Monthly Report of Recent Economic and Financial Developments¹ February 2010

Summary

Japan's economy is picking up mainly due to various policy measures taken at home and abroad, although there is not yet sufficient momentum to support a self-sustaining recovery in domestic private demand.

Exports and production have been increasing. The decline in business fixed investment has been coming to a halt. Private consumption, notably durable goods consumption, is picking up mainly due to policy measures, despite the continued severe employment and income situation. There are some signs that housing investment has stopped decreasing. Meanwhile, public investment is leveling off.

Japan's economic conditions are likely to continue improving, although the pace of improvement is likely to remain moderate for the time being.

The uptrend in exports and production is expected to continue, reflecting continued improvement in overseas economic conditions, although the pace of increase is likely to moderate gradually. Business fixed investment is likely to remain more or less unchanged for the time being, with corporate profits remaining at a low level and the sense of excessive capital stock being strong. Private consumption is likely to remain more or less unchanged for the time being amid the severe employment and income situation, despite the underpinning effect of policy measures. Meanwhile, public investment is likely to decrease gradually.

On the price front, the three-month rate of change in domestic corporate goods prices has recently risen somewhat, reflecting the earlier increase in commodity prices, in spite of the persistent slack in supply and demand conditions for products. Consumer prices (excluding fresh food) have been declining on a year-on-year basis due to the substantial slack in the economy as a whole, but the pace of decline has been moderating mainly reflecting developments in the prices of petroleum products.

1

¹ This report is based on data and information available at the time of the Bank of Japan Monetary Policy Meeting held on February 17 and 18, 2010.

Domestic corporate goods prices are likely to rise somewhat or remain unchanged for the time being. The year-on-year pace of decline in consumer prices is likely to remain more or less unchanged for the time being, and then moderate as the aggregate supply and demand balance improves gradually.

The weighted average of the overnight call rate has been at around 0.1 percent, and interest rates on term instruments have remained more or less unchanged. Meanwhile, the yen's exchange rate against the U.S. dollar, long-term interest rates, and stock prices have remained at more or less the same levels as last month.

The financial environment, with some lingering severity, has continued to show signs of improvement.

The overnight call rate has remained at an extremely low level, and the declining trend in firms' funding costs has continued. The stimulative effects from low interest rates are still constrained by the low level of economic activity and corporate profits, but the degree of constraint has begun to moderate. With regard to credit supply, although many firms still see financial institutions' lending attitudes as severe, firms as a whole regard the situation as improving. Issuing conditions for CP and corporate bonds have remained favorable, except for low-rated corporate bonds. As for credit demand, firms' need to fund working capital and fixed investment has declined, and some firms have reduced the on-hand liquidity that they had accumulated. Against this backdrop, bank lending has declined on a year-on-year basis, partly due to its high growth a year ago. The amount outstanding of corporate bonds has exceeded the previous year's level, while that of CP has declined. In these circumstances, although many firms, mainly small ones, still see their financial positions as weak, on the whole firms' financial positions have continued to improve. Meanwhile, the year-on-year rate of change in the money stock has been at around 3 percent.

1. Economic Developments

<u>Public investment</u> is leveling off. Looking at monthly indicators (Chart 5), on a quarterly basis, the amount of public construction completed—which reflects the progress of public works—decreased slightly in the fourth quarter following the decrease in the third quarter. The value of public works contracted—a measure that reflects public orders—decreased in January compared with the fourth quarter, following the fourth quarter.

Public investment is likely to decrease gradually.²

Real exports have been increasing due to the improvement in overseas economic conditions (Charts 6[1] and 7). Exports increased in the fourth quarter by 8.9 percent compared with the third quarter, after increasing by double digits for two consecutive quarters. Looking at monthly developments, exports have increased for the nine consecutive months since last April.

By destination (Chart 7[1]), exports to East Asia, the United States, and the EU have been increasing since the second quarter. Those to "other regions" have been increasing since the third quarter.

By goods (Chart 7[2]), exports of many goods have been increasing since the second quarter. Exports of capital goods and parts—which turned to an increase later than other goods—have recently shown clearer evidence of increase.

Real imports have increased, albeit with some fluctuations, amid continued increase in production (Charts 6[1] and 9). Imports continued to increase in the fourth quarter, although the pace of increase slowed compared with the third quarter. Looking at monthly developments, imports in December were essentially unchanged, partly as a reaction to the large increase in November.

secondary supplement.

² According to the secondary supplementary budget of fiscal 2009—which passed through the Diet on January 28—public works-related expenditures have been reduced by 0.6 trillion yen. As for the initial fiscal 2010 budget draft of Japan's general account, public works-related expenditures have been reduced by almost 20 percent compared to the initial budget of fiscal 2009; this is a decrease of more than 30 percent compared to the budget of fiscal 2009, after the

By goods (Chart 9[2]), imports of IT-related goods (such as PCs), capital goods and parts, intermediate goods, and consumer goods (such as flat panel TVs) have been increasing. Those of raw materials (such as crude oil) have been on an increasing trend, albeit with some fluctuations, even though they decreased marginally in the fourth quarter. Imports of foodstuffs, meanwhile, have been relatively weak.

The pace of increase in <u>net exports</u>—in terms of the real trade balance—accelerated in the fourth quarter compared with the third quarter, a move that reflects the aforementioned developments in exports and imports (Chart 6[2]). As for the nominal balance on goods and services, the surplus—after returning to a surplus in the second quarter—has been expanding at an extremely moderate pace.

The uptrend in exports is expected to continue, reflecting continued improvement in overseas economic conditions, although the pace of increase is likely to moderate gradually. The growth rate of overseas economies, which has been expanding at a considerably fast pace since the second quarter of 2009, mainly attributable to emerging countries, is likely to decelerate temporarily in 2010, since the effects of production increases—reflected by the restoration of inventories—and the effects to stimulate the economy from the fiscal front are likely to diminish in many countries (Chart 8[2]). Overseas economic conditions are likely to maintain their expanding trend, however, even after such a deceleration.

Imports are expected to continue increasing gradually in response to the improvement in domestic economic conditions.

The decline in <u>business fixed investment</u> has been coming to a halt. The aggregate supply of capital goods and shipments of capital goods (both including and excluding transport equipment)—coincident indicators of machinery investment—increased in the fourth quarter, for the second consecutive quarter (Chart 10[1]). Machinery orders (private demand, excluding orders of shipbuilding and orders from electric power companies)—a leading indicator of machinery

investment—has lately been essentially unchanged (Chart 11[1]).^{3, 4} By industry, in manufacturing, machinery orders decreased in the third quarter, mainly as a reaction to large orders in the previous quarter, but they increased again in the fourth quarter. On the other hand, in nonmanufacturing, machinery orders increased in the third quarter, but decreased in the fourth quarter due to the drop in orders in communications as well as finance and insurance. The decrease in nonmanufacturing in the fourth quarter should not be accepted at face value because the drop in communications was mainly affected by the decrease in cellular phones, most of which are not counted as business fixed investment. Construction starts (floor area, private, nondwelling use)—a leading indicator of construction investment—remained more or less unchanged in the third and fourth quarters, after decreasing substantially in the second quarter (Chart 11[2]).

Looking at the environment surrounding business fixed investment, corporate profits have turned toward an improvement on a quarterly basis, mainly in response to production increases, but they remain at extremely low levels.

Although business fixed investment is expected to pick up gradually, it is likely to remain more or less unchanged for the time being, with corporate profits remaining at a low level and the sense of excessive capital stock being strong.

<u>Private consumption</u>, notably durable goods consumption, is picking up mainly due to policy measures, despite the continued severe employment and income situation (Charts 12 and 13). Consumption of goods, as seen through sales at retail stores (in real terms), increased in the fourth quarter for the third consecutive quarter (Chart 12[1]). As for durable consumer goods, sales of household electrical

³ According to the forecast on machinery orders, in the fourth quarter (seasonally adjusted figures, quarter-on-quarter change, same hereafter), private demand (excluding orders of shipbuilding and orders from electric power companies, same hereafter) was expected to increase by 1.0 percent; manufacturing and nonmanufacturing were likely to rise by 0.4 percent and 1.3 percent, respectively. As for the first quarter, private demand is forecast to increase by 2.0 percent; manufacturing and nonmanufacturing are likely to rise by 2.3 percent and 3.5 percent, respectively.

⁴ Meanwhile, external demand has continued to show an uptrend, while public demand has turned toward a decrease; the former increased by 28.4 percent and the latter decreased by 21.8 percent in the fourth quarter, on a quarter-on-quarter basis. The total value of machinery orders in the fourth quarter increased by 7.8 percent compared with the third quarter.

appliances (in real terms) have been increasing, especially in flat panel televisions, mainly due to the eco-point system (Chart 12[2]). On a monthly basis, however, their pace of increase has become moderate compared to a while ago, as seen in the two-month consecutive decline. The number of new passenger-car registrations has recently been flat, after recovering rapidly mainly due to tax cuts and subsidies. On the other hand, sales at department stores, supermarkets, and convenience stores have continued to show a decreasing trend, although there have been some signs that the pace of decline will moderate compared to a while ago (Chart 13[1]). As for services consumption (Chart 13[2]), outlays for travel in the fourth quarter decreased—amid the continued severe employment and income situation—compared with the third quarter, when they were pushed up by the effects of a string of consecutive holidays in September ("silver week"). Sales in the food service industry have been on a declining trend, mainly due to the drop in customer transaction.

