FOR RELEASE 9:30 A.M.
Thursday, November 25, 2004

Revision of the Corporate Service Price Index (CSPI) to the 2000 base

I. Purpose and Basic Strategy of the Revision

The Bank of Japan has revised the Corporate Service Price Index (CSPI) from the 1995 base to the 2000 base.

In this revision, in addition to the update of the base year for weights and indexes from the 1995 base to the 2000 base, the selection of items and sample prices are reviewed. The revision was undertaken based on the understanding that services transacted among corporations and the price-setting behaviors of the corporations have been changing over the past five years since the last revision.

This revision is intended to incorporate the emergence of new services and the diversification of the existent services accompanied by the structural changes in Japan's economy and industry, the diversification of prices stemming from the changes in price setting behaviors among corporations. Moreover, it is intended to provide convenient use of statistics on services, and to reduce the reporting burdens of the correspondent companies. The basic points of the revisions are as follows.

(1) Revision of selected items

The progress of information technology and the development of deregulation have brought about drastic changes in the transaction conditions between corporations; this has resulted in the emergence of many new services and diversification of existent services. In this

revision, the selected items have been revised, especially in the fields that are significantly affected by those changes. Those revisions include the selection of new items, division of existent items, expansion of services included in the scope of the items, and abolishment and combination of the items. In addition to those changes, the total number of selected items has been increased for the convenience of the users.

Concerning the classification of the index, the general structure remains unchanged because the weights for index calculation are based on the year 2000 Input-Output table, which is based on the 1993 revision of Japanese Standard Industrial Classification.

(2) Review of sample prices (increase of sample prices, review of surveyed services, and incorporations of diversified prices)

In recent years, the price-setting behaviors of corporations have changed. Moreover, the diversification of prices of goods and services is growing ever wider. There are two main reasons that explain this phenomenon. First, corporations are differentiating the supply of their services from other suppliers, and are offering price discounts through individual negotiations with the specific customers, as the requirements from the demand sides becomes more diverse and the competition among suppliers becomes increasingly competitive. Second, the development of deregulation about prices, such as the loosening of restrictions on price-setting, has had a significant effect. To deal with these changes, a wide range of sample prices have been reviewed, not only for newly selected items but also for existent items.

A variety of discounted prices was also adopted, since it has become obvious that the price survey typically faces difficulties in obtaining actual prices, due to the increasing diversification of prices.

In addition to the arguments mentioned above, averaged prices have been adopted further, after very careful examination for ensuring constant quality, as the conventional price survey method—which states the surveyed services to be representative, fixed in

transaction condition and in trading partners, and continuous—has become difficult due to the increased diversification of services and their prices.

(3) Adoption of price survey methods that take the reporting burden into consideration (use of databases provided by private companies)

To reduce the reporting burden in surveying sample prices, price survey has been designed taking the customs of transactions and the availability of data held in the computer system of the correspondent companies into considerations. In addition, the data provided by private companies has begun to be adopted as sample prices in some items.

Due to punctual difficulties accompanied by current revision of the CSPI to the 2000 base, the publication procedure has been changed as follows. From the first monthly release date of the 2000 base CSPI, both preliminary and final figures will be released for each surveyed month. In principle, the preliminary figures will be released on the 18th working day of the following month (the date will be shifted a few working days earlier, when the number of working days in the month is small). At the same time, final figures will be released two months after the surveyed month of the index, based on revisions to the preliminary figures.

II. Detailed contents of the revision

1. Selected items

1.1 Number of items selected in the 2000 base index¹

The selection of the items has been revised, especially in the groups on which the effects of structural changes in the economy and industry have been substantial, to reflect the recent changes in the transactions of the service activities. Eight items were newly selected, seven items were divided out, three items were abolished, and four items decreased by

¹ For details, see Appendix 1.

combination. As a result, the total number of items in the 2000 base index is eight more than the 1995 base index.

2000 base	1995 base	Changes	Number of the changes in items			
			Newly selected	Abolished	Divided	Combined*
110	102	+8	+8	-3	+7	-4

(Note) “Combined” includes the net change in the number of items that were divided out after they were once combined, and items whose scopes were enlarged after they were combined.

1.2 Changes from the 1995 base index

The followings are the changes of selected items for each group. In addition to the changes listed below, the names of some of the items have been changed, in consideration of the correspondence of the name with that in the other economic statistics and the overall consistency in naming within the CSPI.

-- For the changes of selected items, see Appendix 2. For the overview of selected items, see Appendix 3.

(1) Group “Financial services”

<Newly selected items>

Securities brokerage services, Securities selling services, Financial agency services, Custody services, Credit guarantee and related services.

<Abolished item>

Trust business services

<Combined items>

Stock transfer agency services, Securities issuance and related services

→ Securities issuance, transfer and related services

<Combined items whose scope expanded>

Remittance services, Finance bills collection services

→ Domestic money transmission and receipt

Direct debit services, Electronic banking services→ Account services

(2) Group “Real estate rental”

<Divided items>

Office space rental

→ Office space rental (areas around Tokyo), Office space rental (areas around Nagoya),
Office space rental (areas around Osaka), Office space rental (other areas)

(3) Group “Passenger transportation”

<Divide items>

Railroad passenger transportation

→ *Shinkansen* bullet train,

Railroad passenger transportation (excluding *Shinkansen* bullet train)

Buses

→Route bus, Chartered bus

<Combined items>

Hired cars, Taxis

→Hired car and taxi

(4) Group “Overland freight transportation”

<Divided items once combined>

Less-than-truckload freight, Truckload freight

→ Less-than-truckload freight, Door-to-door parcel delivery, Drops off deliveries in
postboxes, Truckload freight, Freight by special truck

(5) Group “Marine freight transportation”

<Newly selected items>

Oceangoing ship chartering services

(6) Group “Communications services”

<Combined items>

Domestic fixed telephone services, International fixed telephone services, ISDN
(Integrated Services Digital Network)

→Fixed telephone services

Domestic leased circuits, International leased circuits

→Leased circuits

<Abolished item>

Pager services

(7) Group “Broadcasting services”

<Items whose scope expanded>

Cable broadcasting → Broadcasting services

(8) Group “Advertising services”

<Newly selected item>

Internet advertising

(9) Group “Information Services”

<Divided items>

Software development

→Custom software, Prepackaged software

Data processing

→Data processing services, System management and operation services

(10) Group “Leasing and rental”

<Abolished item>

Other rentals

(11) Group “Other services not included elsewhere”

<Newly selected item>

Ordinary laundry services

2. Revision of index classifications

2.1. Revision of index classifications in Basic grouping index

In the 1995 base index, “Advertising services” was composed of two subgroups; “Broadcasting advertising services” that consisted of items “Television commercials” and “Radio commercials”, and “Other advertising services” that included the rest. In the 2000 base index, it is now composed of the following two newly established subgroups: 1) “Advertising services by four representative media” which consists of items “Newspaper advertising”, “Magazine advertising”, “Television commercials”, and “Radio commercials”, and 2) “Other advertising services” which consists of the rest of the items in “Advertising services”.

With regard to the other groupings (subgroups, groups, and major groups), the classifications remain almost the same. However, the names of some of the groupings have been changed, in consideration of the correspondence of the name with that in the other economic statistics and the overall consistency in naming within the CSPI classification.

2.2. Review of Reference index

Among Reference indexes for the 1995 CSPI, “Items included in indexes for Basic grouping” were abolished, while “Items not included in indexes for Basic grouping” consisting of “Export freight transportation (yen basis)” and “Export freight transportation (contract currency basis)” will continue to be released as a Reference index for the 2000 base CSPI².

² For Basic grouping indexes, the contract currency basis indexes are published as Reference indexes. For Reference indexes of “items not included in indexes for Basic grouping”, the name has been revised to “Export corporate service price index”.

<Abolished items>

Major group “Finance and insurance”

Banking services (commission rates)

-Trust business services

Securities services (commission rates)

-Underwriting services

Property and casualty insurance services (commission rates)

-Property and casualty insurance, Voluntary motor vehicle insurance,

Compulsory motor vehicle insurance, Fire insurance,

Marine and other transportation insurance services

Major group “Real estate services”

Office space rental (by area)

-Tokyo area, Nagoya area, Osaka area

Major group “Miscellaneous services”

Industrial waste disposal (by type)

-Construction waste disposal, Sludge disposal, Liquid waste disposal, Other waste disposal

In addition, the indexes of “Domestic supply-demand factors” were abolished, taking the classification changes in this revision and the changes of the environment of public regulations into the consideration.

3. Update of base year for both index and weight calculation³

The base year for the index calculation and the year for the weight calculation have both been updated from 1995 to 2000.

3.1. Statistics used for the CSPI weight calculation

The weights of the index are based on the transaction values of corresponding adopted

³ For details, see Appendix 3 and 4.

services during the base year 2000 within the total intermediate sectors of the *Input-Output Tables (I-O Tables) in 2000*, published by the Ministry of Public Management, Home Affairs, Posts and Telecommunications.

3.2. Outcome of weight calculation

Among the major groups, the newly calculated weights have increased for “Information services” and “Communications and broadcasting services” and decreased for “Transportation” and “Real estate services”.

(Increase):

Information services (+37.1 points), Communications and broadcasting services (+27.1 points), Advertising services (+10.1 points)

(Decrease):

Transportation (-37.0 points), Real estate services (-23.3 points),

Finance and insurance (-22.9 points)

Total transaction values for the index increased by 13.2 percent on year-on-year basis (14,591.1 billion yen: 110,807.7 billion yen →125,398.8 billion yen)

The total coverage of the transaction increased by 6.0 percent (57.6 percent →63.6 percent).

Major group	Weights (one-thousandths)		
	2000 base (1)	1995 base (2)	Change (1)-(2)
All items	1,000.0	1,000.0	—
Finance and insurance	50.4	73.3	-22.9
Real estate services	72.8	96.1	-23.3
Transportation	193.3	230.3	-37.0
Communications and broadcasting services	96.3	69.2	+27.1
Advertising services	74.9	64.8	+10.1
Information services	106.1	69.0	+37.1
Leasing and rental	93.0	90.4	+2.6
Other services	313.2	306.9	+6.3

Major group	Transaction values for the index (billion yen)			
	2000 base (1)	1995 base (2)	Change (1)-(2)	Change (%) (1)/(2)
All items	125,398.8	110,807.7	+14,591.1	+13.2
Finance and insurance	6,315.9	8,124.5	-1,808.6	-22.3
Real estate services	9,127.8	10,641.9	-1,514.1	-14.2
Transportation	24,241.4	25,520.4	-1,279.0	-5.0
Communications and broadcasting services	12,080.1	7,668.0	+4,412.1	+57.5
Advertising services	9,399.2	7,182.3	+2,216.9	+30.9
Information services	13,304.3	7,647.2	+5,657.1	+74.0
Leasing and rental	11,659.0	10,018.1	+1,640.9	+16.4
Other services	39,271.1	34,005.3	+5,265.8	+15.5

(billion yen)

	Total calculable transaction values of services (A)	Transaction values for the index (B)	Coverage (B/A)
2000 base	197,252.3	125,398.8	63.6%
1995 base	192,501.1	110,807.7	57.6%

4. Review of sample prices

4.1. Increase in the number of sample prices, review of scopes of items

In the general process of collecting sample prices in the CSPI, sample prices are required to be the actual and continuous prices under constant conditions, between constant trading partners, of the services that are qualified to be the representative in the item. However, due to the recent emergence of the new services and the diversification of the existent services, accompanied by the structural changes in the economy and industry, it is essential to review the surveyed services to ensure the statistical accuracy of the index. Therefore, sample services are reviewed not only for the newly selected items shown in II, 1.2., but also for the existent items, in this revision.

Specifically, new sample services were added, mainly to major group “Information services” and group “Communications services”, and “Financial services”. Number of sample prices are increased as required from the viewpoints of ensuring statistical accuracy⁴.

-- See Appendix 5 for the newly selected sample services, Appendix 6 for the number of selected sample prices, and Appendix 7 for the number sample prices by type of prices.

The number of sample prices (as of October 29, 2004) in the Basic grouping of the 2000 base CSPI totals 3,050, and about 28 sample prices on average for each item (in the Corporate Goods Price Index <CGPI>, on the other hand, about six on average per item)⁵.

