communications (excluding newspapers and publishing), advertising services, other services (excluding plant engineering, and civil engineering and architectural services).  
 2. Domestic transportation: transportation and postal services (excluding international transportation, railroad passenger transportation, road passenger transportation, water passenger transportation, and domestic air passenger transportation).  
 3. Fixed investment: leasing and rental (excluding leasing of computer and related equipment and computer rental), and civil engineering and architectural services.  
 4. IT-related: leasing of computer and related equipment, and computer rental.  
 5. Real estate: real estate services.  
 6. Others: finance and insurance, railroad passenger transportation, road passenger transportation, water passenger transportation, domestic air passenger transportation, newspapers and publishing, and plant engineering.  
 7. Figures from April 2014 onward are adjusted to exclude the direct effects of the consumption tax hike, using indices excluding the consumption tax.

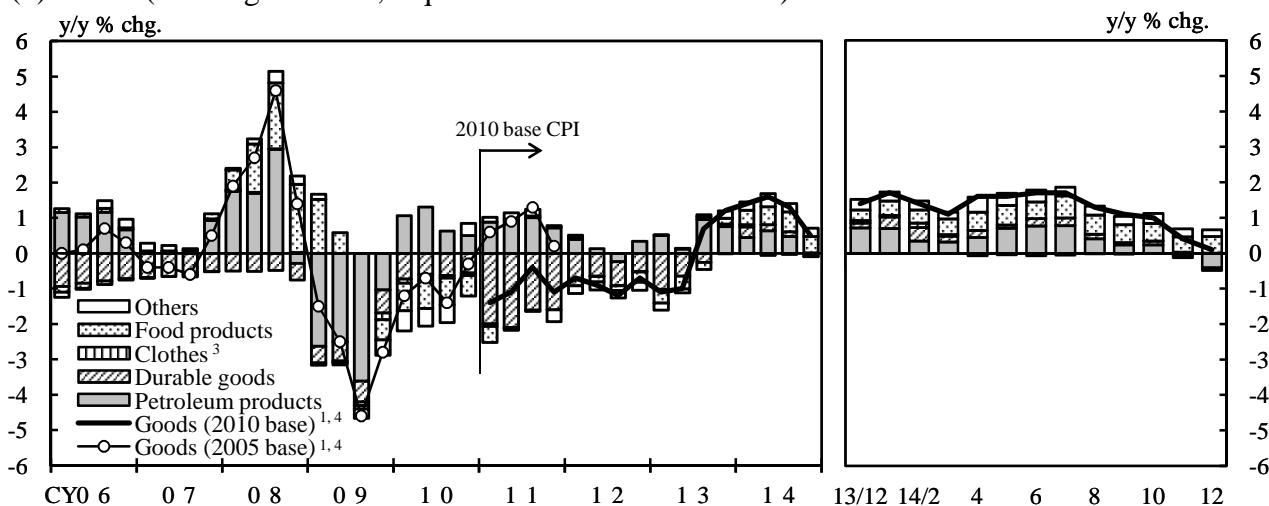

Source: Bank of Japan, "Services Producer Price Index."

# Consumer Price Index (Less Fresh Food)

## (1) Consumer Price Index (Less Fresh Food)

## (2) Goods (Less Agricultural, Aquatic & Livestock Products)¹

## (3) General Services

- Notes: 1. The items are basically the same as those defined by the Ministry of Internal Affairs and Communications. However, electricity, manufactured & piped gas & water charges are excluded from goods.
2. Alcoholic beverages are excluded from food. Energy: electricity, gas manufactured & piped, liquefied propane, kerosene, and gasoline.
3. Including shirts, sweaters & underwear.
4. Less agricultural, aquatic & livestock products.
5. The year-on-year rates of change other than those of the CPI (less fresh food), CPI (less food and energy), and general services are calculated using published indices.
6. Figures from April 2014 onward are estimated to adjust the direct effects of the consumption tax hike.

## Trend Changes in Consumer Prices

## (1) Laspeyres Chain Index

## (2) Trimmed Mean

Notes: 1. Figures for the 10 percent trimmed mean are weighted averages of items; these items are obtained by rearranging year-on-year rates of price change in ascending order and then excluding items in both the upper and lower 10 percent tails by weight.

2. Figures for the Laspeyres chain index for 2006 are the year-on-year rates for the fixed-base method. The year-on-year figures for the Laspeyres chain index up to 2010 are on the 2005 base, and those from 2011 onward are on the 2010 base.

3. Figures from April 2014 onward are estimated to adjust the direct effects of the consumption tax hike.

Source: Ministry of Internal Affairs and Communications, "Consumer Price Index."