The aggregate supply of consumer goods (Chart 14[1])—which comprehensively captures producers' supply of goods—marked an increase for the third consecutive quarter in the fourth quarter, as a reflection of developments in durable consumer goods (automobiles). Looking at statistics on the demand side, as for the index of consumption expenditure level (in real terms) in the *Family Income and Expenditure Survey*, the index on an "excluding housing, automobiles, money gifts, and remittance" basis—which is mostly limited to items used for estimating GDP—increased in the fourth quarter, following the third quarter (Chart 12[1]). The total expenditure in the *Survey of Household Economy* (in real terms), meanwhile, decreased in the fourth quarter, after increasing for three consecutive quarters.

Meanwhile, indicators related to consumer sentiment have been seesawing in general (Chart 15).

⁵ Items in the index are not completely limited to those used for estimating GDP. Education, for example, is not used for estimating GDP.

Private consumption is likely to remain more or less unchanged for the time being amid the severe employment and income situation, despite the underpinning effect of policy measures.

There are some signs that <u>housing investment</u> has stopped decreasing. The number of housing starts (Chart 16[1])—a leading indicator of housing investment—improved in the fourth quarter, marking an annual rate of 788,000 units, after declining to 717,000 units in the third quarter. On a monthly basis, it increased for the fourth consecutive month. The number of housing starts has begun to improve, albeit at an extremely low level, with the gradual progress in adjustments of inventories and prices. However, the number of housing starts is likely to require more time to show clearer evidence of recovery, mainly because the employment and income situation and the financial environment surrounding the real estate-related sector have remained severe.

Housing investment is likely to show clearer evidence of leveling out over time at a gradual pace, considering the number of housing starts.

<u>Industrial production</u> has been increasing. On a monthly basis, production increased for the tenth consecutive month in December, marking a 1.9 percent rise (Chart 17). On a quarterly basis, after increasing substantially for two consecutive quarters (the second and third quarters), production increased by 4.5 percent in the fourth quarter compared with the third quarter. The level of production, however, is still about 20 percent lower than its latest peak (February 2008).

Shipments increased by 5.2 percent in the fourth quarter compared with the third quarter. By goods (Chart 18), shipments of durable consumer goods and producer goods have picked up significantly from their levels at the beginning of last year. Shipments of capital goods have picked up, though they are still at low levels. Those of construction goods, meanwhile, have remained relatively weak. Shipments of non-durable consumer goods have remained more or less unchanged.

Inventories have decreased moderately. Looking at the shipment-inventory balance by goods (Chart 19), inventory adjustment pressures for durable consumer

goods, electronic parts and devices, and other producer goods (such as chemicals and iron and steel) have disappeared, partly because shipments have picked up. Inventory adjustment pressures for capital goods (excluding transport equipment) have almost disappeared, while those for construction goods have remained strong, which reflects the drop in shipments.

The uptrend in production is expected to continue, as it is for exports, although the pace of increase is expected to moderate gradually. According to anecdotes by firms, production in the first quarter is likely to continue to increase, albeit at a slower pace.⁶

The <u>employment and income situation</u> has continued to remain severe with the high unemployment rate and the significant decrease in employee income.

In the labor market, the ratio of job offers to applicants in December marked 0.46 times (Chart 20[1]); it increased for the fourth consecutive month, but at an extremely slow pace. The unemployment rate in December registered 5.1 percent; it has remained high, moving in the range of 5.0-5.5 percent.⁷

In terms of employment (Chart 21[1]), the number of employees in the *Labour Force Survey* has continued to decline. Its year-on-year pace of decline moderated, albeit marginally, for the first time in three months.⁸ The year-on-year rate of

_

⁶ According to the production forecast index, production in January and February is expected to mark an increase of 1.3 percent and 0.3 percent, respectively, on a month-on-month basis. Production in the first quarter is expected to increase by 3.6 percent compared with the fourth quarter, according to a calculation that assumes the same production levels for February and March. The forecast for the first quarter, however, should not be accepted at face value.

⁷ The unemployment rate has declined compared with last July, when it recorded its highest-ever (5.7 percent), but this seems to have partly reflected movements toward giving up job-hunting altogether. The labor force participation rate has been declining, mainly among the younger and elderly age groups.

⁸ With regard to the Employment Adjustment Subsidy, figures collected from reports on business suspension plans showed that in December, the number of applicants for the Subsidy increased, albeit marginally, for the first time in five months. Conditions to receive the Subsidy have been eased for one year, starting in December 2009. Specifically, until last November, firms were eligible to receive the Subsidy if their monthly average of sales or production volume of the recent three months decreased by five percent or more compared with that of either (i) four to six months ago or (ii) a year ago. Firms whose monthly average decreased by less than five percent were also eligible, however, if their current profits, measured by their latest statement or other

change in the number of regular employees in the *Monthly Labour Survey* has continued to be slightly below 0 percent. The ratio of part-time employees has been on a moderate rising trend (Chart 21[2]). Meanwhile, overtime hours worked, after decreasing substantially, have been picking up gradually (Chart 21[3]).

Nominal wages per employee have continued to decline significantly (Chart 22[1]). Looking in detail at recent trends, special payments have been significantly lower than the previous year's level in response to the drop in corporate profits, and regular payments have continued to drop on a year-on-year basis. Overtime payments, meanwhile, have been essentially on par with the previous year's level, in response to the recovery in the number of working hours especially in the manufacturing industry.

<u>Employee income</u> has decreased substantially, reflecting the aforementioned developments in employment and wages (Chart 22[3]).

Employee income is likely to continue decreasing substantially for the time being, with consideration to the lagged effects from developments in corporate profits and production.

2. Prices

The three-month rate of change in <u>import prices</u> (on a yen basis) has increased somewhat as a reflection of the earlier high levels of international commodity prices (Chart 24). International commodity prices had been on a rising trend, but they have slightly fallen recently. The rising trend in domestic commodity prices has recently come to a pause.

documents, marked a deficit. From December, in addition to the aforementioned requirements, firms are eligible to receive the Subsidy if (i) their monthly average of sales or production volume of the recent three months decreases by ten percent or more compared with that marked two years ago and (ii) their current profits, measured by their latest statement or other documents, mark a deficit.

9

The three-month rate of change in <u>domestic corporate goods prices</u> (adjusted to exclude the effects of seasonal changes in electricity rates, same hereafter)⁹ has recently risen somewhat, reflecting the earlier increase in international commodity prices, in spite of the persistent slack in supply and demand conditions for products (Chart 25). That in domestic corporate goods prices in January increased, albeit marginally, for the first time in four months, marking a 0.3 percent rise. In detail, the three-month rate of increase in prices of "goods sensitive to exchange rates and overseas commodity prices" and "raw materials (other goods)" accelerated; the three-month rate of decline in prices of "iron and steel related goods" and "machinery" moderated.

The year-on-year rate of change in <u>corporate services prices</u> (excluding international transportation) has continued to be negative, a reflection mainly of cost cutting among firms (Chart 26).¹⁰ In detail, prices of advertising services and leasing and rental have fallen largely below the previous year's level, also mainly in response to cost cutting among firms. Prices of items such as transportation (excluding international transportation) and information services have also fallen below the previous year's level, mainly due to weak demand.

Consumer prices (excluding fresh food; year-on-year basis, same hereafter) have been declining due to the substantial slack in the economy as a whole, but the pace of decline has been moderating mainly reflecting the developments in prices of petroleum products (Chart 27). Consumer prices marked a decline of 1.3 percent in December, with the pace of decline moderating by 0.4 percent point from the previous month; the pace of decline has moderated for four consecutive months, after consumer prices recorded their largest-ever decline—2.4 percent—last August. In detail, the pace of decline in prices of goods has moderated as a whole because the pressure by prices of petroleum products has turned upward, although the pace of decline in prices in a wide range of items has been on an accelerating trend. Prices of general services

_

⁹ Figures are adjusted to exclude large seasonal fluctuations in electric power charges to observe the underlying changes in domestic corporate goods prices. Industrial and commercial electric power charges are set relatively high during July-September, when electric power consumption increases substantially.

¹⁰ The category "All items including international transportation" has continued to decrease significantly, on a year-on-year basis, although the pace of decrease has moderated, as the effects of shipping prices, which are lower than their high levels a year ago, have dissipated.

and those of public utility charges have declined significantly; the former have declined mainly in prices of package tours to overseas and the latter, mainly in electricity and city gas charges. Looking at developments on a basis that excludes food and energy, in December, consumer prices declined by 1.2 percent, with the pace of decline expanding by 0.2 percent point compared with the previous month.

Domestic corporate goods prices are likely to rise somewhat or remain unchanged for the time being. The year-on-year pace of decline in consumer prices is likely to remain more or less unchanged for the time being, and then moderate as the aggregate supply and demand balance improves gradually.

3. Financial Developments

(1) Financial Markets

In <u>Japan's money markets</u>, interest rates—including those for somewhat longer terms—have been stable at low levels, with confidence in the Bank of Japan's provision of ample funds spreading among market participants. Meanwhile, the volume of transactions in some markets has remained low. The overnight call rate (uncollateralized) has been at around 0.1 percent. Regarding interest rates on term instruments, the T-Bill rate (3-month) has been in the range of 0.10-0.15 percent. The Euroyen interest rate (3-month) has continued to decline, but the rate has remained high relative to the OIS rates—the OIS rates mainly reflect expectations about future policy interest rates. Interest rates on Euroyen futures have suggested that term funding rates are expected to decline moderately for about a year (Chart 28). In <u>U.S. dollar funding</u>, the LIBOR-OIS spread for the dollar has been stable at a low level (Chart 29).

<u>Yields on 10-year government bonds</u> (newly issued 10-year JGB) have been in a narrow range as a whole; they have recently been in the range of 1.30-1.35 percent (Chart 30).

