I. Introduction

The Bank of Japan, through public relations activities conducted at its Head Office and branches, has been seeking to determine the concerns of a broad cross-section of the general public relative to its policy and operations. An example of such action is the Bank's *Opinion Survey on the General Public's Mindset and Behavior*, conducted since 1993 with a nationwide sample of 4,000 individuals who are at least 20 years of age. This survey is essentially an opinion poll designed to gain insight into the public's perceptions and actions, and therefore differs in character from the Bank's *Tankan* (Short-Term Economic Survey of Enterprises in Japan), which is conducted separately from this survey.

II. Survey Outline

Survey period:	From June 3 to June 13, 2005.
Sample size:	4,000 people (2,010 people [i.e., 50.3 percent of the overall sample size] provided valid responses to questions).
Survey sample participants:	Individuals living in Japan who are at least 20 years of age.
Sampling method:	Stratified two-stage random sampling method.
Survey methodology:	Questionnaire survey. (Researchers visit sample individuals, ask them to complete the questionnaire within a prescribed period, and then collect the finished questionnaires upon subsequent visits.)

III. Questionnaire and Results

Bold numbers refer to the rate of responses for each menu of choices against total respondents for each question (percent; the second decimal place is rounded off^{1,2}).

¹ Because of rounding, response ratios do not necessarily add up to 100 percent even for questions that allow for only one choice.

² Figures in parentheses represent results of the previous survey (March 2005).