⁴ Compared to goods, services have prominent regional characteristics and heterogeneities. Therefore the price levels and their developments tend to vary. Thus, to ensure the accuracy of the index, relatively larger number of sample prices is surveyed for each item in the CSPI compared to the number of those in the CGPI.

⁵ In addition to those, 36 more sample prices have been surveyed for the Reference index (Export corporate service price index).

Number of items (A)	Number of sample prices (B)	B/A	Number of reporters ⁶
110	3,050	27.7	596

4.2. Further adoption of discount prices

Under the recent diversification of prices, it has become more difficult to grasp actual price movements. Considering this problem, discounted prices have been adopted, as explained below.

(1) In group “Passenger transportation”, “Zone PEX fares”⁷ for item “International air passenger transportation”, and ticket booklet fares for item “Domestic air passenger transportation” have been adopted. In addition, for items “*Shinkansen* bullet train” and “Railroad passenger transportation (excluding *Shinkansen* bullet train)”, ticket booklet fares and round-trip fares have been adopted. For item “Hired car and taxi”, long-distance discounted fares and extra charges have been adopted.

(2) In items that belong to groups “Financial services” and “Overland freight transportation”, and major group “Advertising services”, some sample prices have been changed to actual prices from the “list prices” that were previously adopted. Those changes were motivated by the understanding that price discounts, depending heavily on the kind of customers or transaction conditions, have been widely observed, and that the list prices have lost their representativeness.

4.3. Increase of averaged prices with constant quality conditions ensured

In principle, the CSPI continually surveys actual prices of the services that are regarded as being representative and unchanged in terms of transaction condition and trade partners.

⁶ Different units in the same company are counted as different reporters.

⁷ “Zone PEX (Purchase Excursion) fares” are formal discount airfares determined by each airline company. The fares are cheaper than fares for normal tickets, but there are restrictions on validity and changes in reservations. Also, the tickets are nonrefundable or only partly refundable.

When this conventional survey is difficult, however, under the effect of diversification of prices or services, the adoption of the averaged price (Total transaction values per month/ Total transaction quantities per month) within the bounds of ensuring constant quality is one choice. In fact, the number of adopted averaged prices has been increased in this revision, after the careful examination for each price.

The introduction of averaged prices requires careful examination for each focused sample price, because the requirements of fixed conditions—such as constant transaction conditions or constant trading partners—are loosely maintained in the case of averaged prices. Therefore, in the 2000 base CSPI, averaged prices were adopted only when considered appropriate⁸. Some examples are shown below.

(1) Services that are specific and different for each transaction

Some services are very specific and different even though they are categorized in the same item. In the conventional price survey method that specifies the contents of the transaction in detail, the completion of the survey of the item is almost impossible because extremely large numbers of sample prices are required for ensuring its representativeness. Item “Custom software” in major group “Information services” is an example.

In item “Custom software” (named “Software development” in the 1995 base index), “monthly rates per person engaged in software development” have been adopted as sample prices. It used to be considered appropriate to take sample prices of large-scale software projects with the same clients over a long period of time, in which the price of the overall development service is calculated from an estimated quantity of work (person per month) for each process and the unit cost of the person needed for each process (monthly rate per person) of the development⁹. In recent years, however, the collection of sample prices has

⁸ For example, the averaged prices that were introduced in sample prices of item “Motor vehicle repair and maintenance,” in the 1995 revision, has been excluded in this revision after close examination.

⁹ The usage of the “averaged monthly rate per person” is adopted because it is difficult to survey the overall price of software development directly. This surveyed price does not capture price changes stemming from changes in productivity. There is, however, no better way at present.

become more difficult, since continuous trading relationships are decreasing. The reasons for the difficulty are as follows: the increase of small-scale software development, the diversification of customers, including small companies, and the shortening of software development schedules. In these cases, since neither the estimated quantity of work nor the monthly rate per person is calculated beforehand, jobs in which a monthly rate per person is calculated are increasingly rare.

To overcome these difficulties, “averaged monthly rate per person” has been introduced in the 2000 base CSPI. As mentioned above, the figure is obtainable from a unit amount of sales divided by the number of months and persons required for the development.¹⁰

(2) Diversification of prices by discount through individual negotiations or similar business activities

In the conventional treatment that specifies the contents of the transaction in details, the price survey for the corresponding item is difficult if the prices are often discounted depending on trading partners and are diverse from one another. That is because extremely large numbers of samples are required for obtaining its representativeness. Corresponding items are as follows.

Items “Domestic money transmission and receipt”, “Securities issuance, transfer, and related services”, “Underwriting services”

Item “Office space rental (areas around Tokyo)”¹¹ and other items in major group “Real

¹⁰ In calculating the “averaged monthly rate per person” properly, the figure has to be calculated for each group of services that is similar in quality and composition of the labor engaged in the service. More specifically, the services are first classified into smaller groups by the similarities of the project property, such as type of prepackaged software used for the software development, the business field in which the developed software is going to be used, the trading partners. The “averaged monthly rate per person” is then calculated for each group. The price fluctuation caused by the incorporation of a variety of services is thus controlled as much as possible.

¹¹ We have been surveying both “actual contract rate” and “averaged rental rate” as sample prices in major group “Real estate services” from the very beginning of the CSPI survey. “Actual contract rate” is the actual rental rate of the specified rental space that is applied to tenants in the surveyed building. “Averaged rental rate”, on the other hand, is obtained from the total rental revenue from the all tenants

estate services”

Item “Chartered bus”

Items “Newspaper advertising”¹², “Magazine advertising”, “Television commercials”

Item “Temporary employment agency services”¹³

(3) Absence of representative trading partners (such as the cases of transactions at the spot markets)

When the transaction volume with continuous trading partners is not significant to the total volume of the transacted services, the sample prices in the conventional survey method that specifies the trading partners are difficult to be representative. Item “Custom software” in major group “Information Services” and items in subgroup “Leasing”,—where only newly contracted prices are adopted as sample prices—are such examples.

4.4. Other Revisions

The points discussed so far were especially focused in this revision, from the 1995 base to the 2000 base CSPI. In addition to those points, the representativeness of the existent sample prices and the adequacy of the survey method are reexamined. As for sample prices that are calculated from the sample rates multiplied by the inflators (the indexes that

of the specified rental space divided by the working floor space of the building on the date of the survey. The advantage of adopting the averaged rental rate as sample price is that it includes newly contracted prices that reflect the supply-demand condition swiftly, and that it covers several rental contracts by one sample price. On the other hand, it also has disadvantages, because all rental spaces in the surveyed building are assumed to be similar in quality, and price variations caused by transaction condition or trading partners are easily incorporated into the price survey of “averaged rental rate”. In the 2000 base CSPI, sample prices that reflect the actual price movement more accurately are adopted after careful examination for each price.

¹² In item “Newspaper advertising”, averaged prices (unit price per advertising space) have been adopted, with the advertising space in newspapers and trading partners (or trading industries) fixed.

¹³ In item “Temporary employment agency services”, averaged monthly rates per person have been incorporated for some of the sample prices in the 1995 base CSPI. In the 2000 base CSPI, transaction conditions such as type of occupation (operation of office equipment, filing, etc.), region, and contract form are specified in more detail in the process of calculating averaged prices.

represent the price developments of the object, and are used for providing the sample prices), selected inflators are reviewed as they are reviewed in each revision on regular basis¹⁴.

5. Adoption of survey methods that consider reporting burden

To reduce the reporting burden in the price survey, price survey methods are designed so that the actual transactions and the environment of computer systems of the reporters are taken into consideration. In addition, usage of the database provided by private companies as sample prices has been started for some items.

For the newly selected item “Oceangoing ship chartering services” in group “Marine freight transportation”, some sample prices are constructed from the database provided by the private company. For item “Television commercials” in group “Advertising services”, the data of broadcasting time is used for quality adjustments.

¹⁴ As for the sample prices in the 1995 base CSPI that use indexes of CGPI as inflators, selected inflators were changed from the 1995 base WPI to the 2000 base CGPI from December 2002 index, corresponding to the revision of the WPI (switchover to the 2000 base CGPI). On the other hand, in the 2000 base CSPI, indexes in the 2000 base CGPI have been adopted as an inflator from January 2000, the start date of the statistics. Further, for sample prices that adopt inflators other than CGPI, the inflators were revised after close examination (see item “ Marine and other transportation insurance services”, among others).

III. Changes in publication procedure

Due to the increase in the number of total sample prices and averaged prices, sample prices in some groups are expected to arrive later than the publication date for the previous 1995 Basic grouping index. Accordingly, from the date of the publication of November 2004 index in December 2004, the publication procedures will be revised as follows.

(1) The indexes are in principle published on the 18th working day of the next month of the surveyed month of the index (the release date will be shifted a few working days earlier, when the number of working days in the month is small), as they are in the previous 1995 base index.

(2) Preliminary figures are released on the 18th working day of the following month. Final figures will be released two months after the surveyed month of the index, based on revisions to the preliminary figures, while the preliminary figure of the following month is published at the same time.

--On the publication date on the 18th working day of the next month, both Basic grouping index and Reference index are published as preliminary figures and those are published as final figures two months later.

IV. Developments of the 2000 base CSPI

1. Overview

The All items of the 2000 base CSPI shows a declining trend starting in January 2000. On a year-on-year basis, the rate of decline is the biggest in January 2002, but shrinks thereafter¹⁵.

¹⁵ See the Linked Indexes for longer periods. Those indexes are available for all “groups”, “major groups”, and for “All items” from January 1985. Use caution in using the Linked Indexes, especially when the month-on-month change from December 1999 to January 2000 and the year-on-year change of the months in 2000 are to be analyzed, because there might be a level shift change between the figures

Breaking down the year-on-year change of All items by major group, the significant decrease of the “Communications and broadcasting services” and “Leasing and rental” observed in 2001 are mitigated in 2002 and thereafter, while “Transportation” increases after the end of 2002 and shows even greater increase since the latter half of 2003. For “Other services”, a steady decline is continuously observed (see Chart1).

For “Communications and broadcasting services” and “Leasing and rental”, the competition accompanying price reduction in the communications service industry under the deregulation process and the decline of the leasing rates of communications equipment such as computers in 2000 and 2001, followed by the end of the price competition and mitigation of price decrease of communications equipment, are reflected. For “Transportation”, the drastic price increase of marine freight transportation from the latter half of 2003—which was affected by a worldwide increase in movement of goods—contributed significantly. For “Other services”, building maintenance services and civil engineering and architectural services underwent sharp decreases under the corporate cost reduction requirements.

On a year-on-year basis, the new index is moving at the similar or slightly less- decreasing rate compared to the old index after the middle of 2003, while the new one decreased at greater rate than the old one before then (see Box for the results of the revisions of the focused groups).

2. Cause of the Discrepancy

2.1. Discrepancy caused by the revisions of the base year for weight and indexes

First, it is important to note that usage of Laspeyres formula—in which weights are fixed on the base year—is one factor of the discrepancy, because there are two problems in the Laspeyres index where the base year is fixed. One problem is that the weights tend to differ from the actual transaction values as time elapses. The other is that the effect of each item

of December 1999 and January 2000. This level shift is obtained because the Linked Indexes are calculated by connecting the 1995 base index and the 2000 base index with the ratio of averaged monthly series of the year 2000 in the 1995 base index and that of the 2000 base index respectively.

becomes less (more) significant as the index level decreases (increases) far from the base-year level.

Concerning the effect of fixing the base year, the Paasche-Check shows that the discrepancy between the All items index of the Paasche index and that of Laspeyres has become to -3.0 percent¹⁶ (In the revision from the 1990 base to the 1995 base, the discrepancy was -1.3 percent; see Chart 2). This result indicates that the effect of the weight change from the base year as well as the increase of the variance in the level of respective items in the 1995 base index. In fact, some items in “Communications services” and some IT-related items in “Leasing and rental” show drastic decreases¹⁷.

2.2. Effects of the revision of surveyed items and services

The discrepancy is also caused by the revision of surveyed items, services, and the survey methods (see Chart3).