<u>Yield spreads between corporate bonds and government bonds</u> have been stable for those with high credit ratings, due to steady demand among investors. Spreads on those with low credit ratings have continued to narrow moderately,

although selective stances on investment in corporate bonds have been persistent among investors, as seen in the high levels of yield spreads in some industries (Chart 31).

Stock prices, after having declined, reflecting weak developments of stock prices in the United States and Europe as well as some appreciation of the yen, have recently turned upward somewhat. The Nikkei 225 Stock Average has recently been in the range of 10,000-10,500 yen (Chart 32).

In the <u>foreign exchange market</u>, the yen has remained more or less unchanged against the U.S. dollar; it has recently been traded at around 90 yen. Meanwhile, the yen's nominal effective exchange rate has appreciated somewhat (Chart 33).

(2) Corporate Finance and Monetary Aggregates

The declining trend in firms' <u>funding costs</u> has continued, against the background that the overnight call rate has remained at an extremely low level. Meanwhile, issuance rates on CP have remained more or less unchanged at low levels, and those on corporate bonds have also remained more or less unchanged. The average contracted interest rates on new loans and discounts have been on a declining trend, albeit with some fluctuations (Chart 35).

With regard to credit supply, although many firms still see financial institutions' lending attitudes as severe, firms as a whole regard the situation as improving (Chart 34). Issuing conditions for CP and corporate bonds have remained favorable, except for low-rated corporate bonds. In these circumstances, <u>funding of the private sector</u> has declined on a year-on-year basis, mainly due to the decline in firms' need to fund working capital and fixed investment. Bank lending has declined on a year-on-year basis, partly due to its high growth a year ago (Chart 36). The amount outstanding of CP issued has decreased, partly because of the decline in firms' need to fund working capital. On the other hand, the amount outstanding of corporate bonds issued has been above the previous year's level as a whole (Chart 37), although firms with low credit ratings and those in some industries have continued to face difficulties in issuing corporate bonds.

In these circumstances, although many firms, mainly small ones, still see their financial positions as weak, on the whole firms' financial positions have continued to improve (Chart 34). The <u>number of corporate bankruptcies</u> has continued to decrease; it was down by 21.8 percent in January compared to the previous year's level (Chart 39).

Meanwhile, the year-on-year growth rate of the <u>money stock</u> (M2) has recently been at around 3 percent. Its January reading was 2.9 percent on a year-on-year basis, following 3.1 percent in December (Chart 38).¹¹

¹¹ On an M3 basis, which includes the Japan Post Bank, the year-on-year growth rate has recently been at around 2 percent; its January reading was 2.1 percent, following 2.2 percent in December. The year-on-year growth rate of broadly-defined liquidity has recently been in the range of 1.0-1.5 percent; it increased by 1.2 percent in January, following an increase of 1.0 percent in December.

Notes: 1. All figures in Chart 1 except figures in angle brackets are quarter-on-quarter (month-on-month) changes of seasonal adjusted data.

All figures in Chart 2 except figures in angle brackets are year-on-year changes. For details on seasonal adjustments and data processing/compilation conducted by the Bank of Japan, see notes of the respective charts.

- 2. Figures with "p" indicate preliminary data.
- 3. Excludes small cars with engine sizes of 660 cc or less.
- 4. Excludes orders of shipbuilding and orders from electric power companies.
- 5. Nonmanufacturing is mainly composed of commerce, services, agriculture & fisheries and public utilities industries.
- 6. Data for establishments with at least five regular employees.
- 7. Adjusted to exclude a hike in electric power charges during the summer season.
- 8. Excludes fresh food.
- 9. Excludes international transportation.

Private demand	-0.5	-2.9	-0.8	-0.3	0.5
Private consumption	-0.5	-0.8	0.7	0.4	0.4
Non-Resi. investment	-1.1	-1.3	-0.6	-0.3	0.1
Residential investment	0.1	-0.2	-0.3	-0.2	-0.1
Private inventory	1.0	-0.6	-0.6	-0.1	0.1
Public demand	0.2	0.3	0.3	-0.1	0.1
Public investment	0.0	0.1	0.3	-0.1	-0.1
Net exports of goods and services	-2.7	-0.6	1.8	0.3	0.5
Exports	-2.7	-3.8	1.2	1.1	0.7
Imports	-0.0	3.2	0.6	-0.8	-0.2
Nominal GDP	-1.6	-3.4	-0.1	-0.5	0.2

Note: Figures of components in real GDP indicate contributions to changes in GDP.

(3) Indexes of Business Conditions (Composite Indexes)

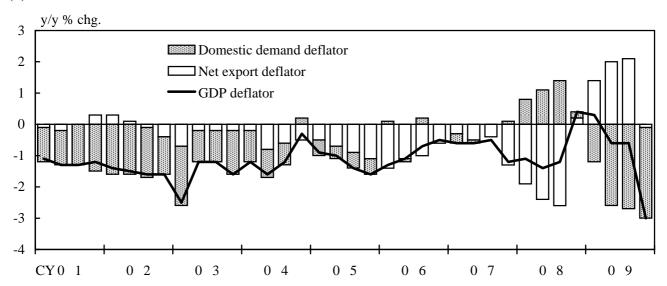

CY 80 81 82 83 84 85 86 87 88 89 90 91 92 93 94 95 96 97 98 99 00 01 02 03 04 05 06 07 08 09

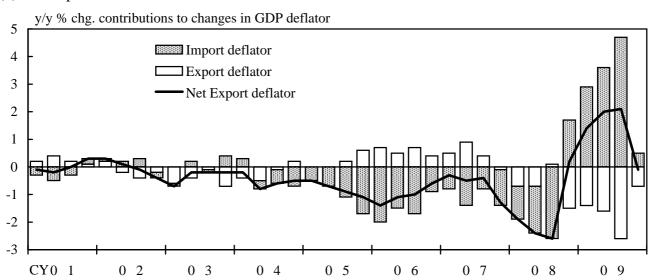

Note: Shaded areas indicate recession periods. Triangle shows the last peak. Source: Cabinet Office, "National Accounts," "Indexes of Business Conditions."

GDP Deflator and Income Formation

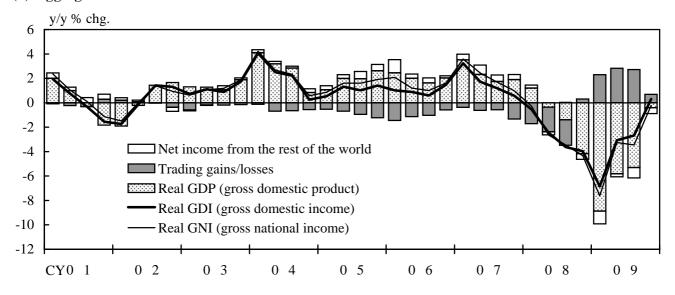

(1) GDP Deflator

(2) Net Export Deflator

(3) Aggregate Income Formation

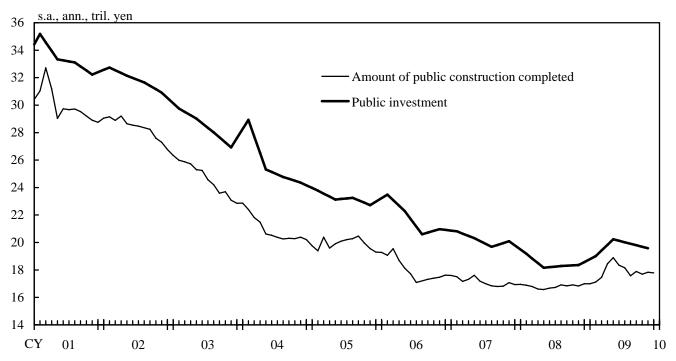

Note: Figures of components indicate contributions to changes in real GNI.

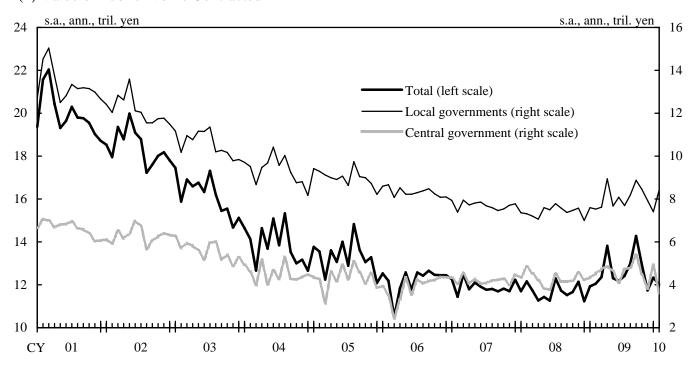

Trading gains/losses = nominal net exports / weighted average of export and import deflators - real net exports Source: Cabinet Office, "National Accounts."

Public Investment

(1) Amount of Public Construction Completed and Public Investment

(2) Value of Public Works Contracted

Notes: 1. Quarterly figures of public investment are plotted at the middle month of each quarter.

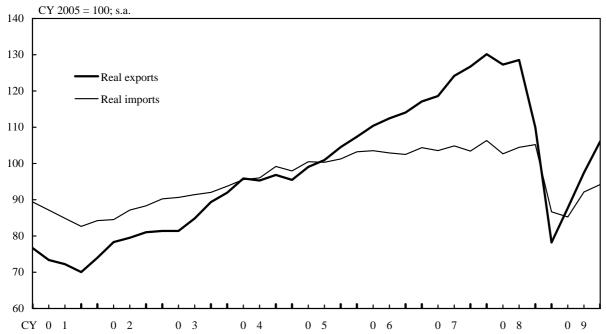

- 2. Amount of public construction completed is based on the general tables in the "Integrated Statistics on Construction Works."
- 3. The figures of value of public works contracted and amount of public construction completed are seasonally adjusted by X-12-ARIMA.