Inflation Expectations

(1) Households

(2) Economists

(3) Market Participants

- Notes: 1. The Consumer Confidence Survey asks households to provide their price expectations one year from now. Figures are for all households. The weighted average is calculated based on the following assumption: survey responses chosen by households as their expected inflation rates -- "-5% or below," "from -5% to -2%," "from -2% to 0%," "from 0% to +2%," "from +2% to +5%," and "+5% or above" -- indicate inflation rates of -5%, -3.5%, -1%, +1%, +3.5%, and +5%, respectively. There is discontinuity between figures up to March 2013 and those thereafter due to the change in the survey method in April 2013.
2. Figures are forecasts made every January, April, July, and October. Those up through April 2014 are forecasts made every April and October.
3. Figures are forecasts made every June and December. The effects of the consumption tax hikes are excluded.
4. From the September 2013 survey, the QUICK Monthly Market Survey (Bonds) has asked respondents to include the effects of the consumption tax hikes.
5. Yield spreads between fixed-rate coupon-bearing JGBs and inflation-indexed JGBs. Inflation-indexed JGBs issued since October 2013 are designated as "new," while the rest are designated as "old." Figures for "old (longest)" are calculated using yield data for issue No. 16 of the inflation-indexed JGBs, which matures in June 2018.

# Monetary Base

## (1) Level

## (2) Changes from a Year Earlier

Corporate Finance-Related Indicators

(1) Financial Position

(2) Lending Attitude of Financial Institutions as Perceived by Firms

Notes: 1. Data of the "Tankan" are based on all industries. The "Tankan" has been revised from the March 2004 survey. Figures up to the December 2003 survey are based on the previous data sets. Figures from the December 2003 survey are on the new basis.