First of all, the effect of newly selected items and the items in which the surveyed services are expanded, such as those that belong to groups “Information services”, “Communications Services”, and “Financial Services”, contributes the decrease of the discrepancy from 2001 to 2002 (see Chart4). In particular, the new indexes of subgroups “Software development” and “Fixed telecommunications services” undergo remarkable decreases in year-on-year changes until 2002, compared to the old indexes, as a result of

¹⁶ The Paasche-Check is defined as the difference between the Laspeyres index and the Paasche index divided by the Laspeyres index and used to evaluate the discrepancy of the two indexes. The bigger the discrepancy, the greater the effect of the weight changes during the focused period (from 1995 to 2000 in this case). The Paasche-Check is widely used to ensure the reliability of the Laspeyres index but the discrepancy is observed when no weight change occurs. The Paasche index is calculated from the harmonic mean, while the Laspeyres index is calculated from the arithmetic mean of the price index of items and this difference of the calculation method results in the observed discrepancy. The discrepancy becomes larger as the variance of the index levels increases.

¹⁷ In particular, the decreases in the index levels and increases in the weights of item “Cellular phone services” in major group “Communications and broadcasting services” and item “Computer rental” in major group “Leasing and rental”, and the decrease in the index level of item “Leasing of computer and related equipment” in major group “Leasing and rental” play dominant roles in the discrepancy between the Laspeyres index and the Paasche index.

this type of revision. In fact, for items in those subgroups, prices of newly selected items¹⁸ or surveyed services¹⁹ decreased. Moreover, the introduction of the averaged monthly rates per person (in item “Custom software”) and discounted prices (item “Fixed telephone services”) have significant impacts on the discrepancy.

Regarding the newly selected items that show notable development (see Chart 5), item “Internet advertising”²⁰ shows a downtrend as the supply increases and the cost benefit requirement becomes more severe, after the increase in the its prevailing period. Item “Securities brokerage services” also shows continuous decline under increased competition after the deregulation of stock brokerage. On the other hand, item “Oceangoing ship chartering services” shows a drastic rise recently, reflecting the increase of the goods movement at the sea, and contributes to the increase of the new index.

2.3. Effects of the revision of existent sample prices

The revision of existent sample prices lowered the new index through wide range of items such as those of group “Advertising services”, and subgroups “Civil engineering and architectural services” and “Rental” (see Chart 6).

For group “Advertising services”, the revision of the sample price was made from the list prices to the price that reflects the actual price developments more accurately. The introduction of averaged prices and discounted prices that rely on the trading partners and transaction condition into items such as “Newspaper advertising” and “Television

¹⁸ Items “Custom software” and “Prepackaged software” are newly selected items that are made by the division of item “Software development” in the 1995 base index.

¹⁹ Surveyed sample prices are newly added to some of the items. “Packaged solution” to item “Custom software”, “Prepackaged software for business use” to item “Prepackaged software”, and “Internet Protocol Telephone service” to item “Fixed telephone services”. And for item “Custom software”, averaged monthly rate per person is newly employed, since the price survey based on the monthly rate per person becomes difficult, reflecting the decrease in the development size and shortening of the development schedule.

²⁰ Sample prices in the item are mainly list prices. That is because the representative transaction is carried out based on the list prices.

commercials” are such examples. For items “Surface surveying” and “Computer rental”, the new index has become to reflect the actual prices more accurately and thus caused the discrepancy between the new and the old indexes, after reexamination of price survey methods and the representativeness.

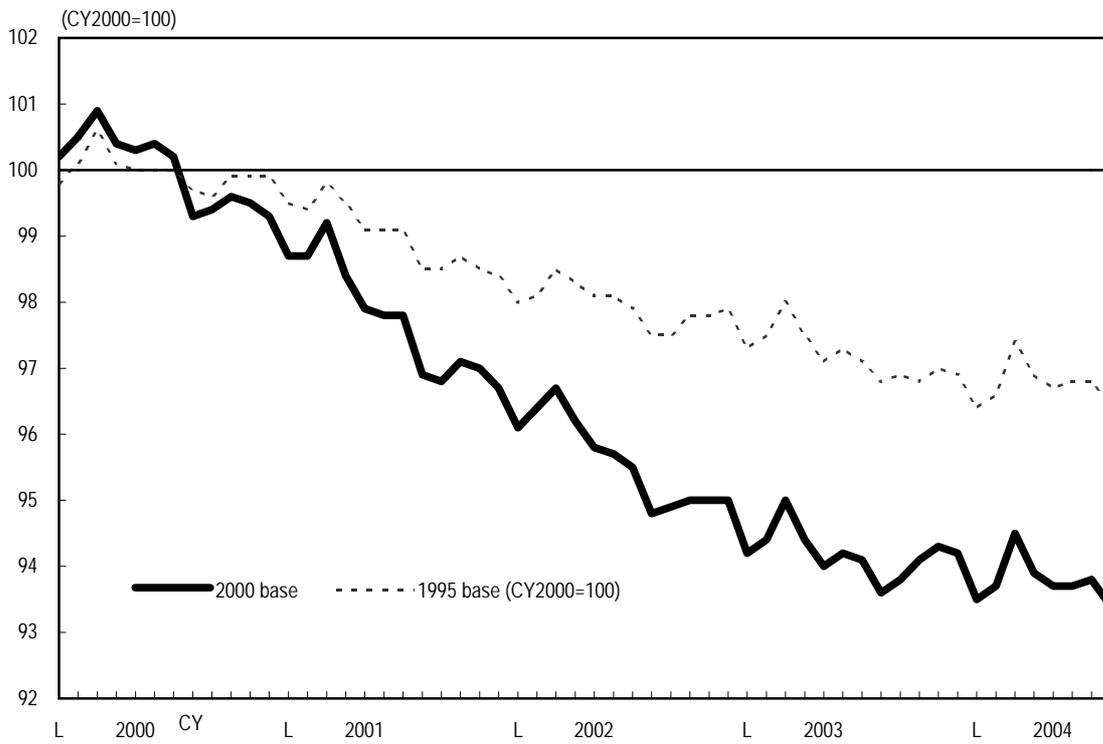

For some items that belong to subgroup “Leasing”, such as item “Leasing of computer and related equipment”, the clear discrepancy from the old index is observed as the result of the change of the inflator. In the 2000 base CSPI, the 2000 base CGPI is used for the inflator, while in the 1995 base CSPI, the 1995 base WPI is used from January 2000 to November 2002 as the inflator. As for the items selected as inflator in the CSPI, which mainly include communications equipment and informational technology-related items, indexes decrease faster in the CGPI than in the WPI. As a consequence, this change of inflator brings down the year-on- year change of new indexes compared to the old one for the observed period (see Chart 7).

Finally, the adoption of the averaged prices causes the index of All items to decrease, in year-on-year basis, in every years, about -0.2% at maximum(see Chart 8).

Breakdown of the discrepancy between the new and old indexes

Calculation method of the breakdown by revisions

The discrepancy of All items between the 1995 base index and the 2000 base index is calculated from the year-on-year change of the yearly averages of corresponding item of two indexes and its 2000 base weight (For the items where corresponding indexes are not available, subgroup indexes or estimated indexes are used). Items are then classified into the groups by the types of revisions described below.

1. Revision of items and surveyed services

Newly selected items, items/groups in which new sample prices were added.

(Item) Domestic money transmission and receipt, Securities brokerage services, Underwriting services, Securities selling services, Securities issuance, transfer and related services, Financial agency services, Custody services, Credit guarantee and related services, Route bus, Chartered bus, Drops off deliveries in postboxes, Freight by special truck, Ocean tanker, Oceangoing ship chartering services, PHS (Personal Handyphone System) services, Broadcasting services, Internet advertising, Custom software, Prepackaged software, Ordinary laundry services, Linen supply

(Subgroup) Fixed telecommunications services

2. Revisions of existent sample prices

Items in which sample prices have been revised, as the surveyed methods or representativeness of the sample prices were reviewed.

(Item) International money transmission and receipt, Account services, Compulsory motor vehicle insurance, Hired car and taxi, International passenger transportation, Domestic air passenger transportation, Railroad freight, Less-than-truckload freight, Door-to-door parcel delivery, Ocean tramper, Ordinary warehousing and storage, Other postal services, Newspaper advertising, Magazine advertising, Television commercials, Leaflets, Rental of machinery for civil engineering and construction, Computer rental, Industrial waste disposal, Patent attorney services, Architectural design and contract administration services, Surface surveying, Subsurface surveying, Certified real estate assessor services for registration, Temporary employment agency services

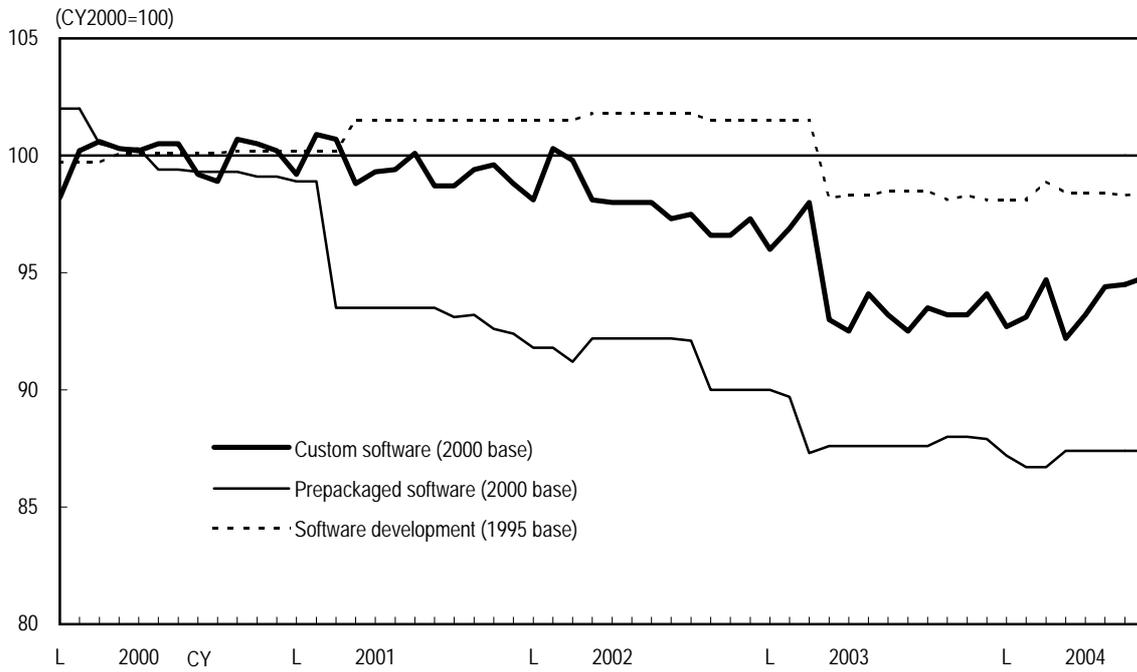

(Subgroup) Railroad passenger transportation

Items in which inflators were changed.