Sources: Cabinet Office, "National Accounts";

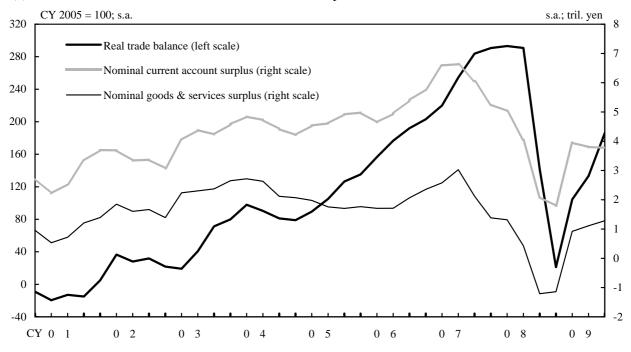

East Japan Construction Surety etc., "Public Works Prepayment Surety Statistics"; Ministry of Land, Infrastructure, Transport and Tourism, "Integrated Statistics on Construction Works."

External Balance

(1) Real Exports and Real Imports

(2) Real Trade Balance and Nominal Current Account Surplus

Notes: 1. Real trade balance is defined as real exports minus real imports, indexed with base year of 2005. Real exports/imports are "The Value of Exports and Imports in Trade Statistics" deflated by the "Export and Import Price Index."

2. Figures are seasonally adjusted by X-12-ARIMA.

Sources: Ministry of Finance, "Trade Statistics";
Ministry of Finance and Bank of Japan, "Balance of Payments";
Bank of Japan, "Corporate Goods Price Index."

Real Exports ¹

Notes: 1. Seasonally adjusted by X-12-ARIMA.

- 2. Shares of each region and goods in 2009 are shown in angle brackets.
- 3. Data of four members: Thailand, Malaysia, the Philippines, and Indonesia.
- 4. Raw materials are mainly composed of woods, ores and mineral fuel.
- 5. Excludes foodstuffs.
- 6. IT-related goods are composed of computers and units, parts of computer, telecommunication machinery, ICs, and medical and optical instruments.
- 7. Excludes IT-related goods.

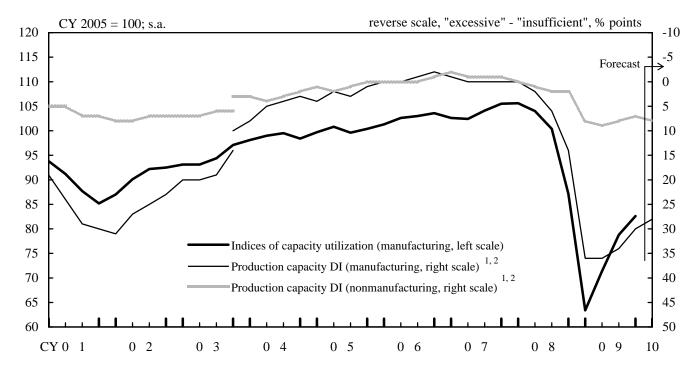

Sources: Ministry of Finance, "Trade Statistics"; Bank of Japan, "Corporate Goods Price Index."

Coincident Indicators for Business Fixed Investment

(1) Aggregate Supply and Shipments of Capital Goods

(2) Indices of Capacity Utilization and Production Capacity DI

Notes: 1. Production capacity DIs are those of all enterprises.

2. The *Tankan* has been revised from the March 2004 survey. Figures up to the December 2003 survey are based on the previous data sets. Figures from the December 2003 survey are on a new basis.

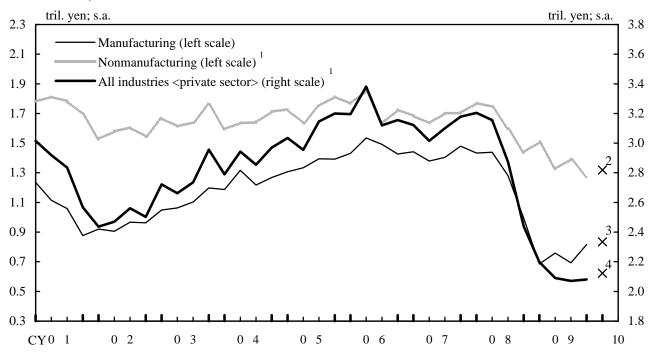

Sources: Ministry of Economy, Trade and Industry, "Indices of Industrial Production,"

"Indices of Industrial Domestic Shipments and Imports";

Bank of Japan, "*Tankan*, Short-term Economic Survey of Enterprises in Japan."

Leading Indicators for Business Fixed Investment

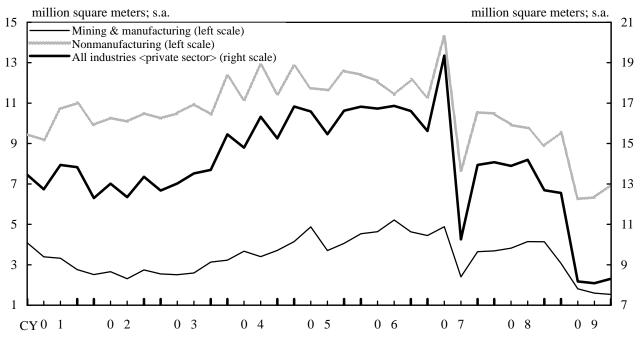

Notes: 1. Excludes orders of shipbuilding and orders from electric power companies.

- 2. Forecast of nonmanufacturing industries for 2010/Q1.
- 3. Forecast of manufacturing industries for 2010/Q1.
- 4. Forecast of all industries <private sector> for 2010/Q1.

(2) Construction Starts (Floor Area, Private, Nondwelling Use)

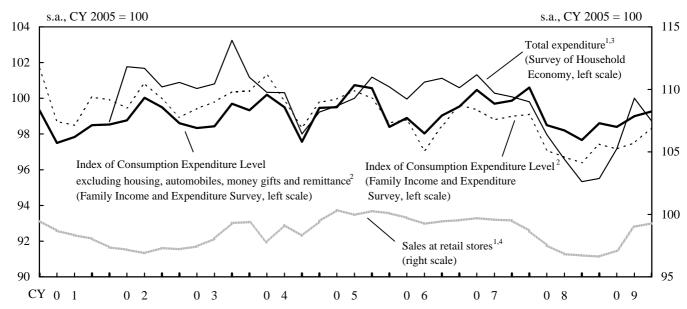

Notes: 1. Seasonally adjusted by X-12-ARIMA.

2. Because the Standard Industrial Classification for Japan was revised in March 2002, the industry classification for newspaper publishing and publishing business was changed from mining and manufacturing to nonmanufacturing. Accordingly, the data up to FY 2002 were adjusted by using a link coefficient.

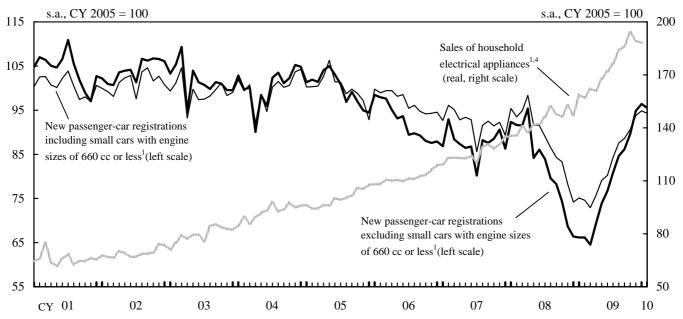

Sources: Cabinet Office, "Orders Received for Machinery";
Ministry of Land, Infrastructure, Transport and Tourism, "Statistics on Building Construction Starts."

Indicators for Private Consumption (1)

(1) Household Spending (Real)

(2) Sales of Durable Goods

Notes: 1. Total expenditure, Sales at retail stores, Sales of household electrical appliances and New passenger-car registrations are seasonally adjusted by X-12-ARIMA.

- 2. Index of consumption expenditure level is based on two-or-more-person households, and is adjusted by the distribution of household by number of household members and age group of household head.
- 3. Total expenditure is based on two-or-more-person households, and is deflated by the consumer price index excluding imputed rent.
- 4. Sales at retail stores are deflated by the consumer price index for goods (excluding electricity, gas & water charges).
 Sales of household electrical appliances are calculated as follows: indices of retail sales of machinery and equipment in the Current Survey of Commerce are deflated by the geometric means of the corresponding consumer price indexes (or by the corporate goods price index for PC printers before 2002).