2. Figures are quarterly averages of monthly data. Figures for 2015/Q1 are those of January.

3. DI of "Easy" - "Tight."

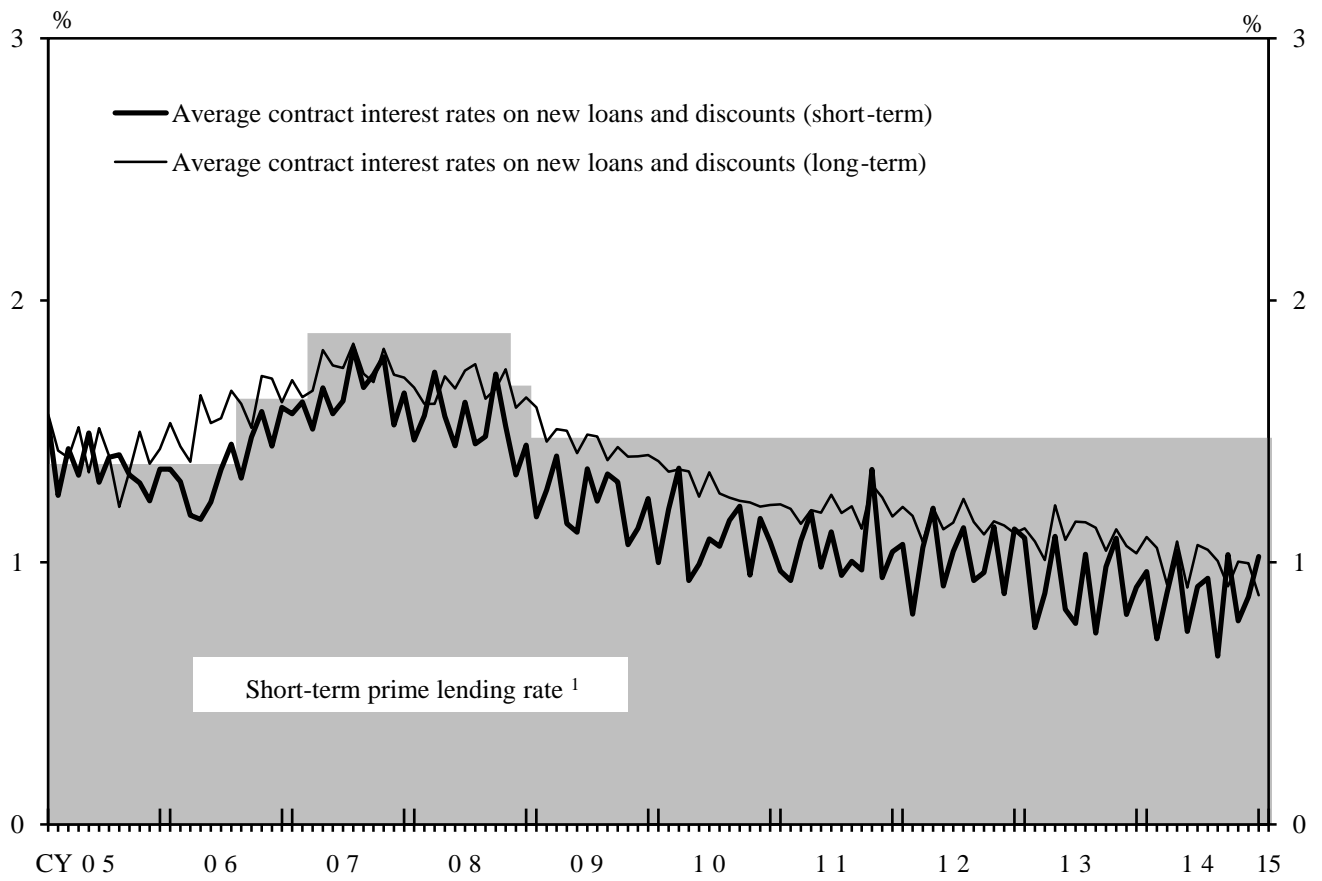

4. DI of "Easier" - "Tighter."

5. DI of "Accommodative" - "Severe."

6. DI of "More accommodative" - "More severe."

Sources: Bank of Japan, "Tankan, Short-term Economic Survey of Enterprises in Japan"; Japan Finance Corporation, "Monthly Survey of Small Businesses in Japan," "Quarterly Survey of Small Businesses in Japan (for micro businesses)."

Lending Rates

Note: 1. Data are at end of period.

Source: Bank of Japan.

## Lending by Financial Institutions

### (1) Lending by Domestic Commercial Banks<sup>1</sup>

### (2) Lending by Domestically Licensed Banks (by Firm Size)

Notes: 1. Percent changes in average amounts outstanding from a year earlier.

2. "Domestic commercial banks" refers to major banks, regional banks I, and regional banks II.

3. Adjusted to exclude

(1) fluctuations due to the liquidation of loans,

(2) fluctuations in the yen value of foreign currency-denominated loans due to changes in exchange rates,

(3) fluctuations due to loan write-offs,

(4) the transfer of loans to the former Japan National Railways Settlement Corporation to the General Account, and

(5) the transfer of loans to the former Housing Loan Administration Corporation to the Resolution and Collection Corporation.

4. Small enterprises are those capitalized at 300 million yen or less or with regular employees of 300 persons or less ("wholesale trade" capitalized at 100 million yen or less or with regular employees of 100 persons or less, "retail trade" and "eating and drinking services" capitalized at 50 million yen or less or with regular employees of 50 persons or less, and "goods rental and leasing," etc. capitalized at 50 million yen or less or with regular employees of 100 persons or less).

5. Other than small enterprises.

Source: Bank of Japan.

## Private-Sector Fund-Raising in the Capital Markets

### (1) Amount Outstanding of Commercial Paper

Note: Figures are those of short-term corporate bonds registered at the book-entry transfer system. Those issued by banks, securities companies and others such as foreign corporations are excluded; ABCPs are included. Figures up to March 2008 are those compiled by the Bank of Japan.

### (2) Amount Outstanding of Corporate Bonds

Note: The figures of percentage changes from the previous year of the amount outstanding of corporate bonds are calculated given the following:

- (1) The sum of straight bonds issued in both domestic and overseas markets is used.
- (2) Bonds issued by banks are included.
- (3) Domestic bonds are those registered at the book-entry transfer system. The series is spliced at April 2008 with the one published by the Japan Securities Dealers Association.

Sources: Japan Securities Depository Center, "Issue, Redemption and Outstanding" (for Corporate Bonds), "Outstanding Amounts of CP by Issuer's category";  
 Bank of Japan, "Principal Figures of Financial Institutions";  
 Japan Securities Dealers Association, "Issuing, Redemption and Outstanding Amounts of Bonds";  
 I-N Information Systems, "Funding Eye."

Money Stock

(1) Changes from a Year Earlier

(2) Ratio of Money Stock to Nominal GDP

- Notes: 1. M1 consists of cash currency and demand deposits; both M2 and M3 consist of cash currency, demand deposits, time deposits and CDs.  
 2. Financial institutions surveyed for M1 and M3 include the Japan Post Bank and OFIs (other financial institutions) in addition to those for M2.  
 3. The figures up to March 2003 are based on the former series.  
 4. Figures for money stock in 2015/Q1 are those of January, and nominal GDP in 2015/Q1 is assumed to be unchanged from the previous quarter.