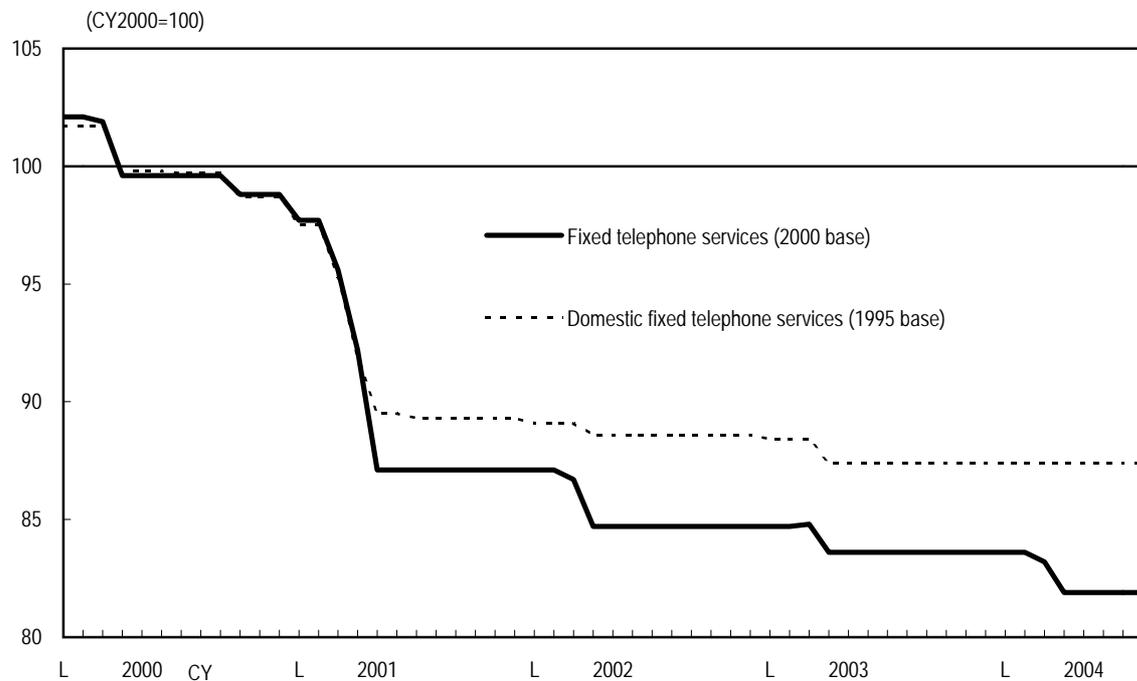

(Item) Fire insurance, Marine and other transportation insurance services, Industrial machinery leasing, Leasing of machinery and equipment for metalworking, Medical equipment leasing, Leasing of machinery and equipment for commercial and other services, Communications equipment leasing, Leasing of machinery for civil engineering and construction, Leasing of computer and related equipment, Office equipment leasing

Items in which surveyed services were expanded

(1) Item "Custom software", "Prepackaged software"

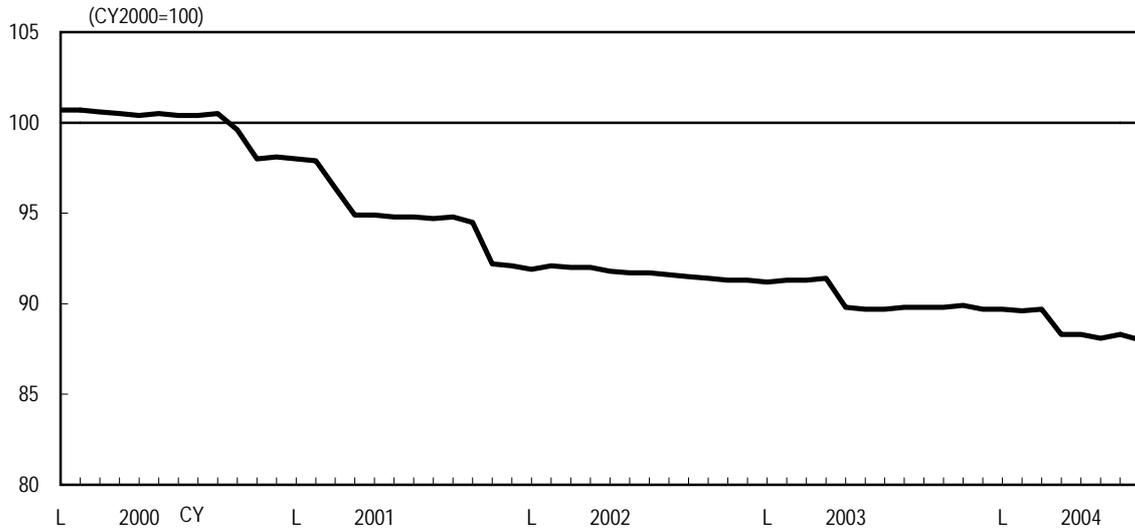

(2) Item "Fixed telephone services"

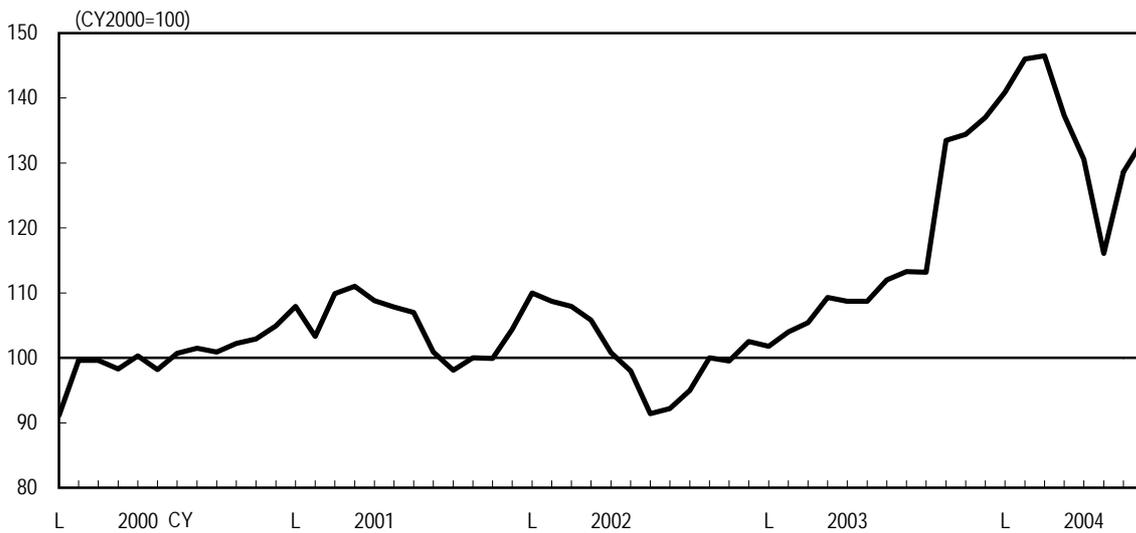

Newly selected items

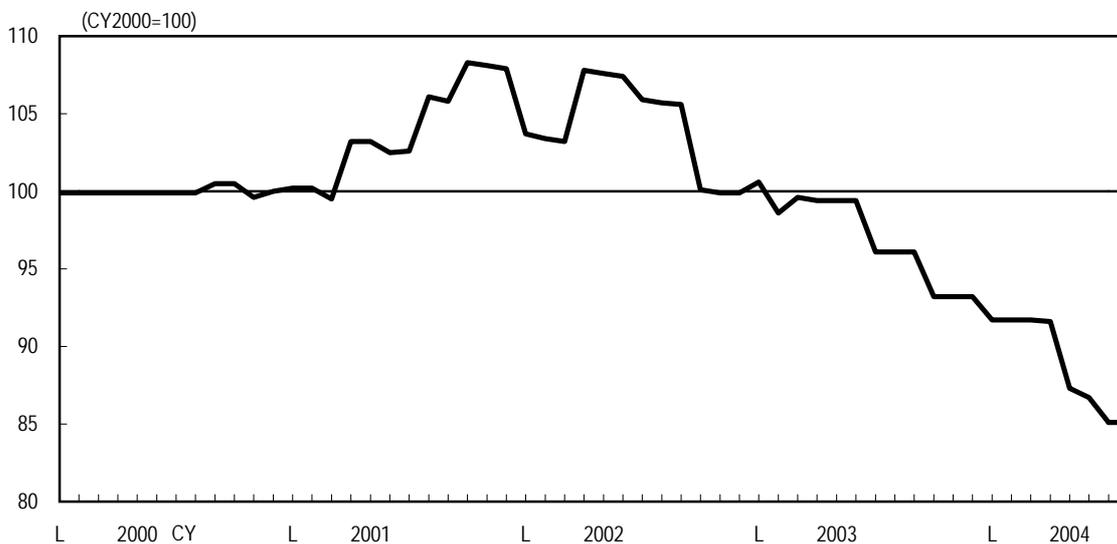

(1) Item "Securities brokerage services"

(2) Item "Oceangoing ship chartering services"

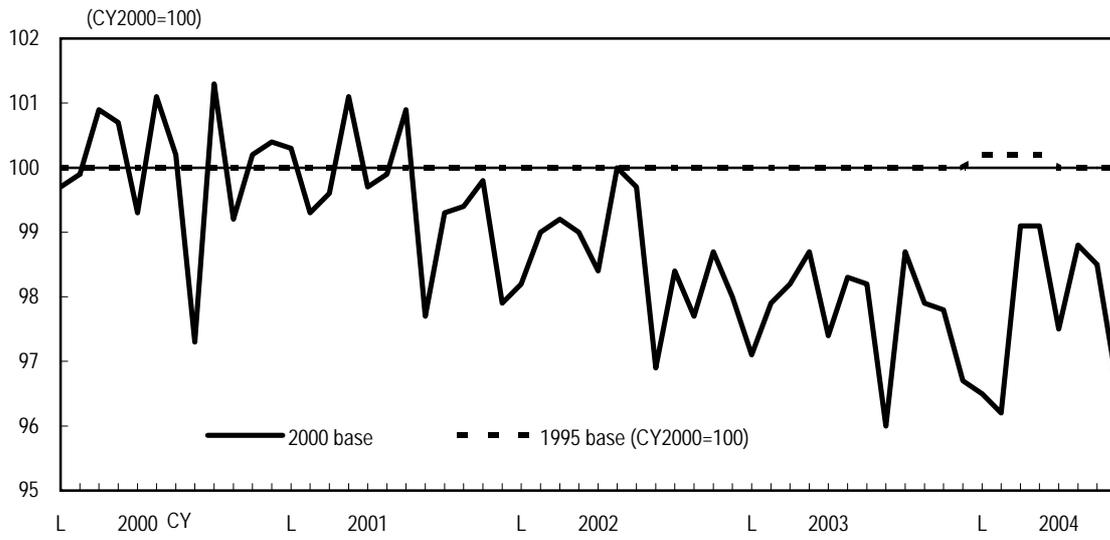

(3) Item "Internet advertising"

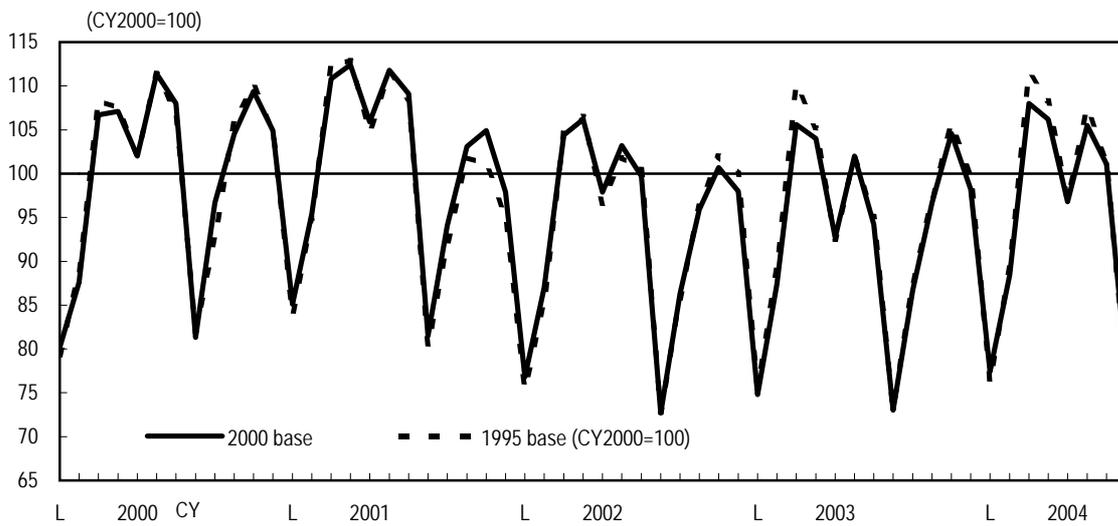

Items in which sample prices were revised

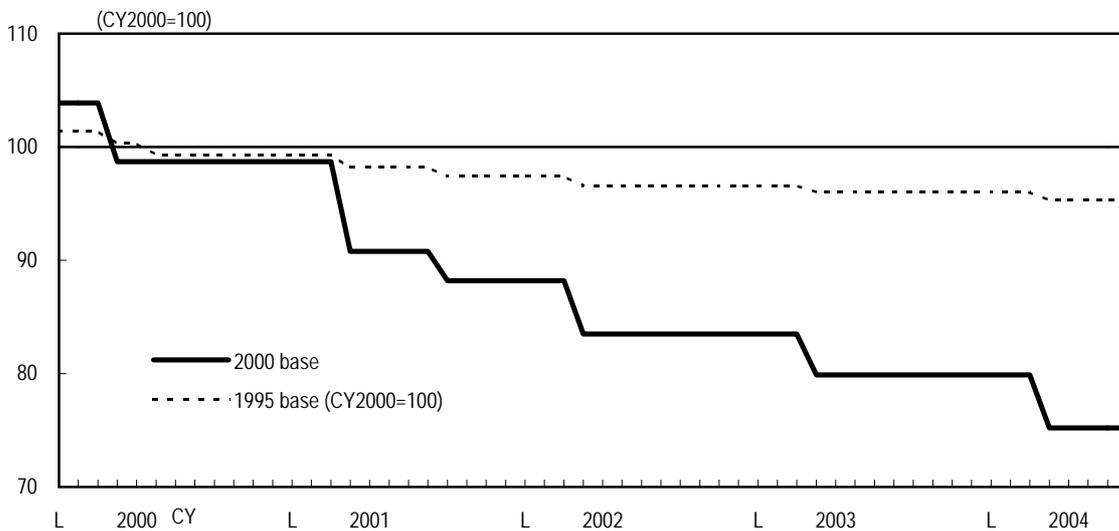

(1) Item "Newspaper advertising"