Sources: Ministry of Internal Affairs and Communications, "Consumer Price Index,"

"Monthly Report on the Family Income and Expenditure Survey," "Survey of Household Economy";

Ministry of Economy, Trade and Industry, "Current Survey of Commerce";

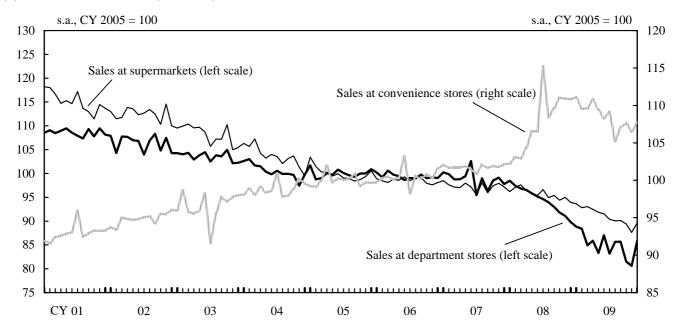

Bank of Japan, "Corporate Goods Price Index";

Japan Automobile Dealers Association, "Domestic Sales of Automobiles";

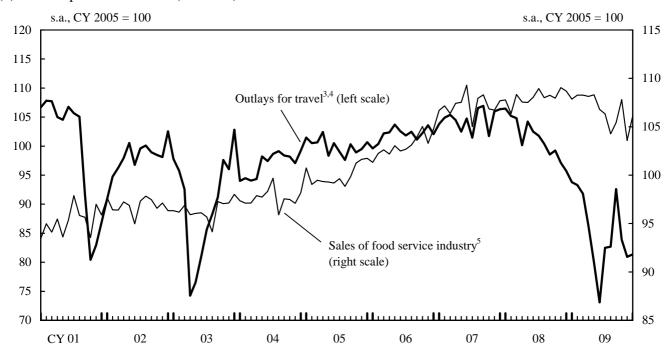

Japan Mini Vehicles Association, "Sales of Mini Vehicles."

Indicators for Private Consumption ¹(2)

(1) Sales at Retail Stores (Nominal)²

(2) Consumption of Services (Nominal)

Notes: 1. Seasonally adjusted by X-12-ARIMA.

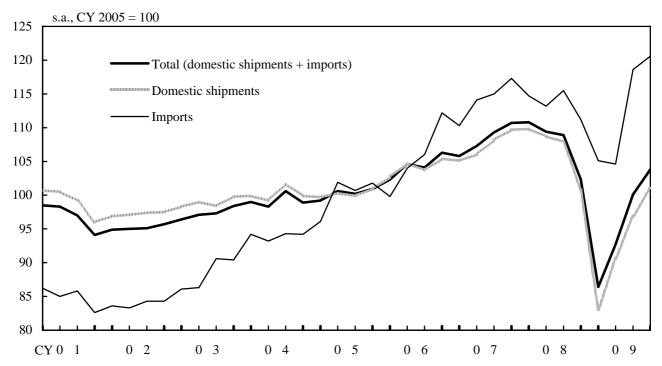

- 2. Adjusted to exclude the effects of the increase in the number of stores (except convenience stores).
- 3. Excluding those by foreign travelers.
- 4. There is a discontinuity in the underlying data as of April 2007 due to changes in the sample.

 Data from April 2007 and onward are calculated using the year-on-year rate of changes on the new basis.
- 5. Sales of food service industry are calculated using the year-on-year rates of change of every month released by the Japan Food Service Association based on monthly sales amounts in 1993 released by the Food Service Industry Survey & Research Center.

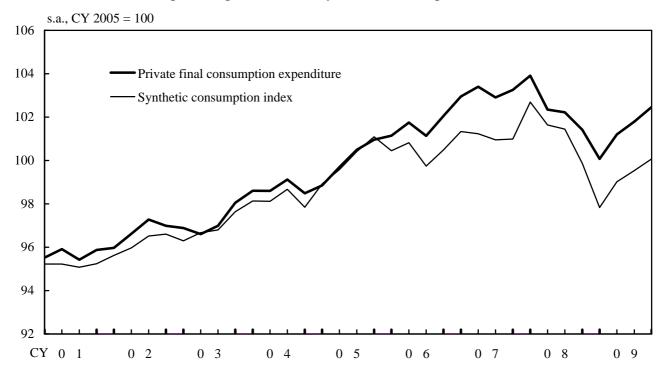

Sources: Ministry of Economy, Trade and Industry, "Current Survey of Commerce";
Japan Tourisum Agency, "Major Travel Agents' Revenue";
Food Service Industry Survey & Research Center, "Getsuji Uriage Doukou Chousa (Monthly Survey of Food Service Sales)"; Japan Food Service Association, "Gaishoku Sangyou Shijou Doukou Chousa (Research on the Food Service Industry)."

Indicators for Private Consumption (3)

(1) Aggregate Supply of Consumer Goods

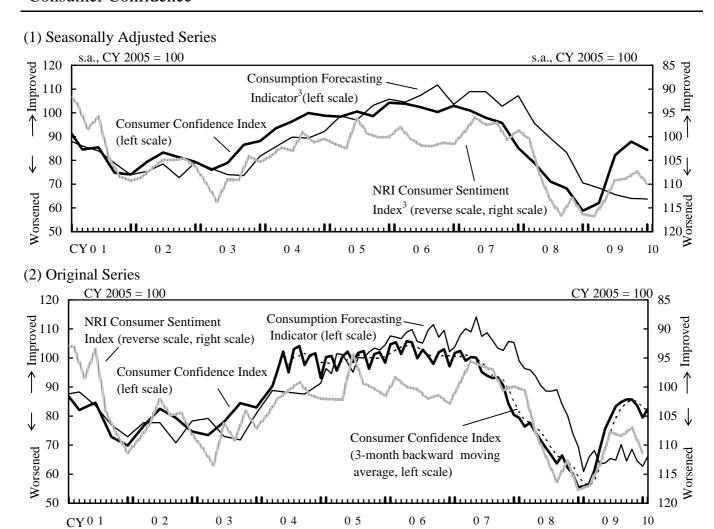

(2) Private Final Consumption Expenditure and Synthetic Consumption Index (Real)

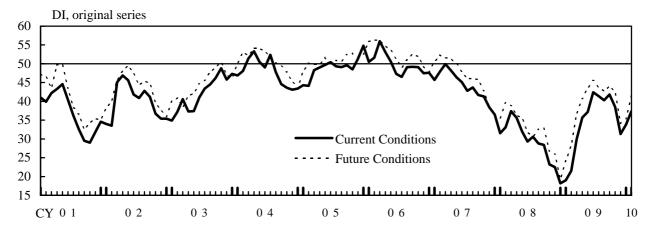

Sources: Ministry of Economy, Trade and Industry, "Indices of Industrial Domestic Shipments and Imports"; Cabinet Office, "National Accounts," "Synthetic Consumption Index."

Consumer Confidence 1,2

Reference: Economy Watchers Survey (Household Activity)

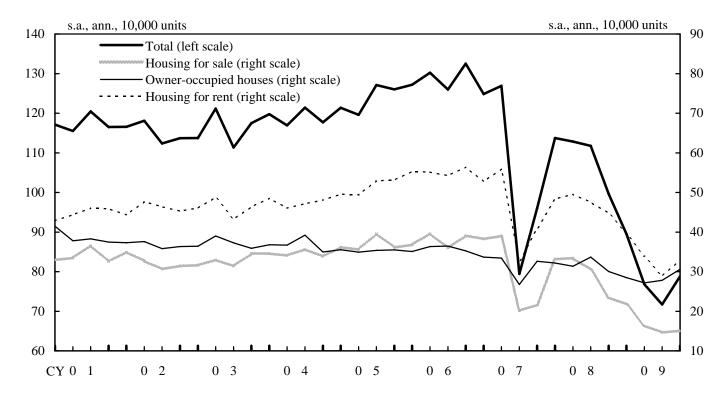

Notes: 1. The Consumer Confidence Index (with about 4,700 samples on a nationwide basis), Consumption Forecasting Indicator (with 600 samples in the metropolitan area), and NRI Consumer Sentiment Index (with 1,200 samples on a nationwide basis) are based on surveys on consumer confidence.

- 2. Figures are plotted for each surveyed months and the data for intervening months are linearly interpolated.
- 3. Figures are seasonally adjusted by X-12-ARIMA. The Consumption Forecasting Indicator is seasonally adjusted using quarterly figures because the survey was quarterly until 2004.

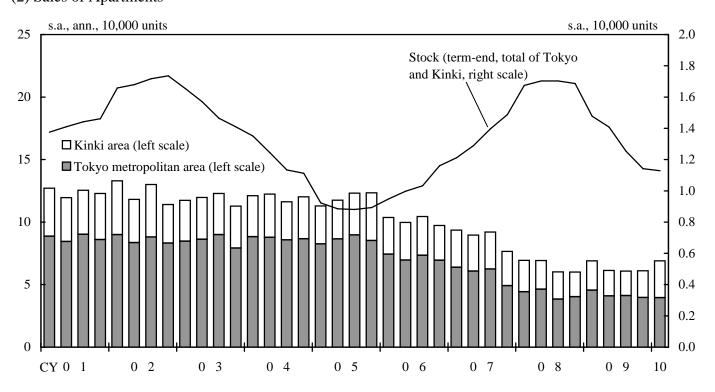

Sources: Cabinet Office, "Consumer Confidence Survey," "Economy Watchers Survey";
Nikkei inc., "Consumption Forecasting Indicator"; Nippon Research Institute (NRI), "Consumer Sentiment Survey."

Indicators for Housing Investment

(1) Housing Starts

(2) Sales of Apartments

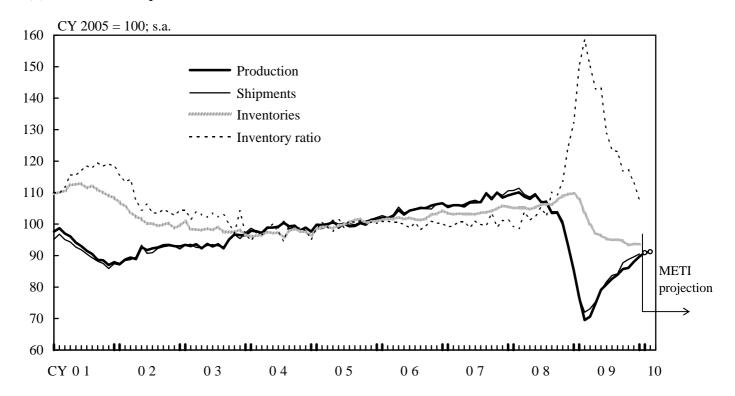

Notes: 1. Seasonally adjusted by X-12-ARIMA.

2. Figures for 2010/Q1 are those of January.

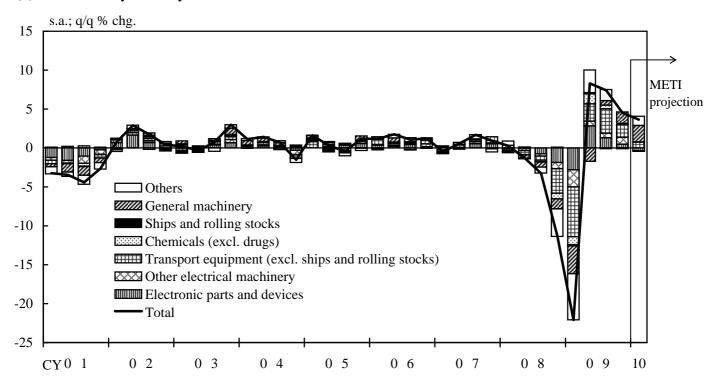

Source: Ministry of Land, Infrastructure, Transport and Tourism, "Statistics on Building Construction Starts," etc.

Production, Shipments and Inventories

(1) Production, Shipments and Inventories

(2) Production by Industry

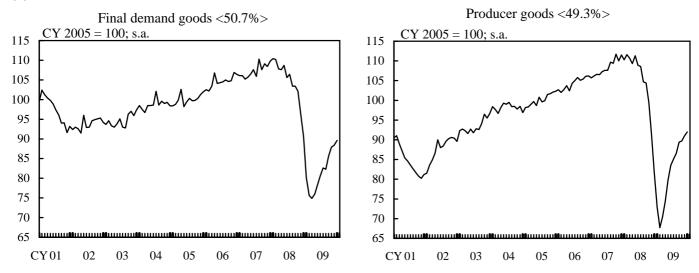

Notes: 1. "Other electrical machinery" is the weighted sum of "electrical machinery" and "information and communication electronics equipment."

- 2. Figures up to 2003/Q1 are on the 2000 base.
- 3. 2010/Q1 figures are based on the assumption that each production level in March is the same as that of February.

Source: Ministry of Economy, Trade and Industry, "Indices of Industrial Production."

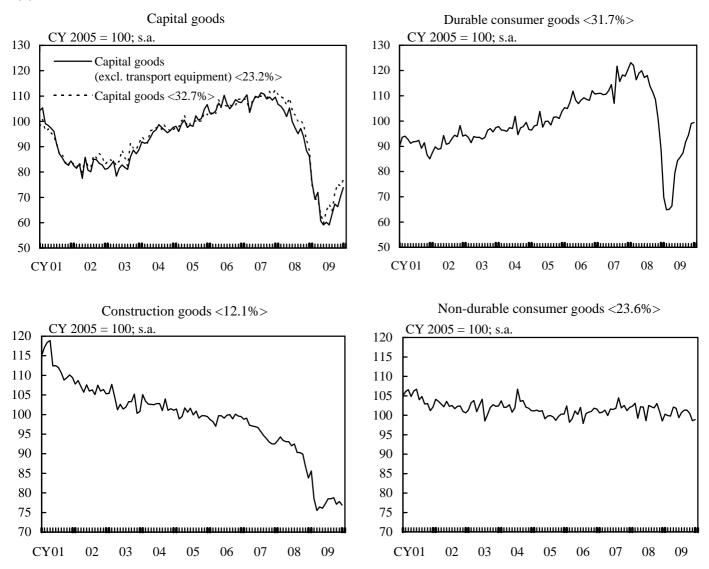

Shipments Breakdown by Type of Goods

(1) Final Demand Goods and Producer Goods

Note: Figures in angle brackets show the shares among shipments of mining and manufacturing.

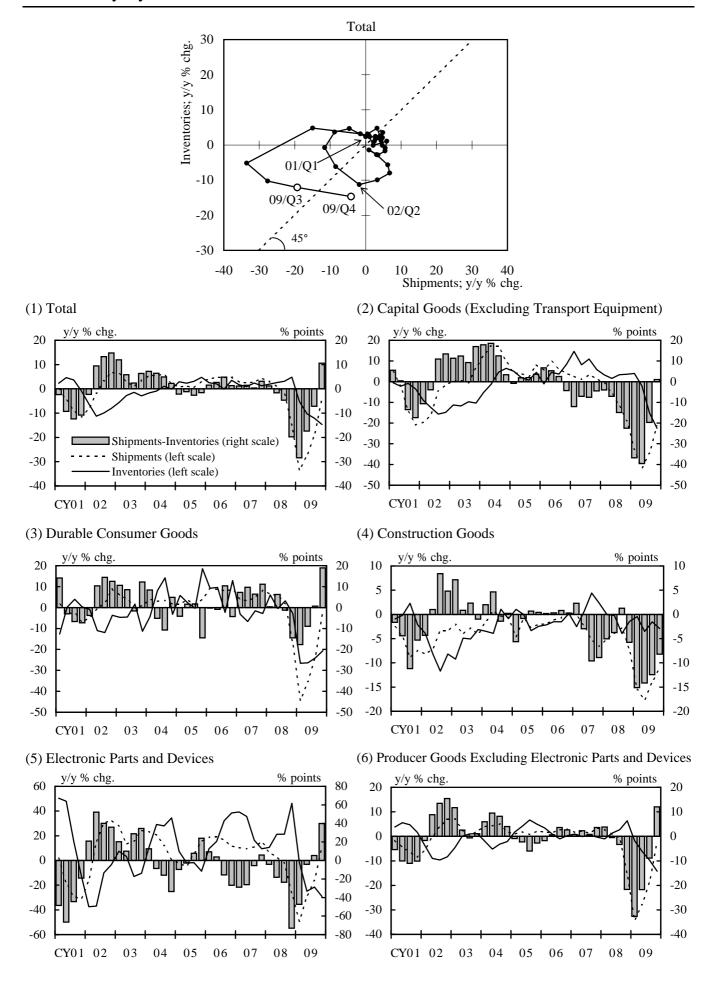

(2) Breakdown of Final Demand Goods

Note: Figures in angle brackets show the shares among shipments of final demand goods.

Source: Ministry of Economy, Trade and Industry, "Indices of Industrial Production."

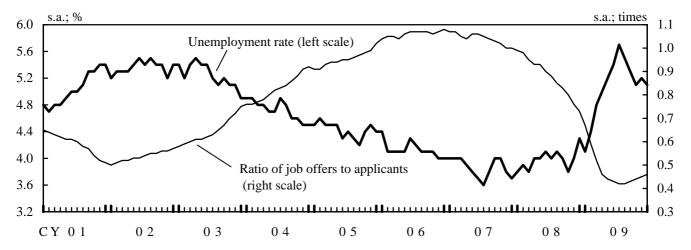

Inventory Cycle

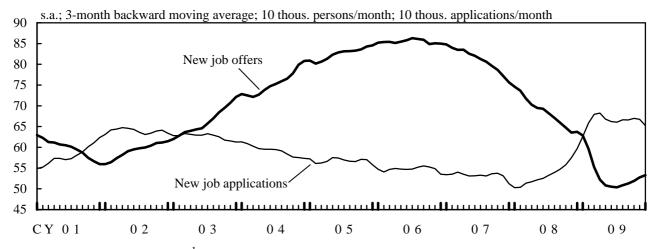

Source: Ministry of Economy, Trade and Industry, "Indices of Industrial Production."

Labor Market (1)

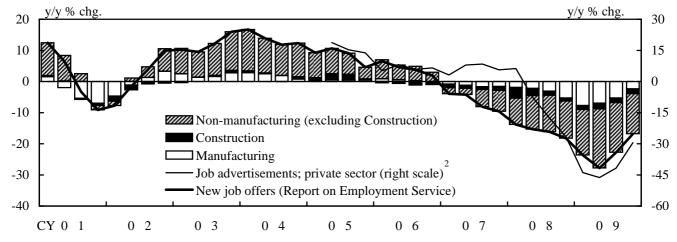

(1) Unemployment Rate and Ratio of Job Offers to Applicants

(2) New Job Offers and New Job Applicants¹

(3) Breakdown of Job Offers¹

Notes: 1. Figures do not include jobs offered to new graduates, but include those offered to part-time workers.

2. Figures are the sum of job advertisements listed in free/paid job information magazines, newspaper inserts and job information websites provided by member companies of the Association.

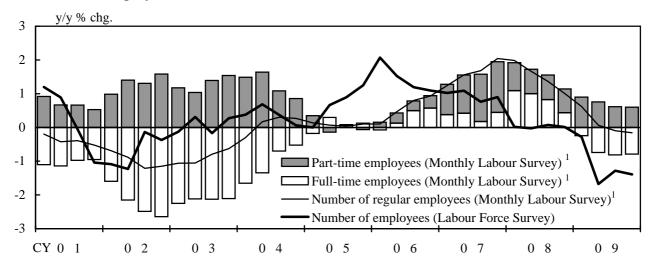

Sources: Ministry of Health, Labour and Welfare, "Report on Employment Service";

Ministry of Internal Affairs and Communications, "Labour Force Survey";

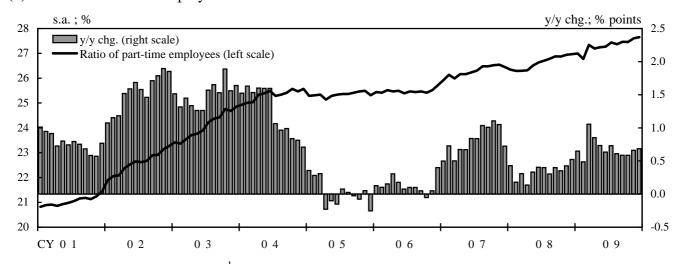

Association of Job Information of Japan, "Kyujin Koukoku Keisaikensu" (Survey of Job Advertisements)."