(2) Item "Television commercials"

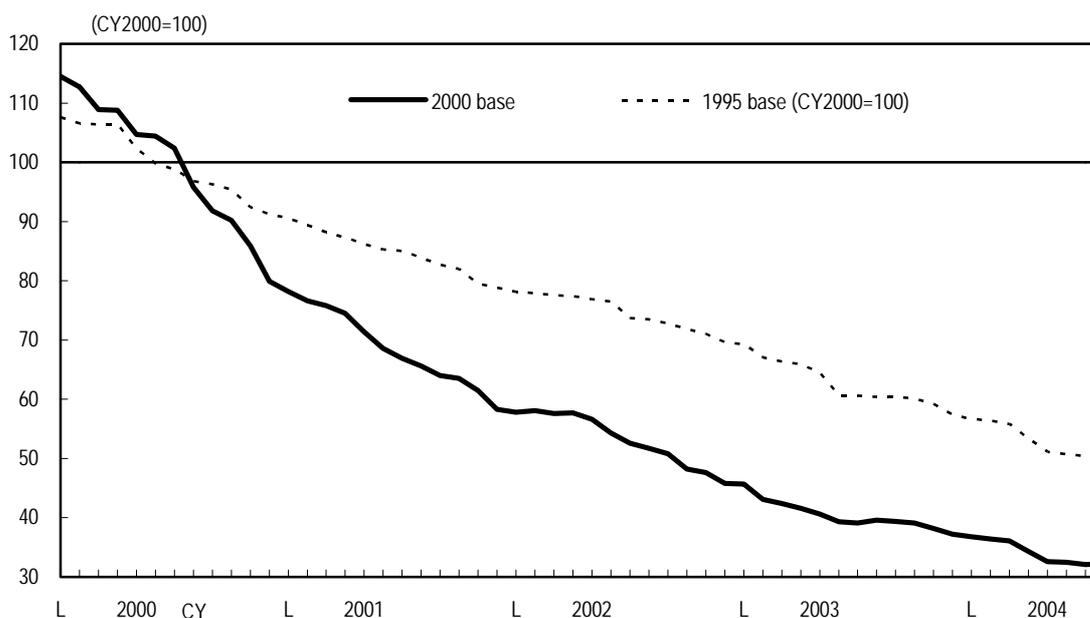

(3) Item "Surface surveying"

Items in which inflators were changed

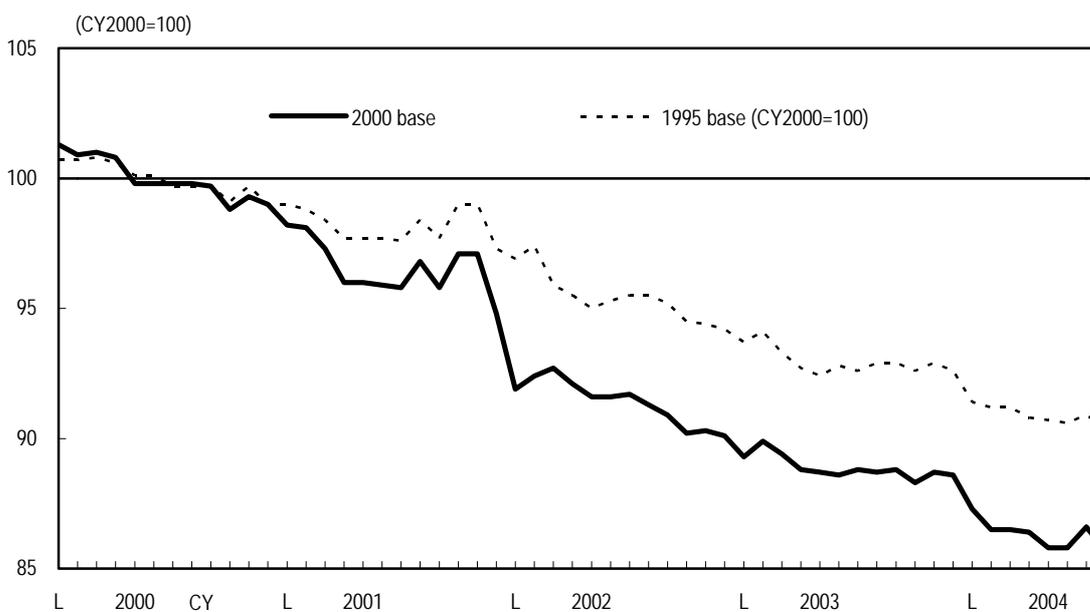

(1) Item "Leasing of computer and related equipment"

1995 base : To November 2002, commodity class "Computers and related equipment" and sample prices "Personal computers" in commodity "Computers" in 1995 base WPI are used as inflators. From December 2002 onward, commodity class "Electronic computers and computer equipment," commodity "General purpose computers and servers," and "Personal computers" are used as inflators.

2000 base: For the entire surveyed period, commodity class "Electronic computers and computer equipment," commodity "General purpose computers and servers," and "Personal computers" are used as inflators.

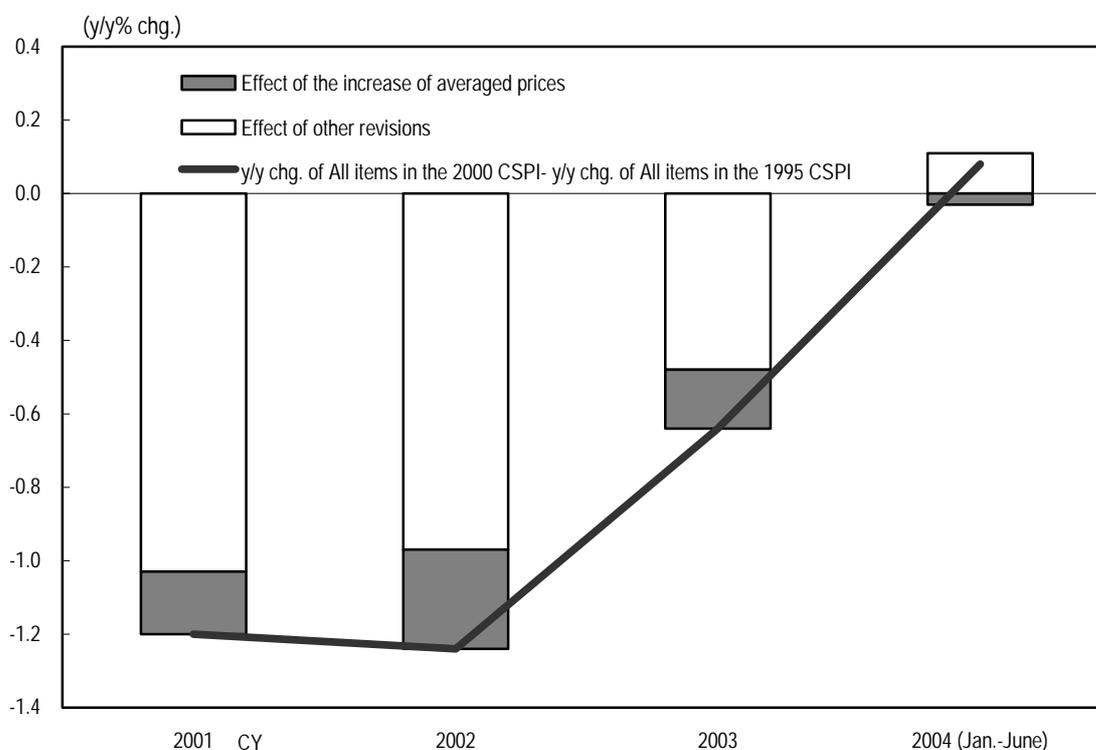

(2) Item "Leasing of machinery and equipment for commercial and other services"

1995 base : To November 2002, commodity "Automobile maintenance and service equipment" in 1995 base WPI are used. From December 2002 onward, commodity "Automobile maintenance and service equipment" in 2000 base CGPI is used as an inflator.

2000 base : Commodity "Automobile maintenance and service equipment" in 2000 base CGPI is used as inflator in all the surveyed period.

Effect of the increase of averaged prices

Calculation method of the breakdown by revisions

The discrepancy of All items between the 1995 base index and 2000 base index is calculated from the year-on-year change of the yearly averages of the corresponding item of two Indexes and its 2000 base weight (For items where corresponding indexes are not available, subgroup indexes or aggregated indexes of comparable items are used). Following items are those where averaged prices were additionally adopted.

(Subgroup, item)

Underwriting services, Securities issuance, transfer and related services, Marine and other transportation insurance services, Office space rental, Chartered bus, Domestic air passenger transportation, Newspaper advertising, Magazine advertising, Television commercials, Software development, Leasing of machinery for civil engineering and construction, Transportation equipment leasing, Rental of machinery for civil engineering and construction, Motor vehicle rental, Temporary employment agency services

(BOX)

Revised points in focused groups

For group “Financial services”, the classification and items were revised to reflect the varied financial services of corporations. The new index recently shows increase through the rise of “Credit guarantee and related services”, after a period of decline under the deregulation of stock brokerage services (October 1999), which contributed toward a continuous decrease of the index of item “Securities brokerage services.”

For group “Real estate rental”, item “Office space rental” in the 1995 base index was divided by region. This is because regional characteristics in rental rates and price settings are clearly observed, and user needs for regional indexes are reported. A clear difference is not observed between the new index and the old index.

For group “Passenger transportation”, two revisions were made. First, some items were divided to incorporate the price diversification of the services. Second, items “Hired cars” and “Taxies” in the 1995 base index were integrated to a single item, “Hired car and Taxi” in the 2000 base index. This is because the transaction volume of the hired cars has become small and declining. The new index decreases greater than the old index, and shows more obvious seasonal variation. The introduction of discounted prices, including discounted airfares for specified flights, and the newly selected surveyed service, such as chartered buses, play the dominant roles in this difference. It is worth noting that those prices are affected by the post-deregulation price competition.

For group “Overland freight transportation”, some items were divided in order to reflect the diversification of services such as the emergence of drops off deliveries. The classification of items was also reorganized in order to improve the user convenience. The new index shows a relatively sharper decline because of the revision of the sample prices from the standard list prices to the actual prices. The new prices reflect actual price developments after the deregulation more accurately.

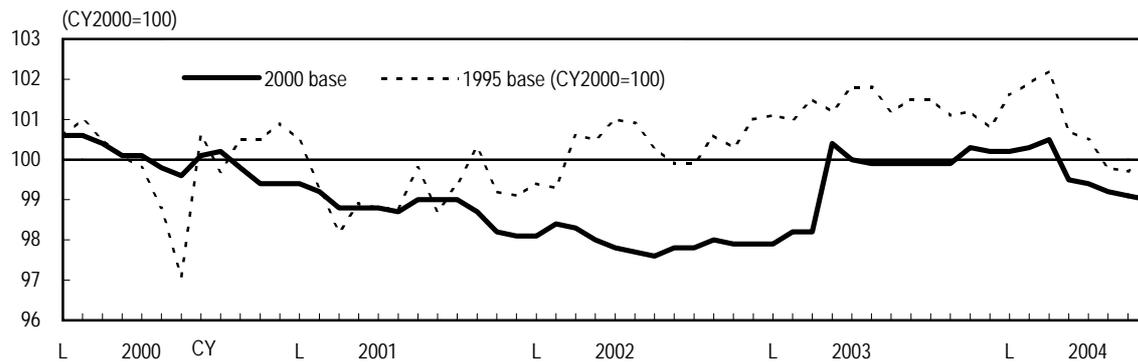

For group “Communications services”, some items were combined, incorporating some new services such as online access services from mobile phones and telephone services using the internet protocol network. Moreover, discounted prices were adopted to cope with the unification of the services. As a result of the revision, the new index

shows a further decrease compared to the old index.

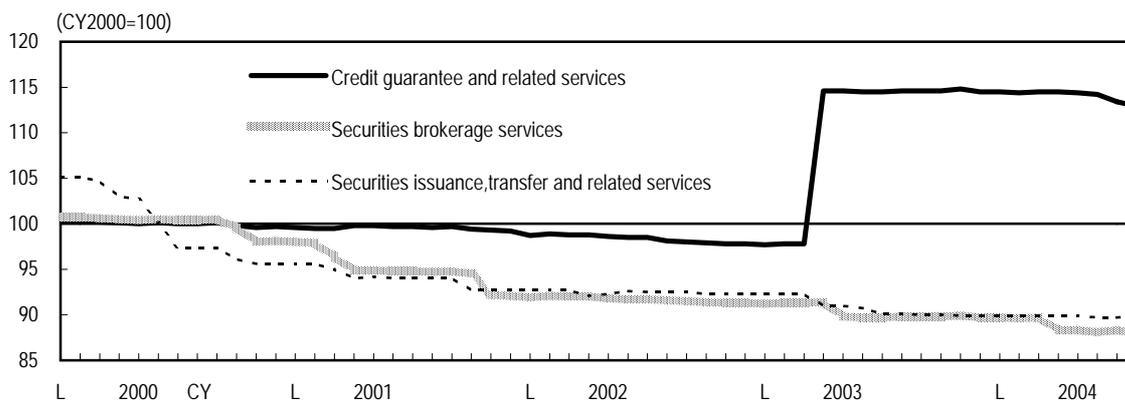

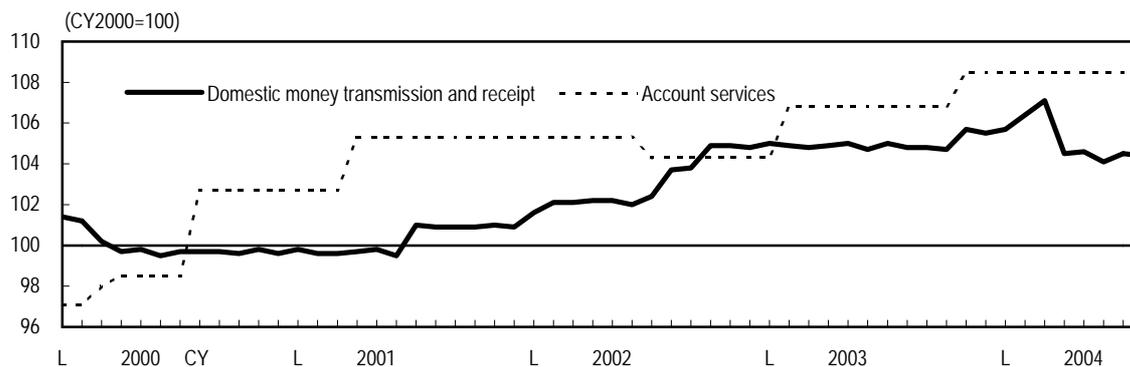

For group “Information services”, some items were divided to better reflect this fast-moving, technologically progressing field. Changes of survey methods of sample prices, such as the introduction of the averaged monthly rate per person, were also adopted to incorporate more accurate price developments. The discrepancy between the new index and the old index is quite clear from the observation. The new index has downward trend, mainly because item “Custom software” was significantly affected by the increasingly competitive environment of the IT industry. The old index, in contrast, stays almost constant from the middle of the year 2001 to the beginning of the year 2003.

Group "Financial services"

(1) Group

(2) Major items

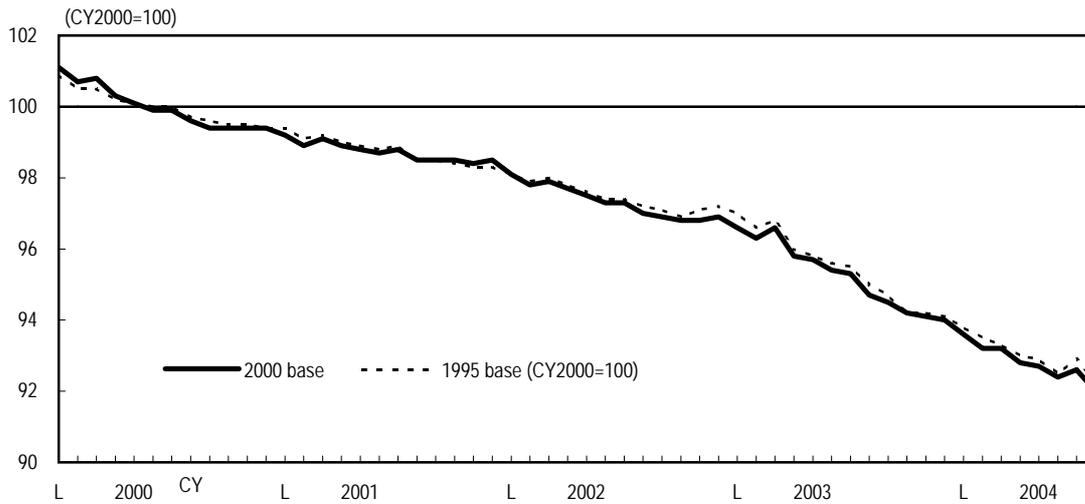

Items included in this group

Item (1995 base)	Item (2000 base)
Remittance services	(C, E) Domestic money transmission and receipt
Finance bills collection services	(N) International money transmission and receipt
Direct debit services	(C, E) Account services
Electronic banking services	(A) Trust business services
Foreign exchange and related services	(S) Securities brokerage services
Stock transfer agency services	(N) Underwriting services
Securities issuance and related services	(S) Securities selling services
Trust business services	(C) Securities issuance, transfer and related services
Underwriting services	(S) Financial agency services
	(S) Custody services
	(S) Credit guarantee and related services

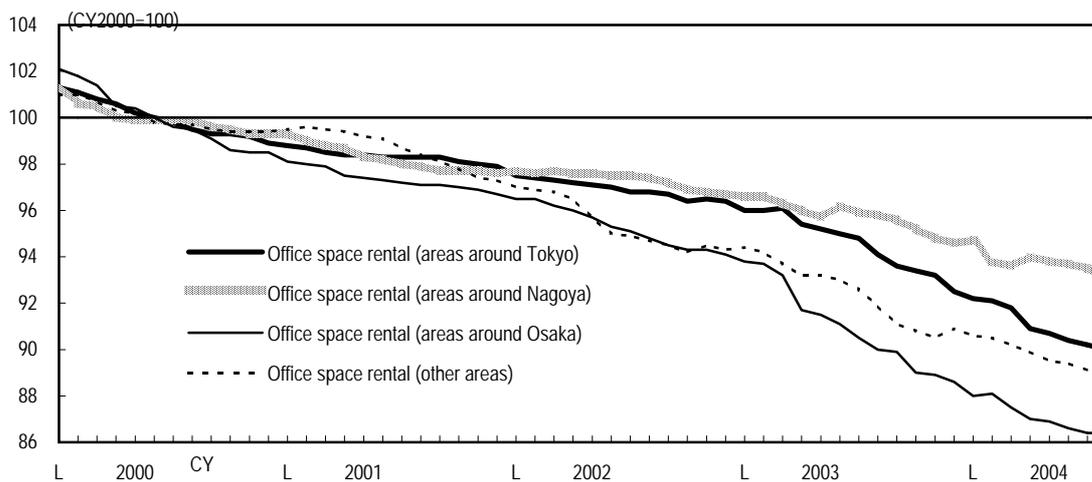

The letter "S" denotes items that have been newly selected, "A" denotes items that have been abolished, "D" denotes items that have been divided, "C" denotes items that been combined, "E" denotes items that have been expanded, and "N" denotes items whose names in Japanese have been changed. Items whose names in English have been changed are shadowed.

Group "Real estate rental"

(1) Group

(2) Major items

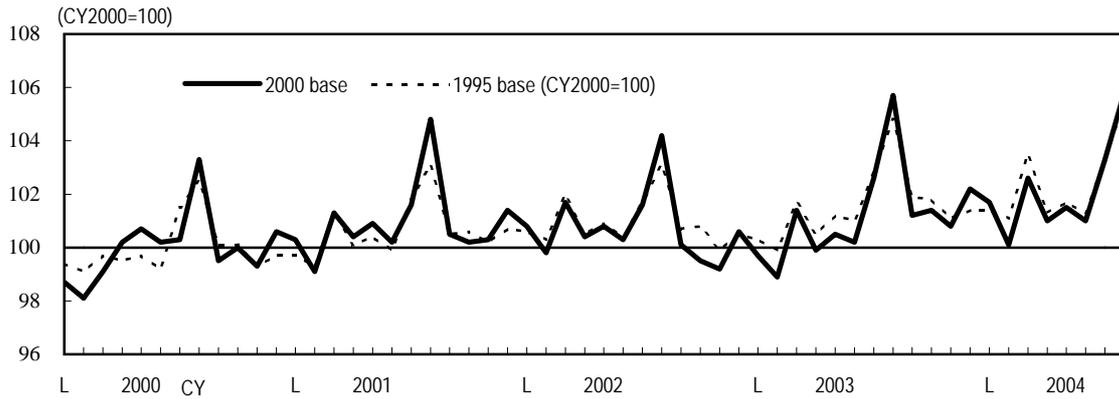

Items included in this group

Item (1995 base)	Item (2000 base)
Office space rental	(D) Office space rental (areas around Tokyo)
	(D) Office space rental (areas around Nagoya)
	(D) Office space rental (areas around Osaka)
	(D) Office space rental (other areas)
Sales space rental	(N) Sales space rental
Hotel rental	(N) Hotel rental
Parking space rental	(N) Parking space rental

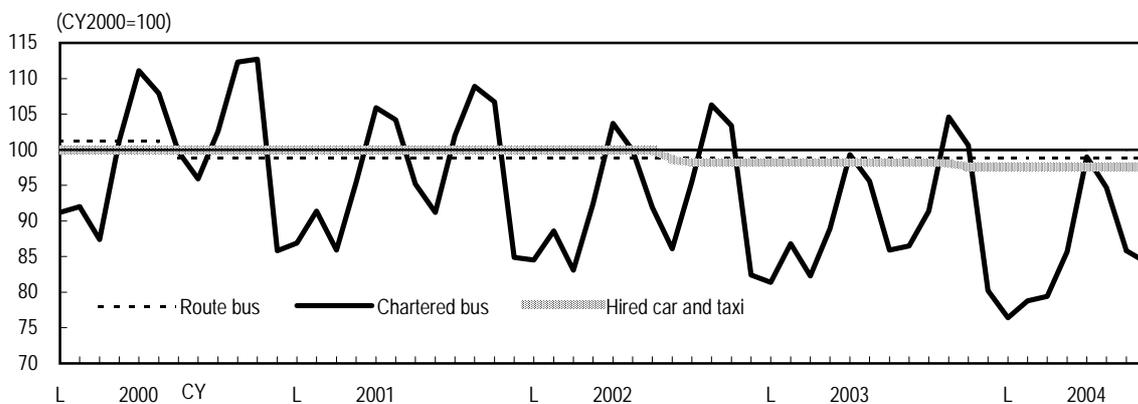

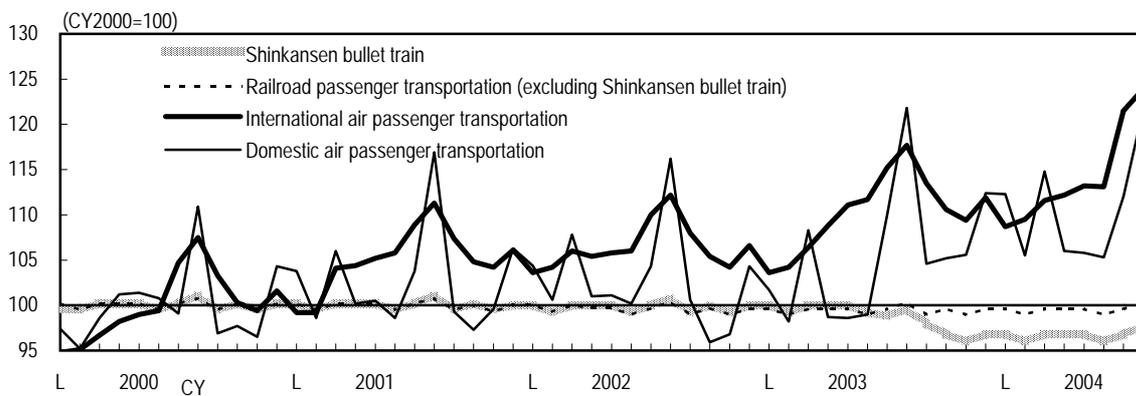

The letter "S" denotes items that have been newly selected, "A" denotes items that have been abolished, "D" denotes items that have been divided, "C" denotes items that have been combined, "E" denotes items that have been expanded, and "N" denotes items whose names in Japanese have been changed. Items whose names in English have been changed are shadowed.