Labor Market (2)

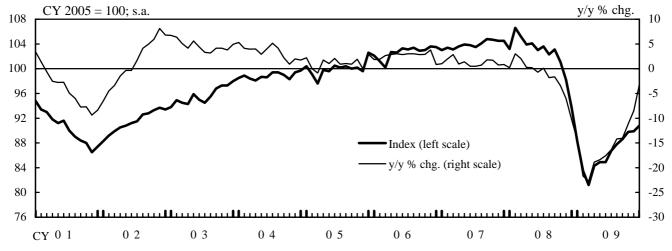

(1) Number of Employees

(2) Ratio of Part-Time Employees^{1,2}

(3) Non Scheduled Hours Worked¹

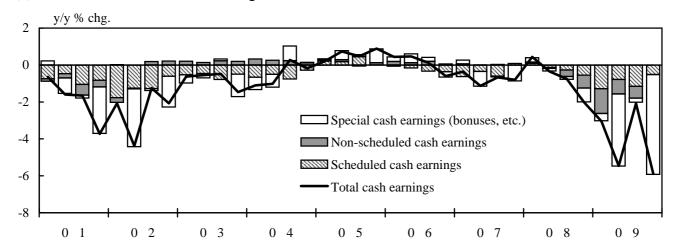

Notes: 1. Data are for establishments with at least five employees.

2. The ratio of part-time employees is calculated as the number of part-time employees divided by the number of regular employees times 100.

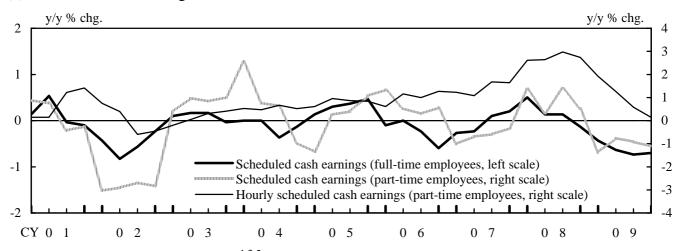

Sources: Ministry of Health, Labour and Welfare, "Monthly Labour Survey";
Ministry of Internal Affairs and Communications, "Labour Force Survey."

Employee Income

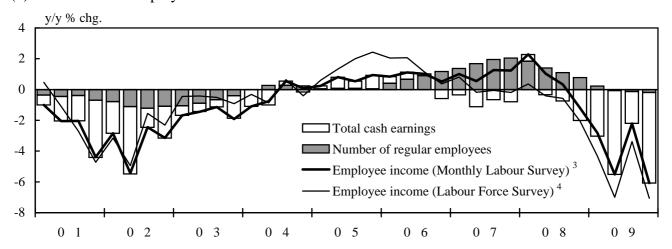

(1) Breakdown of Total Cash Earnings^{1,2,5}

(2) Scheduled Cash Earnings¹

(3) Breakdown of Employee Income^{1,2,5}

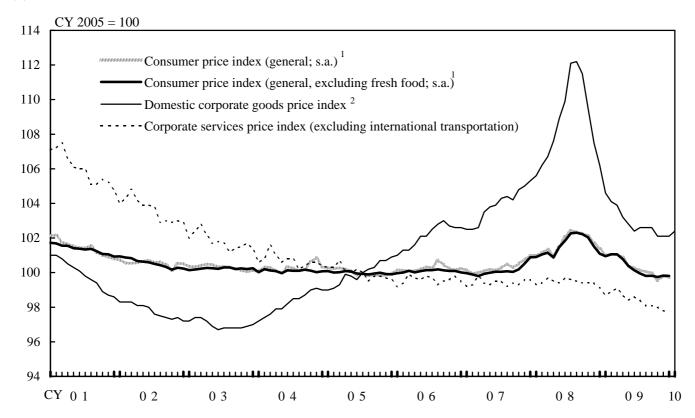

Notes: 1. Data of the Monthly Labour Survey are for establishments with at least five employees.

- 2. Q1 = March-May, Q2 = June-August, Q3 = September-November, Q4 = December-February.
- 3. Calculated as the number of regular employees (Monthly Labour Survey) times total cash earnings (Monthly Labour Survey).
- 4. Calculated as the number of employees (Labour Force Survey) times total cash earnings (Monthly Labour Survey).
- 5. Figures for 2009/Q4 are those of December.

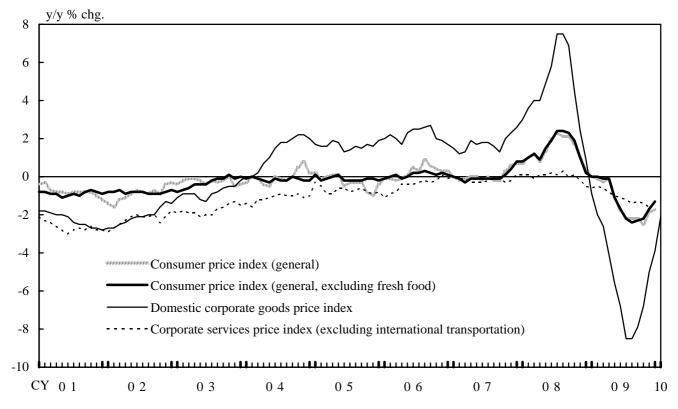

Sources: Ministry of Health, Labour and Welfare, "Monthly Labour Survey"; Ministry of Internal Affairs and Communications, "Labour Force Survey."

Prices

(1) Level

(2) Changes from a Year Earlier

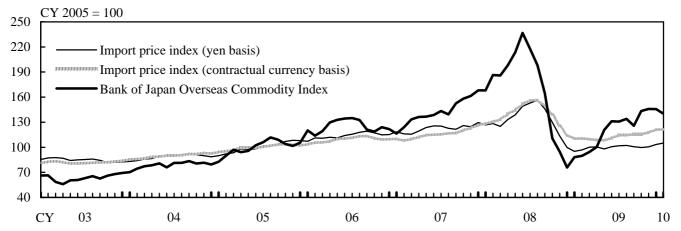

Notes: 1. Seasonally adjusted by X-12-ARIMA.

2. Adjusted to exclude a hike of electric power charges during the summer season from July to September.

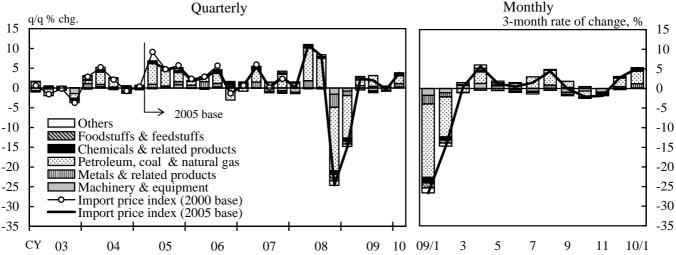

Sources: Ministry of Internal Affairs and Communications, "Consumer Price Index"; Bank of Japan, "Corporate Goods Price Index," "Corporate Services Price Index."

Import Prices and International Commodity Prices

(1) Import Price Index and Overseas Commodity Index

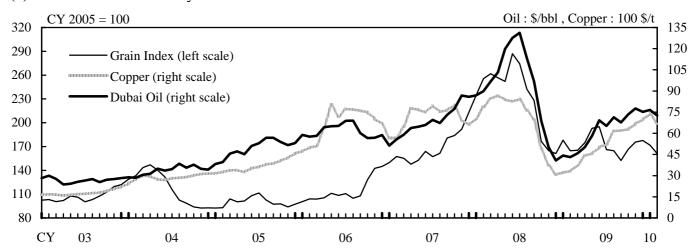

(2) Import Price Index (Yen Basis, Changes from a Quarter Earlier and 3 Months Earlier)

Notes: 1. Machinery & equipment: general machinery, electric & electronic products, transportation equipment, precision instruments.

2. Figures for 2010/Q1 are those of January. Figures for 2007/Q4 on the 2000 base are those of October.

(3) International Commodity Prices

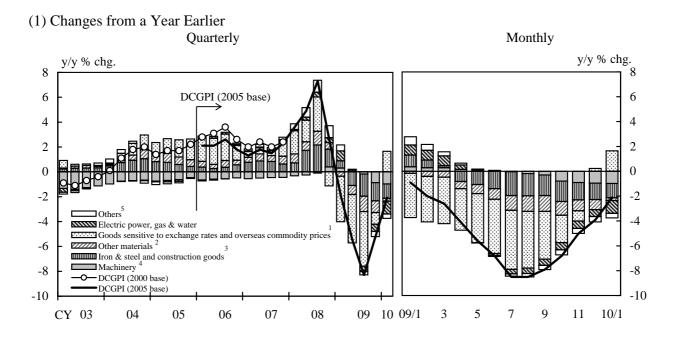

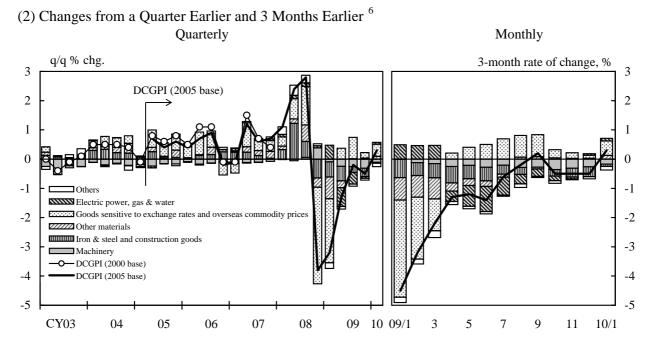

Notes: 1. The Grain Index is the weighted average of prices of three selected items (wheat, soybeans, corn) in overseas commodity markets. The weights are based on the Value of Imports in the Trade Statistics of Japan.