Group "Passenger transportation"

(1) Group

(2) Major items

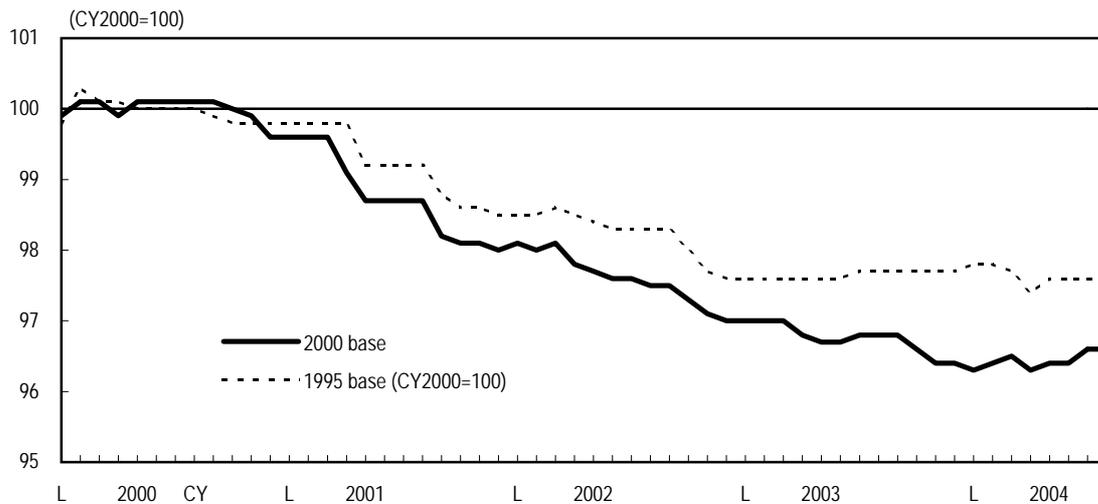

Items included in this group

Item (1995 base)	Item (2000 base)
Railroad passenger transportation	(D) <i>Shinkansen</i> bullet train
Buses	(D) Railroad passenger transportation (excluding <i>Shinkansen</i> bullet train)
Hired cars	(D) Route bus
Taxis	(D) Chartered bus
International air passenger transportation	(C) Hired car and taxi
Domestic air passenger transportation	(N) International air passenger transportation
	(N) Domestic air passenger transportation

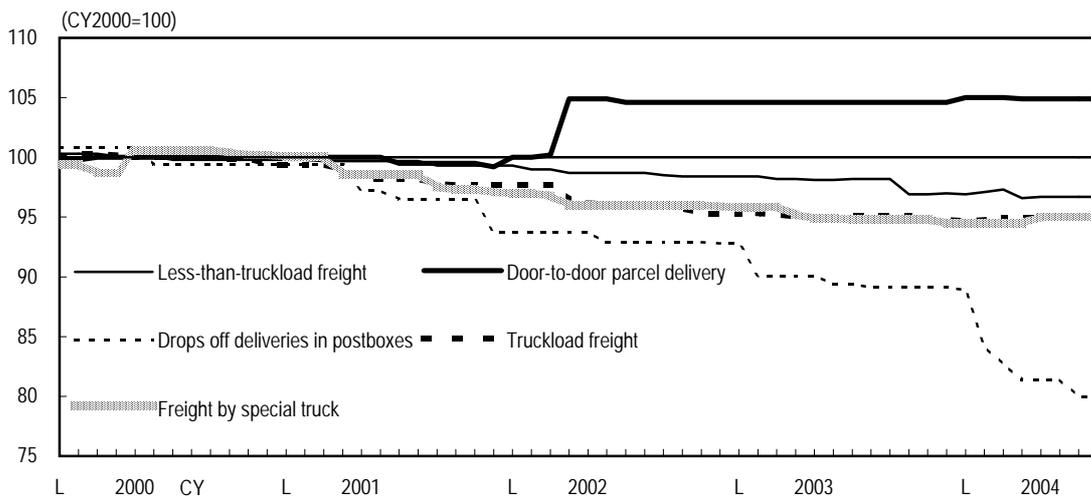

The letter "S" denotes items that have been newly selected, "A" denotes items that have been abolished, "D" denotes items that have been divided, "C" denotes items that been combined, "E" denotes items that have been expanded, and "N" denotes items whose names in Japanese have been changed. Items whose names in English have been changed are shadowed.

Group "Overland freight transportation"

(1) Group

(2) Major items

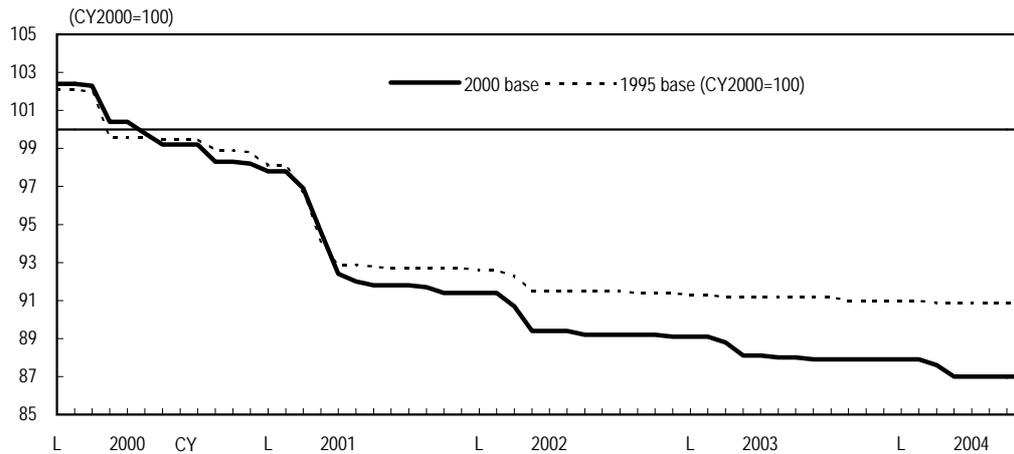

Items included in this group

Item (1995 base)	Item (2000 base)
Railroad freight	(N) Railroad freight
Less-than-truckload freight	(C, D) Less-than-truckload freight
	(C, D) Door-to-door parcel delivery
	(C, D) Drops off deliveries in postboxes
Truckload freight	(C, D) Truckload freight
	(C, D) Freight by special truck

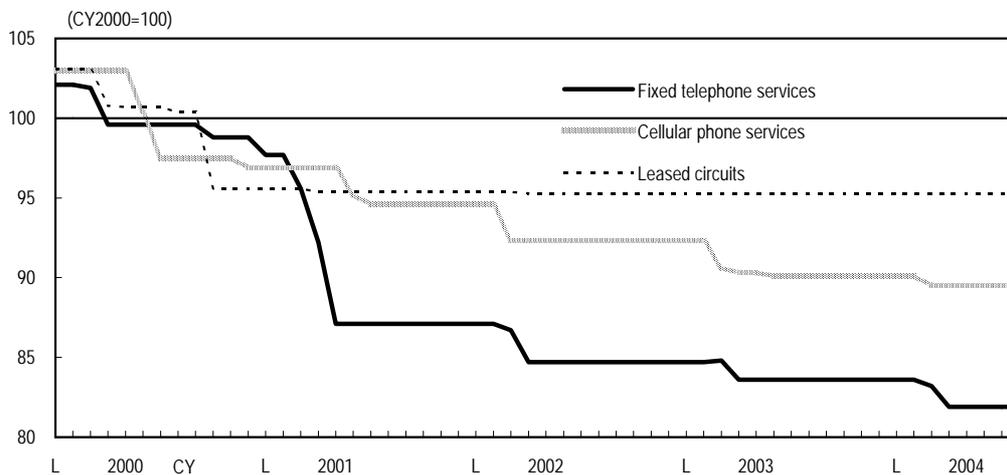

The letter "S" denotes items that have been newly selected, "A" denotes items that have been abolished, "D" denotes items that have been divided, "C" denotes items that been combined, "E" denotes items that have been expanded, and "N" denotes items whose names in Japanese have been changed. Items whose names in English have been changed are shadowed.

Group "Communications services"

(1) Group

(2) Major items

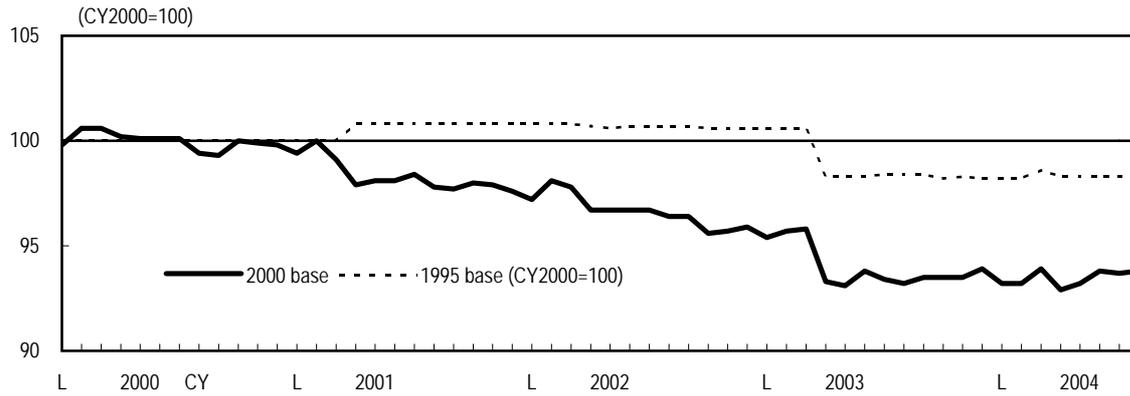

Items included in this group

Item (1995 base)	Item (2000 base)
Letters	Letters
Postcards	Postal cards
Other postal services	Other postal services
Domestic fixed telephone services	(C) Fixed telephone services
International fixed telephone services	(C) Leased circuits
ISDN (Integrated Services Digital Network)	(N) Fixed data transmission services
Data transmission services	Cellular phone services
Domestic leased circuits	PHS(Personal Handyphone System)services
International leased circuits	(A) Pager services
Cellular phone services	Access charges
PHS (Personal Handyphone System) services	
Pager services	
Access charges	