2. Monthly averages. Figures for February 2010 are the averages up to February 17.

Sources: Bank of Japan, "Corporate Goods Price Index," "Bank of Japan Overseas Commodity Index," etc.

Domestic Corporate Goods Price Index⁷

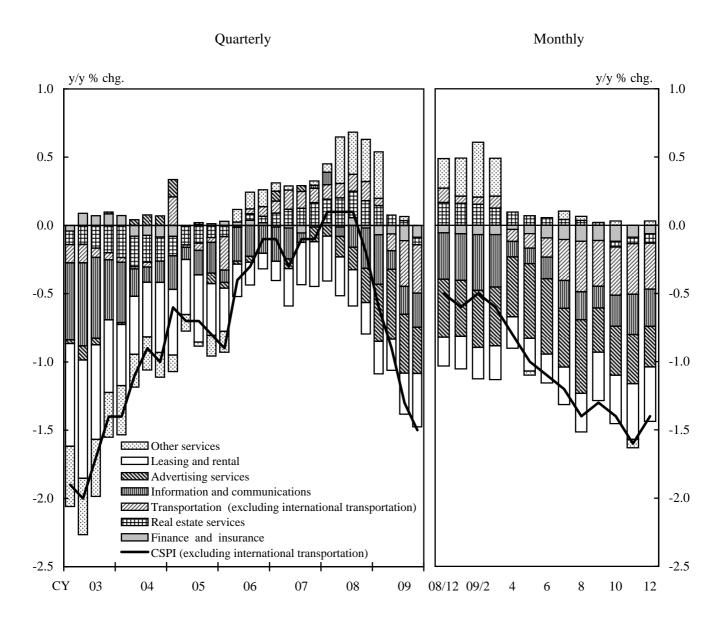

Notes: 1. Goods sensitive to exchange rates and overseas commodity prices: petroleum & coal products, nonferrous metals.

- 2. Other materials: chemicals & related products, plastic products, textile products, pulp, paper & related products.
- 3. Iron & steel and construction goods: iron & steel, metal products, ceramics, stone & clay products, lumber & wood products, scrap & waste.
- 4. Machinery: electrical machinery & equipment, information & communications equipment, electronic components & devices, general machinery & equipment, transportation equipment, precision instruments.
- 5. Others: processed foodstuffs, other manufacturing industry products, agriculture, forestry & fishery products, minerals.
- 6. Adjusted to exclude a hike in electric power charges during the summer season from July to September. This effect makes the Domestic Corporate Goods Price Index rise by about 0.2%.
- 7. Figures for 2010/Q1 are those of January. Figures for 2007/Q4 on the 2000 base are those of October.

Source: Bank of Japan, "Corporate Goods Price Index."

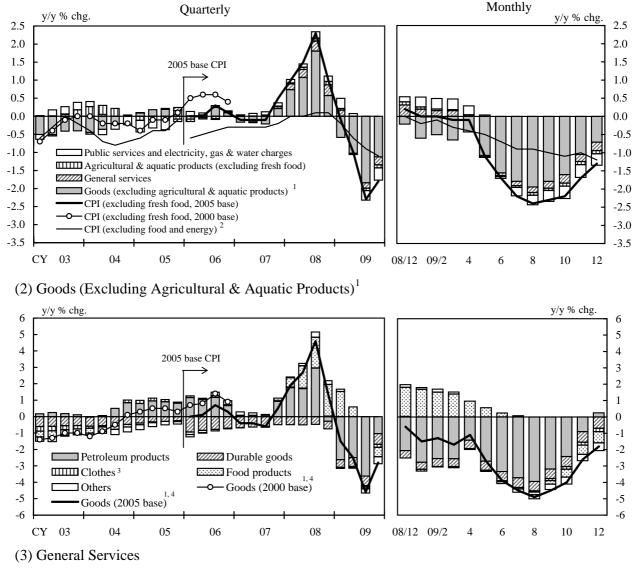

Corporate Services Price Index

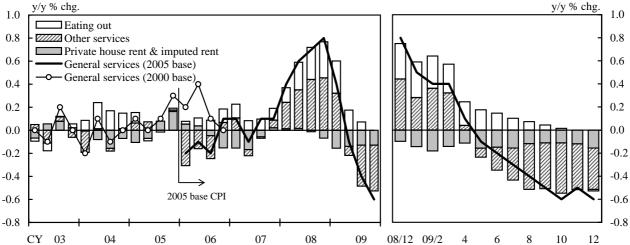

Source: Bank of Japan, "Corporate Services Price Index."

Consumer Price Index (Excluding Fresh Food)

(1) Consumer Price Index (Excluding Fresh Food)

Lending Rates

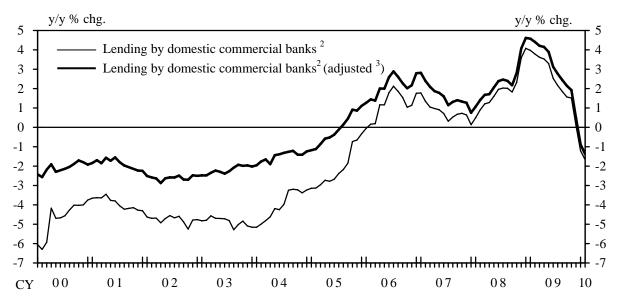

Note: 1. Data are at end of period.

Source: Bank of Japan.

Lending by Financial Institutions

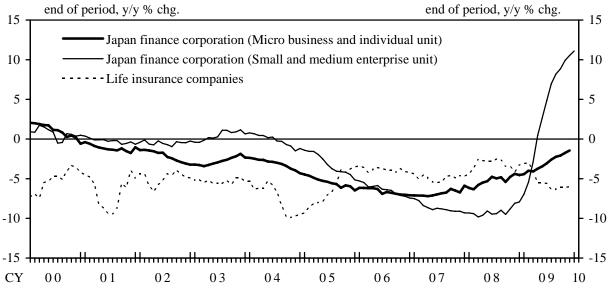

(1) Lending by Domestic Commercial Banks¹

Notes: 1. Percent changes in average amounts outstanding from a year earlier.

- 2. "Domestic commercial banks" refers to city banks, regional banks, and regional banks II.
- 3. Adjusted to exclude
 - (1) fluctuations due to the liquidation of loans,
 - (2) fluctuations in the yen value of foreign currency-denominated loans due to changes in exchange rates,
 - (3) fluctuations due to loan write-offs,
 - (4) the transfer of loans to the former Japan National Railways Settlement Corporation to the General Account, and
 - (5) the transfer of loans to the former Housing Loan Administration Corporation to the Resolution and Collection Corporation.

(2) Lending by Other Financial Institutions

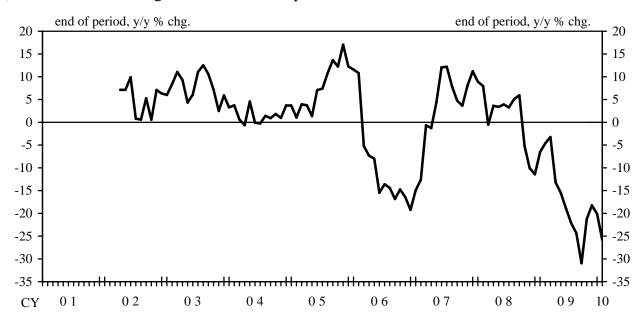

Note: The figures of the Japan Finance Corporation (Small and Medium Enterprise Unit) exclude the amounts outstanding of lending to the Credit Guarantee Corporations.

Sources: Bank of Japan; Japan Finance Corporation; The Life Insurance Association of Japan.

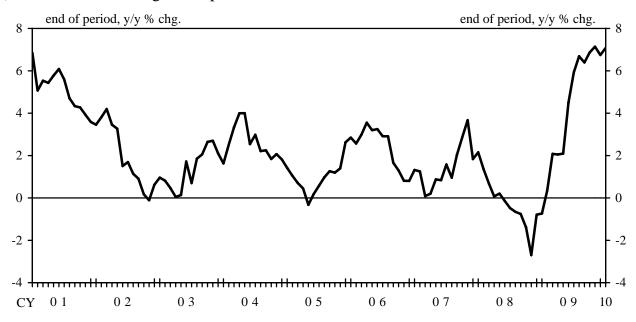

Private-Sector Fund-Raising in the Capital Markets

(1) Amount Outstanding of Commercial Paper

Note: Figures are those of short-term corporate bonds registered at the book-entry transfer system. Those issued by banks, securities companies and others such as foreign corporations are excluded; ABCPs are included. Figures up to March 2008 are those compiled by the Bank of Japan.

(2) Amount Outstanding of Corporate Bonds

Note: The figures of percentage changes from the previous year of the amount outstanding of corporate bonds are calculated given the following:

- (1) The sum of straight bonds issued in both domestic and overseas markets is used.
- (2) Bonds issued by banks are included.
- (3) Domestic bonds are those registered at the book-entry transfer system. The series is spliced at April 2008 with the one published by the Japan Securities Dealers Association.