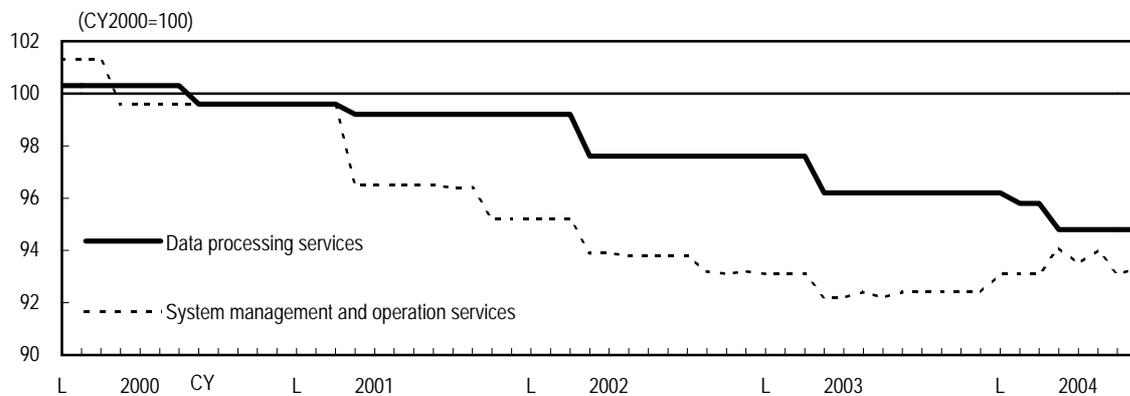

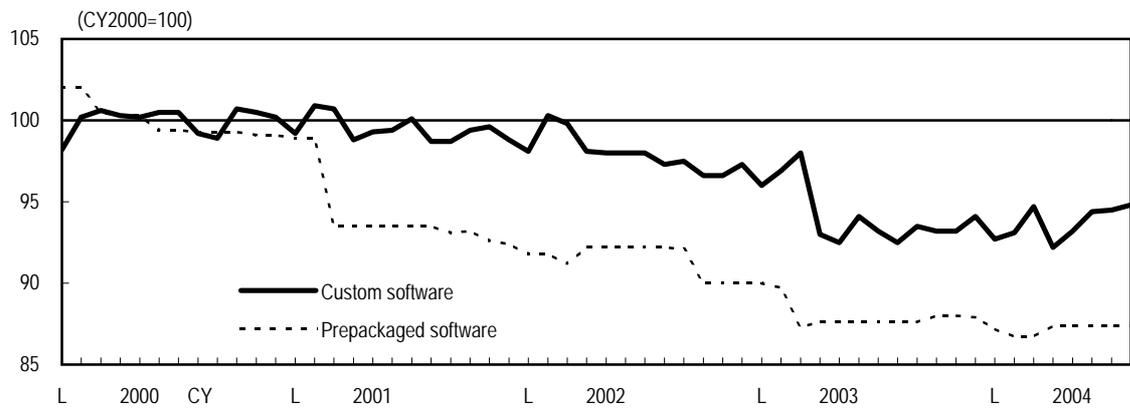

The letter "S" denotes items that have been newly selected, "A" denotes items that have been abolished, "D" denotes items that have been divided, "C" denotes items that been combined, "E" denotes items that have been expanded, and "N" denotes items whose names in Japanese have been changed. Items whose names in English have been changed are shadowed.

Group "Information services"

(1) Group

(2) Major items

Items included in this group

Item (1995 base)	Item (2000 base)
Software development	(D) Custom software
Data processing	(D) Prepackaged software
Providing databases	(D) Data processing services
Market research	(D) System management and operation services
	(N) Database provision services
	Market research

The letter "S" denotes items that have been newly selected, "A" denotes items that have been abolished, "D" denotes items that have been divided, "C" denotes items that been combined, "E" denotes items that have been expanded, and "N" denotes items whose names in Japanese have been changed.

Items whose names in English have been changed are shadowed.

Changes in Groupings and Items

1.Changes in the number of groupings and items

	Major group	Group	Subgroup	Item
1995 base	8	17	39 (+ 7)	102 (+13)
2000 base	8	17	40 (+ 1)	110 (+ 8)

(Notes) This table shows the changes in the number of groupings and items for Basic grouping index.

Figures in parentheses denote the changes in the number from the previous base index.

2.Changes in the number of items by major group

Major group	Group	2000 base	1995 base	Changes					
				Newly selected	Abolished	Divided	Combined	Others	
All items		110	102	+8	+8	-3	+7	-5	+1
Finance and insurance		14	13	+1	+5	-1	0	-1	-2
	Financial services	10	9	+1	+5	-1	0	-1	-2
	Insurance services	4	4	0	0	0	0	0	0
Real estate service		7	4	+3	0	0	+3	0	0
Transportation		29	24	+5	+1	0	+2	-1	+3
	Passenger transportation	7	6	+1	0	0	+2	-1	0

	Broadcasting services	1	1	0	0	0	0	0	0
Advertising services		9	8	+1	+1	0	0	0	0
Informaion services		6	4	+2	0	0	+2	0	0
Leasing and rental		12	13	-1	0	-1	0	0	0
Other services		23	22	+1	+1	0	0	0	0
	Sewage and industrial waste disposal services	2	2	0	0	0	0	0	0
	Motor vehicle and machinery repair and maintenance	2	2	0	0	0	0	0	0
	Professional services	12	12	0	0	0	0	0	0
	Other services not included elsewhere	7	6	+1	+1	0	0	0	0

(Notes) This table shows the changes in the number of items by major group for Basic grouping index.

Figures in Reference index are excluded.

Figures in the column "Others" denote the changes in the number of items which are "Combined and Divided" and "Combined and Expanded".

Changes in Items

1. Newly selected items

Major group	Item
Finance and insurance	Securities brokerage services
	Securities selling services
	Financial agency services
	Custody services
	Credit guarantee and related services
Transportation	Oceangoing ship chartering services
Advertising services	Internet advertising
Other services	Ordinary laundry services

2. Abolished items

Major group	Item
Finance and insurance	Trust business services
Communications and broadcasting services	Pager services
Leasing and rental	Other rentals

3. Divided items

Major group	Item
Real estate services	Office space rental → Office space rental (areas around Tokyo) Office space rental (areas around Nagoya) Office space rental (areas around Osaka) Office space rental (other areas)
Transportation	Railroad passenger transportation → <i>Shinkansen</i> bullet train Railroad passenger transportation(excluding <i>Shinkansen</i> bullet train)
	Buses → Route bus Chartered bus
Information services	Software development → Custom software Prepackaged software
	Data processing → Data processing services System management and operation services

4. Combined items

Major group	Item
Finance and insurance	Stock transfer agency services Securities issuance and related services → Securities issuance, transfer and related services
Transportation	Hired cars Taxis → Hired car and taxi
Communications and broadcasting services	Domestic fixed telephone services International fixed telephone services ISDN (Integrated Services Digital Network) → Fixed telephone services
	Domestic leased circuits International leased circuits → Leased circuits

Changes in Items (continued)

5. Item whose scope is expanded

Major group	Item
Communications and broadcasting services	Cable broadcasting → Broadcasting services

6. Items which are combined and divided

Major group	Item
Transportation	Less-than-truckload freight → Less-than-truckload freight Truckload freight → Door-to-door parcel delivery Drops off deliveries in postboxes Truckload freight Freight by special truck

7. Items which are combined and expanded

Major group	Item
Finance and insurance	Remittance services → Domestic money transmission and receipt
	Finance bills collection services
	Direct debit services → Account services
	Electronic banking services

8. Changes in the name of items

Major group	Item
Finance and insurance	Foreign exchange and related services → International money transmission and receipt
	Underwriting services → Underwriting services
Real estate services	Sales space rental → Sales space rental
	Hotel rental → Hotel rental
	Parking space rental → Parking space rental
	International air passenger transportation → International air passenger transportation
Transportation	Domestic air passenger transportation → Domestic air passenger transportation
	Railroad freight → Railroad freight
	Ocean liners → Ocean liner
	Ocean trampers → Ocean tramper
	Ocean tankers → Ocean tanker
	International air freight → International air freight
	Domestic air freight → Domestic air freight
	Data transmission services → Fixed data transmission services
Advertising services	Television commercials → Television commercials
	Radio commercials → Radio commercials
	Direct mail → Direct mail
Information services	Providing databases → Database provision services
Leasing and rental	Medical equipment leasing → Medical equipment leasing
	Leasing of machinery and equipment for commercial and other services industry → Leasing of machinery and equipment for commercial and other services
	Leasing of machinery for civil engineering and construction → Leasing of machinery for civil engineering and construction
	Rental of machinery for civil engineering and construction → Rental of machinery for civil engineering and construction

(Note) Items whose names in English have been changed are shadowed.

Index Groupings, Classifications, Items and Weights

(Appendix3)

In this table, letters in parentheses denote classifications/items which have been changed in accordance with the revision to the 2000 base Corporate Service Price Index. The letter "S" denotes items that have been newly selected, "A" denotes classifications/items that have been abolished, "D" denotes classifications/items that have been divided, "C" denotes classifications/items that have been combined, "E" denotes classifications/items that have been expanded, and "N" denotes classifications/items whose names in Japanese have been changed. Classifications/items whose names in English have been changed are shadowed. Figures in parentheses indicate the weight of each grouping and item expressed as one-thousandths of All items.

1. Basic grouping index

Major group	Group	Subgroup	Item		
Finance and insurance (50.4)	(N) Financial services (37.3)	(C) Financial services (37.3)	(C,E) Domestic money transmission and receipt (8.0)

			(N) Ocean tanker
		(S) Ship chartering services	(S) Oceangoing ship chartering services
	Air freight transportation	International air freight transportation	(N) International air freight

Index Groupings, Items and Weights (Continued)

2. Reference index

(A) Items included in indexes for Basic grouping

Major group	Item	
(A) Finance and insurance	(A) Banking services (commission rates)	(A) Trust business services
	(A) Securities services (commission rates)	(A) Underwriting services
	(A) Property and casualty insurance services (commission rates)	(A) Property and casualty insurance
		(A) Voluntary motor vehicle insurance
		(A) Compulsory motor vehicle insurance
		(A) Fire insurance
		(A) Marine and other transportation insurance services
(A) Real estate services	(A) Office space rental (by area)	(A) Tokyo area
		(A) Nagoya area
		(A) Osaka area
(A) Miscellaneous services	(A) Industrial waste disposal (by type)	(A) Construction waste disposal
		(A) Sludge disposal
		(A) Liquid disposal
		(A) Other waste disposal

(N) Export corporate service price index

Major group	Item	
Transportation	Export freight transportation (yen basis)	(N) Ocean freight transportation International air freight transportation
	Export freight transportation (contract currency basis)	(N) Ocean freight transportation

(A) Indexes of Domestic supply-demand factors

Item	
(A) Domestic supply-demand factors	(A) Leasing and rental
	(A) Communications and broadcasting
	(A) Real estate services
	(A) General services
	(A) Advertising services
(A) Domestic supply-demand factors: seasonally adjusted figures	(A) Real estate services
	(A) General services
	(A) Advertising services

Newly surveyed services

Major group/group	Newly surveyed services
Item	
Group “Financial services”	
Domestic money transmission and receipt	Money transmission services through inter-bank payment system
Securities brokerage services	Brokerage services for stocks
Underwriting services	Underwriting services for public bonds
Securities selling services	Selling services for investment trust beneficiary certificates
Financial agency services	Agency services, including the payment of principal and interest of bonds, services related to the lending of public funds.
Custody services	Custody services, safe deposit services
Credit guarantee and related services	Guarantee of loans from the bank by Credit Guarantee Corporations, member charges of credit cards
Group “Passenger transportation”	
Route bus	Highway bus, airport bus
Chartered bus	Chartered bus
Group “Overland freight transportation”	
Drops off deliveries in postboxes	Drops off deliveries in postboxes
Freight by special truck	Temporary overland conveyance of air freight
Group “Marine freight transportation”	
Oceangoing ship chartering services	Trip charter (chartering for several months or for one trip)
Group “Warehousing and other transportation services”	
Ordinary warehousing and storage	Storage of documents, magnetic tapes
Group “Communications services”	
Fixed telephone services	Telephone services using the internet protocol network
Cellular phone services	Data transmission services
Major group “Advertising services”	
Internet advertising	Banner advertising, e-mail advertising, etc.
Major Group “Information services”	
Custom software	Provision of packaged solutions
Prepackaged software	Development of Business-oriented prepackaged software.
Data processing services	On-line provision of software application from a centralized, hosted and managed computing environment*
System management and operation services	Management and monitoring services for computer system, management of servers and security systems, provision of security-related services

* This service is called ASP service. Customers carry out their data processing procedures in the computing environment provided.
